I'm considering purchasing an ISOLOOP. Before I do, I'd like to look through a manual on one. AEA wants $20 for a manual. Anyone have one they could photocopy and send me? Reimbursement guarenteed.

Don't underestimate the effectiveness of the much less expensive Radio Shack DSP (about $80). I am extremely happy with it. You can give it a try and if you don't like it, return it, but maybe save enough money for an IF filter.

[...]

If you just need to generate 2600 baud from a PC, (vs external modem), you can generate it directly from most internal modems or standard PC serial ports.

With the correct software, it is only a matter of putting the correct divisor value in the baud rate generator to come out with 2600 (or very very nearly). I don't have the specs with me at work, but if I was to hazzard(!) a guess, it would be something like:

115200 / 2600 => 44.3076

Since you must use an integer divisor, 44 seems best giving some error. Divisor of 44 gives you 2618 baud, with error of 0.69%. Depending on the application, you might be able to live with that. (Check YOUR specs first before using the numbers above- I guessed!)

I havn't actually tried this yet, but it should work with ProComm Plus: Set your ports with the right data bits, stop bits and all that jazz, and set your baud rate to some known value (for debugging if this doesn't work). Then Shell out to DOS, and using DEBUG or a suitably written program, change the divisor to suit the baud rate of choice. When exiting back to ProComm, its my guess that they will not reset the divisor. Just communicate as if all is normal. However, using ALT-P for port settings or ALT-D for dialing will no doubt undo this on you! Mileage on other software will definitely vary!

- * -

Of course if you set the divisor in DEBUG or a short *.ASM program, it is proper and safest to do it with a short program that does a CLI/STI instructions. If you like risks, then that's up to you. The reason for this is that the DLAB bit has to be set to 1 to load the divisor. If a serial interrupt occurs because of line status change or received character, then DLAB is expected to contain bit 0, UNLESS the software imposes the

overhead of enforcing this during the interrupt service routine.
(This extra overhead limits the maximum baud rate supportable, so
this tends NOT to be done).

So CLI, set DLAB=1, load the divisor, set DLAB=0, then STI, and
you will be doing this safely.

- * -

(The reason for this post, mostly:)

Apparently one of the Ham-Sats sporting RUDAK-2 can use a mode
whereby it generates an 1100 baud signal. Any PC based hardware
should be able to adapt to this non-standard baud rate:

115200 / 1100 => 104.7272 ==> say 105 for 1097.14 baud

This is 1100 baud with 0.26% error. If I ever get 70cm band
equipment :-(I'll have more experience on this.

I've heard 1100 baud is a "normal" baud rate in Germany-- is this
fact or fiction?

>

I will say it again Jeff...the ARRL band plans are guidelines. The FCC
dictates what modes are allowable on a band of frequencies. If the
"simplex" frequencies are underutilized, why not use them for additional
repeaters if the existing repeaters are busy or closed?

>>>But recently a _repeater_ with aparrently high coverage in the Los Angeles
>>>area has appeared on 147.555, and QRMs our ragchews in Santa Barbara.

Perhaps the repeater transmitter is not frequency agile. How many
repeater transmitters do you know about change output frequency on
a regular, or irregular basis? Most of us are not crystal controlled
any more and can move to a different frequency at will.

>> 2. Use directional antennas to reduce or eliminate the interference.
>
>Propably won't work. But why should these folks spend the money on
>directional antennas when they're not the cause of the problems?

If it were me, I would not hesitate to change to a different frequency.
I have a few "favorite frequencies" that I use, but if there is another
station on one of those frequencies, I just move to another. What is
so difficult about that?

>
>> 3. Have your QSOs when the repeater is not so active.
>

>Or maybe the repeater should shut down when the simplex channel
>is active.

What makes you think that the repeater users in Los Angeles can even
hear the stations in Santa Barbara? The terrain between the two cities
is not flat and low power 2 meter signals do not travel very far. Why
would they think that anyone was using the frequency?

>
>>>This repeater uses 146.535 as an input. Both 147.555 and 146.535 are listed

>provides? Or are they just duplicating coverage that was duplicated
>by several existing repeaters?

Yes, I know about the other bands. I don't know why the owner(s)
of this repeater put their repeater on 2 meters in the first
place - you will have to ask him or them. I was attempting to
suggest to Leigh that probably the best thing to do for now is
to use another frequency. I suspect that there are lots of
other frequencies available in the Santa Barbara area which are
not being used by a repeater or anyone else. I have heard that
many repeaters in the L.A. area are closed, and are not available
for general use. Perhaps this is an open repeater - but I don't
know.

>
>I suppose you'd think it would be fine to place a repeater in the
>satellite subbands since they're `underutilzed' (how many hours per
>day are they in use?)

No, I don't advocate the use of these frequencies for anything
other than satellite downlinks - however, it is not up to me to
dictate what any frequency is used for either.

It is true that most of the time you will hear no signals in this
portion of the band except if a satellite happens to be above the
horizon and happens to be in a mode so that it is transmitting on
2 meters. In fact, there is a satellite transmitting on 146.55
which used to be a "simplex" frequency. Do you think that we
should make it move to a different frequency in the satellite
downline sub-band? How about the Shuttle? The hams on the Shuttle

also transmit on 146.55.

I suspect that the control operator had only a few choices.
I doubt that he felt that he needed to shut down, and I suspect
that he was not going to or could not move the repeater
transmitter to a different frequency or reduce power either. We
come back around again to the most practical thing which was for
Leigh and his friends to find another frequency to use. At least
that is my opinion and that is what I would have done.

>
>>>I informed the control operator that both 146.535 and 147.555 were intended

>
>> As our bands become more populated,
>
>Which bands, Alan? There's a *huge* amount of spectrum in the UHF
>bands just waiting for operators to move off the crowded 2M band.

I suspect that the reason that 2 meters is so popular is that there
is so much activity on this band. In the metro areas there is
probably someone to talk to just about around the clock. You can
access a repeater just about anywhere in our country, and in most
other countries around the world. In the event of an emergency,
2 meters is the band where you can most likely get help if you
need it.

>
>>flexibility and understanding will
>> become watchwords for dealing with the inevitable interference problems.
>
>If one is not part of the solution then one is the cause. Is this repeater
>owner a solution to interference or a cause?

There is no argument here. The owner of this repeater would be
considered to be a pirate by most of us. My point, again, is that
Leigh and his friends, unfortunately, would be better off finding
another frequency to use. Interference is a fact of life on crowded
bands. If you cannot deal with it, you should find something more
fun to do.

>
>> The ARRL band plans are nothing more than suggestions for utilizing our

>>>every Ham have a right to have his own repeater? With our crowded,
>>>limited VHF spectrum, I believe we all should use FM simplex or SSB
>>>whenever possible.
>
>> The reality is that many, if not most people that are active on 2 meters
>> are using hand-held transceivers with small antennas. Except for close
>> proximity situations, simplex operation is just not as effective or
>> practical as communicating through a repeater system.
>
>And those handhelds at home can use external antennas and communicate
>quite well via simplex.

How about using directional external antennas while we are at it?
I will say it again...except for close proximity situations, simplex
operation using low powered hand held transceivers is not very
effective or practical without a repeater to extend the communication
range.

>
>>>Any comments or suggestions?
>
>Certainly no suggestions from Alan so far.

Not so. Once again, if you don't like what is happening on the
frequency that you wish to use, move - there are plenty of others.
Leigh and his friends could file a complaint with the FCC, but I
suspect that the FCC would tell them that they have no more right
to call 147.555 "their" frequency than the group that put the
repeater on the air. Further, Leigh and his friends would have to
prove that the repeater group was maliciously interfering with
them. Until Leigh complained to the control operator, I suspect

that the repeater group did not even know that they were there.

>
>>>While your area may not currently have such
>>>problems, it may soon happen, due to the tremendous popularity of the
>>>No-Code license.
>
>> Think about using another frequency for your local ragchew group.
>> There must be plenty of space available on a band that is 4 MHz wide.
>
>Only until the entire 4 Mc is filled with repeaters duplicating coverage
>of existing repeaters 10-fold.

If that ever happens, I would think about moving to another band.
Most of our equipment is frequency agile. If we cannot find a clear
frequency to use, then we have to either wait until a frequency
becomes free, or move to a different band. There are downsides to
having a large population of radio amateurs with a finite amount
of spectrum for their use.

>
>Jeff NH6IL

Let us hear your solution to this Jeff. Please don't criticize me.
I am not the person that put this repeater on the air. That was
someone else.

Aloha.

>"Annualizing" that to 24 hours you get over 3200 QSO's. In a 24-hour
>SweepStakes I'd be in the top-ten box with about half that number of
>Q's.

Hans, the bands (at least 20m, where all my /125 contacts came) didn't feel as crowded as during a SS. Your experiece probably comes from the fact that you are one of the few (relative) "rare" ones. During SS, you wouldn't get such a pileup as signing K0HB/125; there are more stations issuing CQs during an SS to spread the QSO load.

If we rack up the total contacts for everyone participating on SS and on the /125 event, I'll wager that the SS would overwhelm the /125 event.

BTW, thanks for the K0HB/125 contact, Hans (1656z, 09/03). Only time one is glad to contact V.D. :-).

Indeed it would! Not only that, only someone who has been through
the sacred initiation rites of ROWH could possibly understand the correct
application of the device, so to simply turn loose a bunch of copies
willy-nilly into the hands of the uninitiated, however well-intentioned,
would risk misapplication and degrade the original intent and meaning.

Jeff, here is another followup to this from another discussion which
is just as applicable to this one:

...stuff deleted...

The only time I have truly been bothered by cross-mode QRM was when
I operated 40m RTTY and a Caribbean phone station came on. We simply QSYed.
No big deal. It is not as if we owned that frequency. We were ragchewing,
it is only a hobby, and it was not as if we were rock bound. Modern
rigs have VFOs.

>gbrush@indy.net

Greg,
The physics involved suggest to me (a poor unfortunate Astrophysics grad
student) during the warm months on 1.2GHz (with leaves on the trees) you
might be lucky to get 100 feet with a rubber duck. Microwave ovens
operate (or operated) near 1.3GHz on the principle that the H2O in the
item to be heated is a strong absorber of energy at that frequency.
Personally I'd go with 6m but that's neither here nor there. Anyway,
1.2GHz will be line of sight, and strongly influenced by any water containing
items in the path (might be an interesting experiment to see how much
the signal strength changes with humidity variations).

This info is probably too late, but the Connection doesn't currently make it much past Monarch Pass (147.285 - Salida) when heading over to Montrose that way. That machine does cover into the San Luis valley pretty well, from what I hear. I do not know the coverage of the G.J. 147.285 repeater to the south towards Montrose, it might make it, but that repeater is not a wide coverage machine.

All Colorado Connection repeaters are continuously linked.

The Montrose repeater (145.145) is linked to 147.12 in Gunnison and 146.82 in Grand Junction. PL of 107 on some of them.

The Vail repeater (146.61) is linked to 146.88 in Glenwood Springs.

Let us know if you had any success getting into Montrose on the Connection...

FOR IMMEDIATE RELEASE

September 9, 1994
CONTACT: AL ALLEN
(908) 495-3246

SHORE AREA HAMFEST -'94

The next Shore Area Hamfest will be held on Sunday October 9th from 8:00 AM to 2:00 PM on the campus of Brookdale Community College in Lincroft, New Jersey. Brookdale is located in Monmouth County on Newman Springs Road (county road 520), just 2.3 miles west of Garden State Parkway exit 109.

This year, full service ham radio suppliers and computer dealers will join over 60 indoor vendors and over 200 outdoor tailgaters in selling new and used Amateur Radio equipment, computers and computer accessories, audio, video, and other assorted electronic equipment.

Indoor vendors will share over 14,000 square feet of indoor selling space in the College gymnasium, while tailgaters will be located in Brookdale's parking lot #7. Breakfast and lunch will be served by College staff in the College Commons starting at 7:30 AM.

The Shore Area Hamfest is expected to attract buyers and sellers from Northern Delaware, Eastern Pennsylvania, Southern New York, and all of New Jersey. This year's event will also include educational forums throughout the day, ARRL VE testing sessions at 9:00 AM, raffles, and prizes. The grand prize for this year's hamfest includes a hot air balloon ride for you and a friend!

Admission is $5 in advance and $6 at the gate. Talk-in will take place on the N2IRO repeater in Middletown, NJ on 145.485 MHz (TX -600 KHz). For more information, please contact Al Allen, K2LG, at (908) 495-3246.

I hope to see you at the Shore Area Hamfest - '94!

>-Tom R. N1OOQ randolph@est.enet.dec.com

Since you are going to the expense and trouble of using 9913, do it right the first time - get the N connectors made for 9913. They should seal properly, and provide a real good weather proof connection since they were designed to do just that with that cable.

Who runs a repeater with a few hundred watts output?? Here in Toledo, OH
I don't think any of the 2 meter repeaters put out more than 50 watts when the
AC voltage is on, most rely on good antennas and sites - not brute force.
When you get your ticket, I bet you'll find a fair number of people running
lots of power, but not many repeaters. The most power I run on VHF is 40W
and it does just fine. To do any better,I need to improve my antenna not
my amp!

Another thought on learning code. Get an all mode VHF rig - 6m or 2m and
practice! The FCC says you are allowed all legal modes on VHF, so get
on 6 and/or 2 with CW at your 2-3 wpm and before you know it, you'll
be at 18-20 wpm.

Dear Hams,

My wife and I are considering home buying in the Santa Clara Valley area, specifically in Campbell, West San Jose, and nearby areas.

I'm very interested in your experiences with antenna laws, assuming no restrictive covenants. Which cities recognize and accept amateur antennas and which ones don't? Is there anything I should specifically ask my real estate broker or seller to make the requirement clear and easy for her to follow?

Can you suggest things I need to look for up front, like power lines located such that they would be a hazard?

I really appreciate all data points, anecdotal or otherwise. Many thanks!

Mike,
You can always (under the current rules) keep your current call when you upgrade. I don't think the FCC will issue you a new license just to get the Tech Plus designation - why not work on the code speed & theory and get the general out of the way??? Just a thought.

The Soundblaster card comes with software that allows easy recording via
the microphone input ... You can set the sample rate, and other
characteristics ... don't see any reason this couldn't be easily done
without any modification, except to run a audio output from a radio to
the input of the Soundblaster card.

This is particularly interesting, since according to the ARRL 8/17/94
(printed) SAREX bulletin, the configuration for STS-64 is "B", which is
FM-voice only; i.e. no packet. Apparently they do have packet capabilities
on board...

|> the signal strength changes with humidity variations).

I hate to confuse theory with the real world but here goes.

I run two 1.2 GHz repeaters in the Bay Area. In this area 1.2 GHz is almost
the same as 440 MHz. In fact there are places in the Bay Area where 1.2 GHz
works better than 440 MHz and other locations where the reverse is true.
But for the most part the two types of systems have similar performance.

Microwave ovens do not operate at 1.3 GHz... They operate in the 2.4 GHz area
(not sure exactly where).

Do trees and water adversly affect 1.2 GHz? Not really. Looking at the
microwave books at the absorbtion of water vapor does not really get
significant until you get to 5 to 10 GHz. At 1.2 GHz is it very minimal.

"Rain Fade" and other folklore about how water affects 1.2 GHz has no basis in
what actually happens.

1.2 GHz is a great band. Lots of interesting people up here, and the band
works great! There is less activity than your local 2 meter repeater, but
that may be a good thing :-)

>money for an IF filter.

It is my understanding that the Radio Shack DSP filter does not have
a noise reduction mode (the noise reduction is merely a product of the
narrow bandwidth) - and that noise reduction is the main feature that
attracts me to an SSB DSP filter....which is really a shame, since
the Radio Shack filter is so inexpensive. (In fact, the Radio Shack
filter has a nonadjustable center frequency for the CW bandwidth that
is far higher than where I want to listen, too bad again....wish they
were a bit more flexible in their designs :-) . If all this is wrong
(a la QST info), I am off to buy one.

Actually, I suspect that the individual technique used (tapes vs computer)
isn't nearly as critical as the mnemonic technique used, eg., associating the
sound of the letter with a picture of the letter, instead of counting dots
and dashes.

JH>> I have heard that for many years there have been no available
JH>> frequency pairs for repeaters on 2 meters in Southern California.
JH>> Therefore, if more repeaters are to be put on the air, some
JH>> underutilized simplex frequencies could be used. Since no one has
JH>> a "right" to a particular frequency, any interference problems that
JH>> arise would have to be dealt with among the affected parties.

JH>Alan - have you ever heard of 1 1/4 meters or the 440 Mc band? Why
JH>should the 2M repeaters encroch upon the valuable simplex freqs?
JH>Are these new 2M repeaters offering coverage that no other repeater
JH>provides? Or are they just duplicating coverage that was duplicated
JH>by several existing repeaters?

Hi Jeff! Just a side that I see many forgetting is the 6 meter band. It
is catching on around NC and the coverage is great! Much better than 2
meters.

JH>Which bands, Alan? There's a *huge* amount of spectrum in the UHF
JH>bands just waiting for operators to move off the crowded 2M band.

That's the case here, too. We've been working on the less populated
bands and it's great not to worry with the unintentional inteference
during band openings, coordination headaches, etc.

JH>>>While your area may not currently have such
JH>>>problems, it may soon happen, due to the tremendous popularity of the
JH>>>No-Code license.

There are no available 2 meter pairs in most of NC now...it's time to
move to other bands to play with repeaters and such. They are a lot of
fun but not the only method of communication. I can understand the
repeater owner not wanting to change bands since it would mean the
liquidation of most of the repeater and starting anew...but he should
have checked into the availability of a 2 meter pair before he bought
the equipment. I got myself into a similar jam in 1992 when I built a 2
meter repeater and found that there were no pairs that fit the plan. The
coordinating body finally coordinated a low altitude/low power pair for
the machine. I would have (and have since!) built it for a different
band had I investigated the situation before hand. I didn't go to the
simplex-based pairs, though. Is his repeater getting a lot of use??

X OLX 2.1 X It's more fun than sex...it's the sunspot index!

Greater than 2 MeV Electron Fluence for 14 SEP is: 9.6E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7776 (S07W79) was
quiet and stable. Little of significance was reported.

Solar activity forecast: solar activity is expected to
persist at very low levels.

The geomagnetic field was at quiet to unsettled levels. The
greater than 2 MeV electron flux was at high levels.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly unsettled the next three days. Nighttime
substorms are likely at high latitudes.

Event probabilities 15 sep-17 sep

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 15 sep-17 sep

A. Middle Latitudes
Active 20/20/20
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

B. High Latitudes
Active 40/40/25
Minor Storm 10/10/05
Major-Severe Storm 05/05/01

HF propagation conditions were normal over all regions.
Normal propagation is expected to continue through 17 September
inclusive, although high and polar latitude paths may
experience periods of minor signal degradation on night-
crossing circuits.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

> manaufacturer? Which on is the best, do everything you will ever want, etc?

I have the JPS NIR-10 and it's great! The only disclaimer is that it
takes a lot of practice.

If you want a cheap way out, the Radio Shack DSP unit is inexpensive, but
I was told by a friend (K4OVK) who tried it side by side with the
NIR-10 that doesn't performe nearly as well. He took the RS one back.

If you decide on the NIR-10 and are patient, go to a big hamfest and have
the JPS people demonstrate it and you'll see what I mean. They're nice
folks too and will probably give you a short course on how to use it
properly.

Good luck in your search...

As I recall from my upgrade in June, you have to specifically check the box asking for "systematic reassignment" of your call sign, and initial next to that box. Presumably to make sure that no one ever loses a treasured call without asking for that to happen.

Jeff,

I believe all these repeater frequency occupation scenarios have all been addressed by the FCC at one time or another. They've given virtual official sanction to the coordinating organizations and for all practical purposes, "coordinated" repeaters own the frequencies they're assigned. All others are pretty much on their own.

I am looking on the behalf of a fellow amature and friend of mine
a pict gif or jpeg, (or what ever) of the head or face of the pinck
panther, the cartoon one thats is on Tv. Irean kk6xa or kk6xb (one is her
husband) is building a rc controled air plane and she is painting it pink
and calling it the "Pink Panther" and think it tould be cuite to have its
face on the tail.

Please send me the picture to me via e-mail (please no uuencoded
ones) or mail her the picture directly to her, you can find her address
in the call book.

In article <Cw0urM.5E9@cbfsb.cb.att.com>, cropley@cbnewsf.cb.att.com (andrew peter.cropley) says:
>
>QUESTION. Can I "ZAP" my pack by leaving on 24 volts for a while??

I would not leave it on for a while. What I would do is give it a shot from a 12V, 20-30 amp power supply for ONE SECOND. That hopefully will bring the cells back in line and they will accept a charge again, albiet fractionally less than they would originally. Of course, if it has been discharged for so long, you may have no choice but to chuck the battery or replace the cells.

>Also curious as to Y the charger steps down to slow / trickle charge
>so quickly??

You probably have a cell that has reversed polarity from overdischarge and is refusing the higher current charge. Your charger senses this and reverts to trickle charge to top off the battery and prevent overcharge damage.

4128. Car warantees and 2-way radio: Summary

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-15 05:33:01 UTC
From: david@bu.edu
Message-ID: <358mad$33i@news.bu.edu>
Source record: 260152

I posted a message some time ago and got several responses [thanks] about dealing with new car dealers. The question was whether installing a 2 meter rig [Icom IC28H in my case] would void any new car warantees.

Well, I ended up buying a Honda Accord LX and was able to get a letter from the dealer stating that there would be no warantee violation with puting in a radio. The dealer had contacted the regional office, and they had no record of problems. The only caveat was the battery, which they felt might be affected [I guess if your short circuiting it or draining it consistently....]. I had the dealer install the direct connection to the battery, which makes them responsible for anything going wrong on that side of the firewall.

Now I just have to figure out how to mount the thing in the car. There is nothing to hook onto under the glove compartment, so I'm going to have to get creative. Any ideas would be appreciated.

Using a HT with a duck on 1.2GHz sounds not such a great idea. Being
less than 10% away from 1.3GHz, near H2O's resonant freq (if the above
is correct that it is or was 1.3GHz for microvave ovens). How selective
is water anyway? Would I "microwave" my head some (especially eyes)
using a HT on 1.2gigs with a duck?

I was at a local hamfest last weekend and I was browsing the
indoor exibits. There was a vendor selling CD ROMS so I purchased
the latest addition of "QRZ". I almost bought one that was labled
"Amateur Videos" but after a close examination, I saw the XXX rating.
At first glance I figured it contained recordings of amateur TV or
related subjects. Boy, was I wrong!

I did find a wealth of information in the second addition of QRZ.
I also own QRZ version 1. I paid $17.00 for version 2 but a friend
purchased a copy the same day at another table for $14.00

Message-ID: <359do1$65t@usenet.INS.CWRU.Edu>
Source record: 260124

I am planning on purchasing a 2m handheld in the near future.
I think it's down to three radios I'm looking at. The Icom IC-T21A,
Icom IC-2GXAT, or the Kenwood TH-22AT. Does anybody have any comments
or experiances (good and/or bad) that could help me make my decision.
I have never owned a handheld or a 2m rig, so I'm new at this.

Thanks in advance. Ray WD8MAI 73'

: Greg,
: The physics involved suggest to me (a poor unfortunate Astrophysics grad
: student) during the warm months on 1.2GHz (with leaves on the trees) you
: might be lucky to get 100 feet with a rubber duck. Microwave ovens
: operate (or operated) near 1.3GHz on the principle that the H2O in the
: item to be heated is a strong absorber of energy at that frequency.
: Personally I'd go with 6m but that's neither here nor there. Anyway,
: 1.2GHz will be line of sight, and strongly influenced by any water containing
: items in the path (might be an interesting experiment to see how much
: the signal strength changes with humidity variations).

I have lots of experience transmitting through trees. Its a little bit
of a factor on 1296/2304, but if you have 20 dB of link margin, you can
usually ignore a stray tree or two. On 10 GHz, trees are a real problem,
though it is possible to blast through them to make 50 mile contacts
(10 GHz CW). My first 2304 contact was through some pretty thick trees
about 100 yards away (contact distance 70 miles). If you can get some
distance between yourself and the trees, it helps a lot.

My DX record in working someone with a 1296 FM handheld is from FN33JC
to someplace in FN24. I'm not sure where he was, but the closest spot
is about 75 miles away.

The Microwave oven principle is *wrong.* You can cook hot dogs just
fine with a 100 watts from a 2 meter transmitter. Check the 1972
QSTs around June--WA1MRF has a garbage can filter/hot dog cooker.
The frequency chosen is a compromise--you need a garbage band--someplace
where people won't complain about interference. Secondly, it has to cook
food all the way through (no raw meat in the middle). Finally, it has
to be easy to contain almost all of the RF (no leaky door seals). Thus,
2.45 GHz is the actual frequency, though you could probably build a
"microwave" oven anywhere from 100 to 4 GHz if cost/size/EMI was no
problem.

Finally, the lowest band with real water absorption problems is 24 GHz.
I make contacts on 10 GHz though rain all the time (I'm in New England).
If you want to see for yourself I plan to be on Mt Greylock this
Saturday--if you really want I can stay around till the
predicted thunderstorms occur in CT and make some contacts in the
soup :-). (Saturday afternoon/evening)

What is a problem is working across high/low pressure boundaries.
I had no problem working a VE2 on 1296 MHz roughly 200 miles away,
even though we were both in a low pressure zone. Couldn't work

the stations south of me in the high pressure zone, though I know
there were at least a dozen stations looking for me.

Message-ID: <9409150845.aa29668@COR5.PICA.ARMY.MIL>
Source record: 260085

There is such a program, a wondoze program. Golden Wave allows
continuous, "circular", recording. The program is available as
shareware on the Simtel mirror sites (oak.oakland.edu, for one).
The file name is something like "GLDWV30.ZIP" or some such thing.
I have a keyboard macro program that allows me to pass keystrokes
to the Golden Wave program. I have things setup such that I simply
click on an icon on the desktop and the recording process starts.
I use a ~850K buffer/file that is opened and to which the current
received audio is written to. This size of buffer allows 75 seconds
of continuous recording at 22kHz, mono mode. I use 22kHz for several
reasons. I use a real stereo and large stereo speakers in the shack.
The recorded sound is a heck of alot better that what comes out of
the tiny speaker on the hood on my IC-765. Secondly, you don't get
aliasing crap when recording CW. I recorded my QSO with 6W6JX
on 160M CW and keep it around to show folks that I really worked
someone outside of the county on 160M :^)

There are other programs out there that allow circular recording.
Look around and you will find something to fit your needs.

They do have a gopher site, I forget how to get there. It's not
very exciting, but not bad for a first try.

>At some point, it'd be nifty if they had an on-line, up to the minute
>way for us to check license statuses, as they entered them into their
>computers. But then this is .gov not .com. Oh well.

Supposedly the FCC will have electronic filing of 610s by the VEC
before the end of the year, they're testing now. A licensee will
be able to get their callsign electronically by bbs (and hopefully
internet) within a week of taking the test.

This was discussed at the recent Hudson ARRL convention.

> The physics involved suggest to me (a poor unfortunate Astrophysics grad
> student) during the warm months on 1.2GHz (with leaves on the trees) you
> might be lucky to get 100 feet with a rubber duck.

The situation is not that bad. There are seasonal variations, but they
are observable starting from UHF TV channels and up.

The signal can travel without too much attenuation a few hundred meters
from the HT through a forest until it has clear line of sight path to
a repeater .

> Microwave ovens
> operate (or operated) near 1.3GHz on the principle that the H2O in the
> item to be heated is a strong absorber of energy at that frequency.

Can you give any references for this strong absorbtion peak. I have
previously heard the same story, but I havent found any references and
thus I think it is an urban legend.

For atmospheric gases I haven't seen any peaks below 10 Ghz. There is
a prominent water vapour peak at 24 GHz (that is why this band was given
to amateurs, as no-one else wanted it).

Are you perhaps confusing with the 21 cm hydrogen line which many radio
astronomers use. This radiation is due to the reversal of spin of the
electron in a hydrogen atom. I doubt that this prosess could absorb a
lot of energy from the RF-field and turn it to heat.

As far as I understand it, microwave ovens are based on dielectric heating.
Similar results can be achieved by applying enough RF anywhere in the upper
UHF range. The fact that there once was 1.3 GHz microwave ovens and that
they currently operate at 2.45 GHz is that there was or there are currently
ISM (Industrial, Scientific, Medical) allocations at these frequences.

> Personally I'd go with 6m but that's neither here nor there. Anyway,
> 1.2GHz will be line of sight, and strongly influenced by any water containing
> items in the path (might be an interesting experiment to see how much
> the signal strength changes with humidity variations).

A more interesting place would be 24 GHz :-)

'Rain fade' has more to do with the fact that the refractive index of the
lower atmosphere changes and this also lowers the appearent 'effective
earth radius'. When there was previously a lot of room between the Fresnel
zone (around the path of the signal) and some obstacles along the path,
when the appearent effective earth radius is decreased, the obstacles

penetrate into the Fresnel zone (or looking at the other way aroiund,
the appearant path drops by a few meters) attenuating the signal.
The same thing happens on VHF, but the signal strength variation is not
so dramatic, as the Fresnel zone is much larger at these frequencies,
so a drop of the appearant path by a few meters do not block the Fresnel
zone so easily.

: their bikes. I'd like to hear about both hand mikes and boom mikes.
: Thanks
Hi Rich, I would suggest you get either a J&M or Cyclecomm. Mind you I have
not used either yet... I am just going by what others are using. The hand
mike has a couple of disadvantages... 1. You should have both hands controlling
the bike (you knew that :^) and 2. Wind noise. Standard mikes are way too
sensitive to use on a bike. Ever heard someone talking mobile on 2M with
the windows rolled down in the car? All reports I have heard about the J&M
are great.. this is the new model 157 as I remember. Some like the Cycle-
Comm and others think they don't hold up as well as the J&M. Both seem to
be priced about the same depending where you see the J&M's (~$159) for the
mike and stereo earphones that go inside the helmet. If you are looking for
ham only (no music) you can get by with the less expensive J&M's at about
(~$129 or less) BUT these don't have their new mike that is more efficient
at cancelling wind noise.

I will be installing one in my helmet this weekend (J&M). I have a bit more
of a problem in that I have a Biefe Modular (one with the swing up chin guard)
and that requires a longer microphone cable. I'll have to cut and splice a
longer mic cord in and deal with an extra loop of cable that will always be
in the way. It's either that or go to an open fact unit and see if I can
make that work.....

Hope that helps.... There is a group that meets on Tuesday afternoons on both
20M and 40M. The 20M group meeta at 2200Z at 14260 usually + because that is
the IOTA frequency and at 2300 on 7.260... this is usually the one I find
myself checking into. Also there is a club in SoCal (L.A.) M.A.R.C. (
Motorcycle Amateur Radio Club) It is at an inconvenient time for most day to
day workers because of the time... currently 1600Pacific Coast time.. most
people are still at work at that time.

Hope this helps some.... sorry I carried on so long.....

Packet: N9KYJ@W9ZMR.IL.USA.NOAM

Topic: SAREX STS-64
Scouting Jamboral this weekend.

SAREX STS-64

The Shuttle Amateur Radio Experiment (SAREX) has taken off
from its launch pad at the Kennedy Space Center in Florida last
Friday an hour and 53 minutes after the original launch time. This
is a six crew mission lasting for nine days will attempt to contact
a few schools across the country and around the world. The licensed
crew are:
Richard . Richards, KB5SIW, Commander
L. Blaine Hammond Jr., KC5HBS, Pilot
Jerry M. Linenger, KC5HBR, Mission Specialist

The scheduled 10 schools are:
Grizzly Hill School, North San Juan, CA USA
The Branson School, Ross, CA USA
Crystal Lake South Elementary, Crystal Lake, IL USA
Morocco Elementary School, Morocco, IN USA
Springfield Plains Elementary, Clarkston, MI USA
Francis Howell North Middle School, Central Square, NY USA
STEP/Star Schools - Young Astronauts, Spokane, WA USA
Dwight D. Eisenhower Middle School, Laurel, MD USA
Middleton Grange School, New Zealand

When the astronauts has time, they will be on the following
frequencies (it is important not to transmit on the downlink
frequency):
Voice downlink (Worldwide): 145.55 MHz
Voice Uplink: 144.92, 144.93, 144.95, 144.97, 144.99 MHz
Voice Uplink (Europe): 144.70, 144.75, 144.80 MHz
Packet Downlink: 144.55 MHz
Packet Uplink: 144.49 MHz
Callsigns: KB5SIW, KC5HBS, and KC5HBR (voice only)
FM Packet call: W5RRR-1 (packet only)

If you happen to hear them on any of these frequencies, you
can receive a nice QSL card from the crew of STS-64 (you do not

need to make contact to receive a QSL card). All you need is to send a SASE to ARRL EAD, STS-64 QSL, 255 Main st., Newington, CT 06111, with the time (in UTC), frequency heard on, and mode (voice or packet. The Nashua Area Radio Club in New Hampshire has volunteered to manage the cards for this mission.

Information received from the American Radio Relay League, SAREX informational Packet.

Scout Jamboral Radio Station

The Great Salt Lake Council (based in Salt Lake City, Utah) is having its bi-annual "Utah Heritage Jamboral" this year on Sept. 16th and 17th. This event draws literally thousands of scouts from throughout the council for a couple of days of great activities. Ham Radio Operators will find a Talk-In on 145.69 MHz. A special event station with K2BSA/7 will be operating from 0000 to 1800 UTC September 17 on the following frequencies:
15 meters 21.395 MHz
20 meters 14.287 MHz
40 meters 7.228 MHz
80 meters 3.870 MHz
Activities will include making contact with other scouts around the world and sending messages to friends and family. Please forward this information to anyone that might be interested; they'd love to talk with other scouters around the world.

That's right. If it were the other way around, and you had to
ask *not* to get a new call, the FCC would doubtless be faced with
a lot of requests for reinstatement of a previous call by those who
failed to read the form completely. This way, the only possible
reason for wanting a call reinstated would be that the applicant
read the form but didn't understand it, which is a pretty weak
reason and the FCC could simply refuse to process a reinstatement.

Wow! It works! I have a BP-84 that's been dying on me. It had gotten to the point (with little warning, matter of fact) where it just would NOT take a charge. I had nearly resigned myself to chucking it and buying a new one (at the usual, totally exhorbitant price). But I just zapped it for a couple seconds (the meter on my Astron surged to about 5A) and bingo! I have a working battery, it seems. (I'll know more after a couple cycles, obviously, but so far, so good.)

Thank you!!

Right now, the Kenwood TH-79A has my vote as the most intriguing choice.
Size, cosmetics, etc., are wonderful. The alpha display would be
just terrific for me: I never what repeater a given freq I've programmed
into my HT corresponds to and the alpha display would fix that. The
only downsides to the 79A are (a) price, i.e., it is a premium unit
and a bit (but depending on your viewpoint, maybe not a lot) more
than other dual banders and (b) a number of folks have noticed that
the memory lockout function (to let you scan the freqs you've programmed
but skip certain freqs) didn't make it into the current product even
though apparently it was planned (it's scratched out by hand in all
the Kenwood sales literature). There's some talk that lockout function
may be added soon, begging the question whether you should buy now
and hope they'll update you free or just wait for the new release (without
of course any assurance there will be one).

4153. GB2RS News 18th September 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-15 18:18:56 UTC
From: dave@llondel.demon.co.uk
Message-ID: <779678336snx@llondel.demon.co.uk>
Source record: 260049
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 18th of September and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

First the headlines:-

The RSGB will be at Earl's Court this week,

and we have news of an RSGB Open Meeting in Bristol.

From next Tuesday the 20th, until Sunday the 25th of September, a huge consumer electronics show, LIVE'94, will be held at Earls Court, in London. This year the RSGB has coordinated an 'Amateur Radio Village' in conjunction with seven other companies. The group of stands will feature all aspects of amateur radio. LIVE 94 covers a wide range of activities including music, broadcasting, computers and photography.

The Society's aim at the show is to introduce the hobby to as many people as possible and well over a hundred thousand visitors are expected at this seven-day event. GB3RS and GB2VHF, will be operational from Earl's Court. Full details can be found in the September RadCom, pages 26 and 88.

Now a reminder of a mis-print in the September edition of Radio Communication. The new twelve-hour book hotline number is 0956 707373 and not as printed. Full details of this new service, which was introduced last week, can be found on page 4 of September's RadCom.

Next Wednesday, the 21st of September, Bradford University will be holding a one day exhibition as part of the Appleton Project. This is an attempt to create a permanent Museum dedicated to the memory of Bradford born Sir Edward Appleton, discoverer of the Ionosphere and one of the 'fathers' of Radar. The exhibition's aim is to further the interest of young people in communications and science.

On display will be GB0APP, operating on 80 and 40 metres, plus VHF Packet, operated by members of Rishworth School Radio Club. UHF operation depends on there being enough local fixed and mobile stations to communicate with on the day. Further details about GB0APP can be obtained from Emma, 2E1BVJ, who is QTHR, or from Rishworth School.

The latest batch of repeater applications forwarded by the RSGB to the Radiocommunications Agency had just one application, a site change for GB3AY, a 2 metre Repeater covering Ayrshire. All applications are processed by the RSGB's Repeater Management Group to whom any enquiries should be addressed. As usual, the Society will keep repeater keepers

informed of progress by distributing the RA's monthly progress reports.

An RSGB Regional Meeting takes place on Saturday the 22nd of October in Bristol. The doors open at 12.30pm, when light refreshments will be available, and the meeting commences at 2pm. Members of the RSGB Council will be in attendance plus representatives of HQ. Full details will appear in the October edition of RadCom which is scheduled to be posted to all RSGB members during this week.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Malaysia, GM0DEQ will be active as 9M2/GM0DEQ or 9M6/GM0DEQ as appropriate, from several Islands, from today Sunday the 18th until Sunday the 2nd of October using mainly CW, with some SSB.

And from Nepal, G4SSC hopes to be active as 9N1SC from now until the 14th October. Check 21.100MHz at 1000 UTC, 14.150MHz at 1500 UTC and 10.150MHz from 2200 to 2400 UTC.

Next, the Rally news and we know of no events for today, Sunday the 18th of September. However we know of four events for next Sunday the 25th of September. These rallies are definitely happening, despite a published report to the contrary.

The Harlow Amateur Radio and Computer Show is to be held at the Harlow Sports Centre. There is easy access off the M11 motorway at junction 7, the A414 and other, routes which will be signposted. Doors open 10.30am. This year's event has extra floor space and more entrances will be used. The event features many trade stands and a bring and buy area. Full catering and lounge bar facilities will be available in the complex. Talk-in will be on S22 and SU22 by G6UT. For further details contact Mike, 0850 487863.

The Three Counties Rally is to be held at the Three Counties Show Ground, Malvern. Doors open at 10.30am. The event features a large selection of trade stands, covering radio and computer, a bring and buy stall and four lecture periods on amateur radio topics. The site has catering facilities. Further details from G4PQZ on 0905 773181.

The North Wakefield Radio Club Rally is to be held at the Outwood Grange School, Potovens Lane, Outwood, Wakefield, located just one mile from the M1 and the M62. The event features trade stands covering all the radio and computer interests, local radio groups, a Novice stand and a bring and buy stall. The RSGB Morse Test will be available on demand, subject to the usual fee and the need to bring two passport size photographs. Further details from G4RCG on 0924 362144 or G0EVT on 0924 825443.

The SDX Cluster Support Group (GB7SDX) Junk Sale is to be held at the Community Centre, Maryhill Road, Glasgow. There are facilities for disabled and also ample car parking space. Doors open at 11am. The tea rooms will be open to provide hot/cold drinks and also light snacks.

Talk-in will be on two metres, channel S22. Further details from John, GM0OPS on 041 638 7670 or via packet to GB7SAN.

Finally, a reminder that the Peterborough Radio and Electronics Society, East of England Rally which was to have taken place next weekend is the one event which has been cancelled.

Now for the HF contest news:

Firstly, the rules and dates for the RSGB QRS Cumulative Contests for September and October 1994 have not been published. Anyone requiring a copy of the rules should contact Chris Burbanks on 01602 376441 {Newsreaders: note that we will be introducing the new STD codes (see RadCom, Sept, p7) into GB2RS from this week. The extra '1' is not an error and the codes really do work now}

The CQ WW RTTY DX Contest takes place from 0000 on Saturday the 24th until 2400 on Sunday the 25th on the 3.5 to 28MHz, but not the WARC bands.

Also the Scandinavian Activity SSB Contest takes place from 1500 on Saturday the 24th until 1800 on Sunday the 25th, on 3.5 to 28MHz, but not the WARC bands. See September RadCom page 18 for more information on both of these events.

The RSGB 21/28MHz SSB Contest takes place from 0700 to 1900 UTC on Sunday the 2nd of October. See June RadCom page 82 for full details.

Next some VHF contest news:

The RSGB 144MHz CW Cumulative Contests will take place from 2030 to 2300 local time, on Thursday the 29th of September, on Friday the 14th and Monday the 31st of October. General rules will apply. Use 4422 summary sheet to show scores for each day, and the best three days will be totalled. Please send all logs plus a single 427 cover sheet for entry. Rule 10 applies. There are two sections; the first for single operator or portable entries, and the other for listeners. The Adjudicator is David Johnson, G4DHF, 65 West Street, Bourne, Lincolnshire PE10 9PA.

The RSGB 70MHz Trophy and SWL Contest takes place from 0900 to 1400 UTC on Sunday the 25th of September. There are three sections: Single Operator Fixed, All Others and Listeners. See July Radcom page 82 for further details.

Another RSGB 10GHz Summer Cumulative Contest takes place from 0900 to 2100 UTC next Sunday the 25th. See April's RadCom for details.

Special event stations active this week include:

GB30FYD which will be operated by members of the Scarborough Special Events Group during today, Sunday the 18th. The call is to celebrate the 30th anniversary of RAF Flyingdales. This is the first amateur radio operation from inside the early warning base, which is situated on the North Yorkshire Moors. Operation will be on 80 and 40 metres, CW and SSB

and 2 metres SSB and FM. Further details from Roy, G4SSH whose address is correct in the RSGB Call Book.

GB0THS will be aired during Space Science Day on Tuesday the 20th of September. It will be operated on 80 metres telephony by Novice licensees under supervision, at the Thomas Hardye School, Dorchester. The school's callsigns, GX0VBY and GX7THS, will also be in use. The station is also hoping to access weather satellites and to use slow scan television. If you can offer a sked on SSTV, please telephone the school on 0305 266064.

GB2VK, will be operated by members of the Dragon Amateur Radio Club to commemorate the 76th Anniversary of the first direct messages from Britain to Australia. Activity will be next Thursday the 22nd, from 0001 to 2359 UTC, on CW and SSB, from the site of Marconi's Long Wave Transatlantic Wireless station at Waunfawr, Caernarfon. Contact Dewi, GW0ABL on 0248 713647 for further information.

And now the solar factual data:

The period from the 5th to the 11th of September has seen some slight increase in solar activity with a few B and C class flares, a very small proton event and a considerable increase in magnetic activity. On the 9th, 10th and 11th small flares were reported, the largest being a C8.7/SF which produced a very small Proton event, reaching only 1.2 particle flux units. The daily Sunspot indices have declined considerably and meaned at 59 for the period. Solar flux levels have slightly increased and averaged 88 units. The 90 day flux average on the 11th September was 80 units.

Due to a coronal hole in the sun's northern hemisphere, the geomagnetic Ap indices rose to sub-storm levels by the 7th, reaching 36 units. By the 11th they were declining and were back to just unsettled. The period averaged an Ap of 22 units. The state has been mainly 'nil', but a solar wind warning was reported being up to 400km per second, (normal levels are around 300km per second). This was accompanied by a high electron fluence three orders of magnitude above normal. The daily aa indices, as supplied by the British Geological Survey for the period the 30th of August to the 5th of September, averaged 12.3 nanoTeslas, about K2. The 2nd was a very quiet day with periods down to only 2 nanoTeslas. There was no disturbed day.

The X-Ray flux has declined overall with the period averaging A7.8 units, which is about the level we would expect at this time.

I'll repeat the figures. Spots - 59; Flux - 88; Ap index-22; X-ray flux - A7.8.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon, averaged 7.3MHz, which is an increase on last week's figure. It looks as though the seasonal changes are now beginning to exert their influence.

The 6th was the best day with levels up to 8.1MHz. The darkness hour lows averaged 2.6MHz down on last week, again a sign of the seasonal changes taking place. There have been many periods of Blanketing E lasting up to 5 hours at times, mainly due to the high geomagnetic levels.

I'll repeat the figures. Highs - 7.3MHz; lows - 2.6MHz.

Now the ionospheric data for the north:

We regret that the data from Ekaterinberg is very patchy. Of the data we have, the F2 daytime critical frequencies were about 5.3MHz and the darkness hour lows 2.4MHz. These depressed levels are due to the magnetic storms which were more severe in the north.

I'll repeat the figures: Highs - 5.3MHz; lows - 2.4MHz.

And lastly the solar forecast:

This week, the quietest part of the sun will be looking our way. Solar flux levels are expected to be about the 70's. Geomagnetic activity is expected to be quiet. Ionospheric daytime MUFs in the south are expected to reach 21MHz, with the darkness hour lows being about 12MHz. Northern levels will be down on these, but the expected quiet geomagnetic activity should help somewhat. North/south paths will be the best.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Golf and G7 Tango Romeo series, and Novice calls in the 2 0 Alpha India and 2 1 Delta Kilo series.

--

GB2RS is prepared by the Radio Society of Great Britain and is broadcast in the 80m, 40m, 6m and 2m bands.

Brian Kantor (brian@nothing.ucsd.edu) wrote:
: If your news or mail system isn't putting your proper address into the
: headers, it doesn't belong on the net. Instead of continuing to pollute
: the network with bad software and working around it by putting your
: real address into the body of the message, GET YOUR SOFTWARE FIXED.
: - Brian

Acch! Ptui!

I now digress into a story.

For years I only had access to a, well, less than perfect newsreader.
Among its many other faults, it saw xposted articles as multipostings.
As the net began to grow and groups began to fragment and grow
hierarchies, indiscriminate xposting began to drive me crazy. On
several groups where I was active I began to campaign to limit overly
subdividing groups because of the xposting issue. I got a lot of the
responses like Brian's. "Fix your software you ignorant fool! Get your
braindamaged newsreader off the net!"

Fine. The only problem is that, like a lot of folks on the net I had
little control over my access and the software that was available. Many
of us were, in fact, doing everything we could to convince the powers
that be to improve our situation but it ultimately took years to effect
change. And even today with a better newsreader I still think
over-subdividing and the resultant excessive xposting is a "bad thing".
Email from other readers showed that many other users were in similar
situations.

Now someone else asks the group a simple favor. A gateway somewhere strips
valid email addresses or passes strange ones. Replys are not automated.
Please add your valid email address to your signature.

Such a little thing. Such a reasonable request. So easy to do. Why
not just do it?

If you want to be constructive and suggest changes fine. If you even
want to vent a little and complain about the proliferation of poor
software out there as the net expands and links all over the place,
again fine. But good grief, be a bit more tolerant of the *people*
who have to live with some of the software problems and are asking for
simple favors to help them work around them.

Scott - who's *always* added his valid email address in his sig because
mailer problems have been around as long as the net has. It used to be
a lot worse folks!

With all due respect to the fine job the gentlefolk maintaining the list do it is hardly the solution to this problem. A valid address in a sig takes up a few *bytes* of space. Absolute noise compared to the rest of the traffic. Hardly a bandwidth issue.

BTW, look up my call in the latest "Hams on Usenet" list and you'll see one of the problems. I have no idea who the gentleman is whose name is attached to my call. I have been told that the scripts that generate the list are fairly complex, and hardly infallable. The list is a terrific service and my hat's off to the folks that maintain it, but it is not the answer to providing valid mail addresses on a day-to-day basis.

Not applicable at all. If Kok had said he was operating CW in
the US CW-only subband and a US SSB station come on the air and clobbered
him then I would agree there's a similarity with the current thread.

Suppose I decided to place a 2M beacon on the input of a repeater
because the beacon subband is all filled up. That wouldn't be
very nice now would it?

Where can I find a circuit that interfaces the Yaesu FT-1000 to the RS-232 port on my computer? Also, what (good) software is available to perform logging, monitoring packet dx spots, and controlling the FT-1000 and the PK-232? I know that Yaesu sells interfacing hardware.

==========
Ray: Just wondering, but did you consider the Radio Shack HTX-202?

PL, CTCSS, DTMF, 16 memories, 5 DTMF memories, hi/lo power, comes with charger & NiCad pack & alkaline AA cell pack. Since it can't receive out of band, it doesn't get a lot of intermod (extraneous signals screwing up your amateur band listening).

It works great with packet, takes Icom speaker-mics (I don't like the RS speaker-mic), and SOME Icom battery packs as well, I think. Never tried it.

Puts out nearly 7 W when supplied with 13.8 VDC power. Oh yeah, it takes a drop onto concrete pretty well (both times) :-]

And it is on sale right now (at least in Northern NJ) for $199.95. Regularly $260.00.

I'm thinking of buying another one.

Discussion of using 9913 coax outdoors:

>9913 is great coax if you are going to use it in straight runs, it will
>not take undo flexing such as being used on a rotor though. And one of
>the drawbacks of 9913 it is subject to contamination because of the air
>dielectric.

Discussion continues concerning getting water inside and talks about
trying to pack in sealant...

Am I missing something here? I use 9913 outside in the Portland area
as well over on the Oregon coast. As far as I can tell no problems
with water. I just use standard silver plated coax fittings soldered
in place. I wrap the connections well with a couple layers of black
tape and then a few good coats of "Scotch Coat". No problems so
far. On the tower I did switch to some more flexible coax when I
get up to the rotor height.

As far as I can tell from my experience just use Scotch Coat over tape
(far more convenient than the coax seal tar-like substance) and there
is no problem with 9913. If something more needs to be done please
let me know.

|>

Yep, the low noise floor on this band is a big plus. I don't play the Grid Square Game, but my personal best with a Kenwood TH-55AT 1.2GHz handheld was on Field Day a couple of years ago, when I was standing in Palisades Park in Santa Monica, and talked with a guy on Santiago Peak, down in Orange County, on his mobile. He was fixing one of 18 intertied repeaters, all on 1.2GHz, that we have here in SoCal. I had one of those handy-dandy Comet 4-element Yagis on my handheld. It's a special deal for 1.2 that attaches right to the BNC connector on your handy, and gives you like 12dB of gain. You'd better use a speaker-mike with one of these, though.

I was totally impressed.

>I would like to offer my shack to some scouts to use. I understand it's
>sometime in October. Any Ideas?

RM>Thanks!

RM>Russ Starksen - N0MRR

Hi om Russ

JOTA i always the 3rd whole weekend of October this year it's October
15 - 16. In Denmark we have to be signed up as a JAMBOREE-stn. Ask
your FCC for the rules.

Rules are that scouts under supervision of licensed hams may exchange
names, scout experiences and so on. Normally their shyness will limit
the rest!

I'll be working from OZ5EDR/J (Copenhagen Ham radio Club) and we will
be QRV on all HF bands mainly 80 and 20 meters. We will also try to
work the RS12/13 satellite. Try us on 14.325 Saturday at 9.30 UTC

hpe cu on JOTA dr om Russ

Vy 73 de OZ1IVA, Lars Harbo

(I saw your mail on Graham's Email-account - (Thanks Graham!), You can
reply to me directly at LH@ms.data.fls.dk if you need further info)

DX Bulletin 57 ARLD057
From ARRL Headquarters
Newington CT September 15, 1994
To all radio amateurs

SB DX ARL ARLD057
ARLD057 DX news

The items in this week's bulletin are courtesy of Chod, VP2ML, Tedd, KB8NW, Joe, NJ1Q, the Ohio/Penn DX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST. Thanks.

SOUTHERN SUDAN. John, PA3CXC, will be on the air from Monday, September 19, to Friday the 23rd, with an emphasis on working west coast US stations. He then moves on to Angola for two months. John prefers CW at around 25 kHz up.

EUROPA UPDATE. FR5HG/E continues to be very active, especially on 40 meter CW. The operator has also been checking into the French DX Net. This operator sends very fast CW and could possibly be a professional radio operator. Michel, FR5HG, plans to sign /E for a 45 day stay. Activity will include CW, SSB and RTTY. QSL via F6FNU.

SOUTH GEORGIA ISLAND DXPEDITION UPDATE. Vince, K5VT, has joined the team of operators which includes WA3YVN and WA4VQD. The group will operate three HF stations, all bands, CW, SSB and RTTY. Word has it that they are well equipped for low and WARC band operation. Equipment was put aboard the Research Vessel ABEL J in June and is expected to arrive in the Falklands around October 8. The team will arrive in the Falklands on December 23 and plan to operate the low bands and the WARC bands for about five days while awaiting departure for SGI.

FEDERATED STATES OF MICRONESIA. Kazu, JA0VSH, and his wife Miyuki, JG0PBJ, will be on the air from Pohnpei October 1 to 10 signing V63KZ and V63MP, respectively. Listen for them on CW and SSB on 160 through 10 meters. During their evening hours, only CW will be used. Miyuki is a very new DXer, so please be patient. QSL via CBA

or the JARL bureau.

LAOS. Gaby, XE2GV, is expected to be active soon as XW8KPL. His length of stay is unknown. Listen for him on 20 and 40 meters, SSB only.

ZAMBIA. Brian, 9J2BO, has been active signing 9I30ZIN, as Zambians celebrate 30 years of independence.

ANGOLA. Kjell, SM7DZZ, will sign D2ZZ starting September 22 for about 10 days. He prefers CW and the low bands. Sometime around the middle of October, Kjell will be on from Namibia as V51/SM7DZZ. And later this year he will be return to Mozambique to operate as C91Z. QSL via his CBA.

NAMIBIA. Pete, N0AFW, will be heading up a group of five operators to be active in the CQ WW SSB Contest. They will arrive on October 24 and depart on November 6. Operators include N9NS, AH9C, WA0PUJ, NH6UY and host V51GB. The contest callsign will be V59T, and outside the contest the operators will use their own call signs /V51. Some satellite gear will be brought along. QSL all via WA2FIJ.

HONDURAS. Ernesto, HR1ERL, will be signing HQ1T for the next two months and will be active on several nets. QSL via HR1FC.

CAYMAN ISLANDS. Mark, N7MCA, and Ron, WJ7R, will be active as ZF2MC in the CQ WW SSB Contest October 29 and 30. Outside of contest hours, ZF2MC will operate mostly SSB on the low bands and ZF2RV will be on CW. There is a chance of some RTTY and AMTOR operating. QSL ZF2RV/ZF8 via WJ7R and ZF2MC/ZF8 via N7MCA. Also look for ZF2JI CQ WW SSB Contest by John, K4IIF. QSL via KG6AR.

QSLING NOTE. K1FL wants all to know that he is not, repeat not the QSL manager for station ST0ST. The ARRL Outgoing QSL bureau has no route information on cards bound for ST0ST.

THIS WEEKEND ON THE RADIO. The eighth ARRL 10 GHz Cumulative Contest runs from 8 am to 8 pm local time Saturday and Sunday. Exchange 6 digit Maidenhead Locators. For full contest rules, see page 94 of June QST.

The phone portion of the North American Sprint, sponsored by the National Contest Journal, runs from 0000z to 0400z September 18. This sprint is only on 80, 40 and 20 meters. See page 101 in August QST for more info.

Amen! 100 percent agreement. News software has been around for quite
some time. There is no excuse for not having it working by now.

Eric-

I thought the Radio Shack unit was cheap enough to try. After playing with it for several days, I decided there was little advantage in using it.

I was very impressed at how well it can take out a heterodyne. Then, I noticed that it would also take out the voice of a person who talked in a monotone!

I suspect the Radio Shack DSP program could be revised, if someone familiar with them were to take it on as a project. By using better algorithms, wouldn't it possible to make it work like the "better" DSPs?

This isn't 9913-specific, but applies to any use of ScotchKote for weather-proofing antenna connections.

Scotchkote itself isn't UV-proof. Left exposed, it will deteriorate and become brittle, fracture, and eventually leak. The proper way to use Scotchkote is to put a layer of tape (not $0.59 hardware store electrical tape, but good tape like Scotch 33+ or Super 88), and then apply a coat of Scotchkote. Before the Scotchkote has completely dried, put down another layer of tape on top of the Scotchkote, stretched tightly as the first, another layer of Scotchkote, and then a final tape wrap. For additional UV protection, you can wrap the final layer of black tape with aluminum foil tape (expensive, but worth it, especially on hard-to-get-to antennas like repeater antennas on tall towers).

As long as you follow good weatherpoofing procedures, there shouldn't be anything special you have to do to weatherproof 9913 cable connections. Those that have had problems with water and 9913 probably haven't been weatherproofing their connections well. The only difference between 9913 and other RG8-sized cable is that once the water is in, it is much easier for it to travel.

For those of you not familiar with Scotchkote, it is a syrupy petroleum product that comes in a can with an applicator brush. You can get it at good electrical supply houses for about $11 a can. While you're there, get some good electrical tape that will stand up to the weather as mentioned above. You can get Scotch 33+ and Scotch 88 in wide rolls, which are even better for weatherproofing as there are less spirals to overlap, hence fewer places for water to get in.

I think I've tried every connector weatherproofing tape, goo, gunk, and paste known to mankind including RTV, CoaxSeal, silicone jelly, tape, heatshrink, butyl tape, etc. and by far have had the best (flawless) results with good tape and Scotchkote.

```
--- SOLAR TERRESTRIAL FORECAST AND REVIEW ---
September 16 to September 25, 1994

Report Released by Solar Terrestrial Dispatch
P.O. Box 357, Stirling, Alberta, Canada
T0K 2E0
Accessible BBS System: (403) 756-3008
SKYCOM Software Announcement: (403) 756-2386

---------

** IMPORTANT SOFTWARE DISTRIBUTION ANNOUNCEMENT **

The Solar Terrestrial Dispatch is seeking individuals who are interested
in helping us redistribute and market the line of software products we
have developed. Specifically, we will shortly permit authorized
individuals to RESELL and distribute the following:

* BCAST Solar and Geophysical Database Management Software.
Contains all of the utilities necessary to use the Extended
Database below. Also contains a large limited database of
solar and geophysical data from 04 Sep 1991 to the 1993 with
the ability to track solar and geophysical information to
the present date. A powerful solar cycle analyst.

* Extended Database of Solar and Geophysical Data.
Contains Sunspot numbers from 1818 to 1993, solar flux
values from 1947 to 1993, and geomagnetic data from 1932
to 1993. Ideal for those studying solar cycles and related
statistics on solar or geomagnetic storms.

* Professional Dynamic Auroral Oval Simulation Software.
Determine when and where to look to see auroral activity.
Simulates the position and appearance of auroral activity
from any location on the Earth. Also simulates the appearance
and location of the Sun and Moon and comes with an extensive
database of auroral activity sightings.

* SKYCOM HF Ionospheric Signal Analyst Propagation Software.
A sophisticated and powerful high-frequency propagation
program. Ideal for radio communicators or listeners,
commercial broadcasters, educators, and anyone else interested
in radio propagation. Produce broadcast coverage maps, global
maps of maximum usable frequencies, maps showing the proximity
of signal paths to the auroral zones, and MUCH more.
Ray-trace signals between any two paths. Produce an all-band
```

spectrum analysis showing what bands or frequencies to use at
specific times of the day, what transmission elevation angles
to use, modes of communication, magnitude of multipathing, and
MUCH more than is possible to list here. SKYCOM outranks most
other propagation programs in features, power, and
flexibility.

Combined, this software normally sells for $360.00.

Those who participate will be able to purchase ALL of the above software
for only $80.00 U.S. (a savings of over 77%), and resell it to others
following our distribution plan. Participants could make very healthy
profits.

There are no special personal requirements to become authorized. Anyone
can participate. To find out how, send a request for more information to:
Oler@Ultrix.Uleth.CA or to: COler@Solar.Stanford.Edu along with your
postal mailing address. We will send the required information to you
through postal mail.

I am the proud (and VERY happy) owner of a new Icom IC-281H mobile rig. This is the 2m rig, with 440 receive. According to the specs, I see that the version available in Italy is "opened up" (136-174 Mhz and 400-479 Mhz).

Does anyone have the mods to be able to open up this radio?? Would greatly appreciate it. Thanks!!

Message-ID: <191_9409201245@psybbs.durham.nc.us>
Source record: 259836

Can someone help with a satellite question...I read that there are satellites that operate on FM (up on 440 and down on 2 meters). I have a couple of crystal rigs and would like to buy crystals and a pair of "eggbeater" antennas (so as not to be bothered with tracking) to put a dedicated budget _get_my_feet_wet_in_the_satellites_ station on the air. Can anyone give me the up/down-link frequencies for these sats and their names? I remember reading this somewhere and it seems that they had non-standard operating frequencies like 145.987 down and 432.657 up (I'm sure that isn't even close but just an example). Tnx de WB4IUY

>assigned. All others are pretty much on their own.

But the original poster said that the coordinating body is under
reorganization and this repeater, operating on two simplex freqs,
might not have been coordinated.

I just don't believe it is a good trend for new repeaters to be
placed on what might appear to be unused simplex frequencies. We
should be encouraging more simplex operation on 2M to lessen the
congestion. Why broadcast over 100's or 1000's of square miles of
area if you're only talking to someone 5 miles from you?

I recommend that all 2M users who have radios capable of scanning
enter a local simplex frequency in one of your memories, and
get active or form a local simplex net. As I've said before,
it's a shame to be dependent upon someone else's radio (i.e. the
repeater) to enjoy your own radio.

SO>73,
SO> Stanley, KC4DPC

HI Stanley! Do you list beacons on other bands? I have a couple of
questions...Who do I coordinate a beacon freq with? Do I use SERA here
in NC for this? I have a 10GHZ 100mw point source and a possible high
altitude site to put a 10 ghz beacon up. I would also be interested in
maybe putting up a beacon on other bands including 24 ghz, but don't
know who lists/coordinates them. Tnx es 73 de WB4IUY

G>What is the best software out that I can study for my Tech. licence??

Here's what got me though the Technician Test:

Novice/Technician Class Manager
General Class Manager
Advanced Class Manager
Extra Class Manager

FEATURES:

- Simple, intuitive system for preparing for Ham License Examinations
- Perfect tool for Volunteer Examiners for creating tests
- Manages entire question pool
- Begin reviewing at any question
- Review questions sequentially or randomly
- Shuffle answers for each question if desired
- Take a test from randomly chosen questions (within the guidelines of the FCC testing criteria)
- Full set of options for customizing tests, including a Test Design Screen
- Print complete tests, along with answer sheets and score key
- Save tests to disk for later use
- Study assist screen tells you what areas you need to study after taking a test
- Pop-up on-screen calculator
- Automatically "remove" a question from the "question card deck" when answered correctly, if desired
- Manually remove any question from the "deck" at any time
- Reinsert into the "deck" any previously removed question
- Start review all over by putting all "cards" back into the deck
- Show answers always or only after an attempt at the answer has been made
- Saves option settings, deck, and last question number to disk to "pick up where you left off"
- Print any part of the question pool

Versions available for DOS and WINDOWS

Is the splice done so that the braid is connected around the entire
circumference of the cable? How about sealing it from the elements?
Is heat shrinkable tubing acceptable, or would it be possible to
use some 1/2" PVC tubing with silicon to seal the cable/tubing gap?

From: au831@freenet.buffalo.edu (James B. Laughlan Jr)
Subject: PRB-1 IGNORED!!!
Message-ID: <Cw7BnK.Gs2@freenet.buffalo.edu>
Organization: Buffalo Free-Net
Date: Fri, 16 Sep 1994 02:45:19 GMT

On Monday September 12, the town board of Lewiston, N.Y., a small town
north of Niagara Falls, passed a tower limitation law stating that
any attatched, or freestanding tower erected may not exceed 35 feet in
height and is limited to one tower per acre. But hams are given the
priveledge of having two towers every 20,000 square feet. Several hams
including Jim Laughlan N2ETE (yours truly), Brandy Scrufari WB2DNQ,
Don Burrows KO2J Communications officer for the Niagara County R.A.C.E.S.
attended the public hearing and stated to the board the existance of
FCC document PRB-1 which gives amateur radio stations a complete and
total exemption from any tower law. They also stated that the ruling
has been successfully defended in both state and federal courts. The
response from Councilman Michael Curtis was "ask us for an amendment,
don't sue us". Town attroney Edward Jeand that PRB-1 needed to be looked at closer to see
if he could recommend
the amendment. The board also stated that there was no intention to
restrict hams at all and there needed to be a law on the books to protect
the town after a recent 3 year battle with a local radio station WTOR
which at first proposed to the town to place 3 AM radio towers along
Langdon Road in the Town of Lewiston. There was a long battle only to
have it settled in N.Y.S. Supreme Court in favor of the radio station,
which plans to run 5000 watts directed into Canada after the Canadian
D.O.C. denied him a license. As of this time, Attorney for the town
Edward Jesella is reviewing PRB-1 to see if any changes could be necessary.

If you wish to copy this to send to any Ham Magazine, ARRL, or FCC, you
have my total blessing and permission. Anyone who wishes to leave any
advise or messages, may e-mail me at this address.

GOOD LUCK AND GOOD DX 73'S

JIM LAUGHLAN N2ETE

pouelle@uoft02.utoledo.edu wrote:

: Personally I'd go with 6m but that's neither here nor there. Anyway,
: 1.2GHz will be line of sight, and strongly influenced by any water containing

The noise floor is quite a bit lower at 1280 allowing the receiver to
detect much weaker signals. The local 6 meter repeater is a good example
where the guys all seem to use 100 watt mobiles just to put a scratchy
signal into the repeater from 50 miles away. The same mobiles using the
1280 repeater on the same hill are always full quieting using 10 watts.

I bet a 1280 portable communicates further than a 6meter portable of the
same low power. Rubber Ducks on six ?

1280 penetrates further into buildings and is not prone to pager overload
or the clocks and other oscillators found in computer centers. Well at
least not this year...

Bob

Greater than 2 MeV Electron Fluence for 15 SEP is: 6.3E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. With west limb passage of
Region 7776 (S08W92), the disk is spotless.

Solar activity forecast: solar activity is expected to
remain very low.

The geomagnetic field was quiet. The greater than 2 MeV
electron flux was at high levels.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly unsettled.

Event probabilities 16 sep-18 sep

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

```
SB SAREX @ AMSAT $STS-64.017
STS-64 Eastern R/S Times 09/17

Below are the rise and set times for STS-64 for selected US cities
over the next three days. This data was generated to help hams without
orbit programs to participate in the SAREX activities. Please note
that all times are in UTC.

Rise= time (HH:MM:SS) the Shuttle Orbiter appears at the horizon
Az= Azimuth (true) where the Orbiter will rise.
Maximum= time, azimuth (Az), and elevation (El) of the highest part of
the pass
Set= time and azimuth when the Shuttle descends below the horizon
Orb= the number of this orbit
Rise MET= The Mission Elapsed Time at the rise. Format is DD:HH:MM:SS

SB SAREX @ AMSAT $STS-64.019
STS-64 Western R/S Times 09/17

Below are the rise and set times for STS-64 for selected US cities
over the next three days. This data was generated to help hams without
orbit programs to participate in the SAREX activities. Please note
that all times are in UTC.

Rise= time (HH:MM:SS) the Shuttle Orbiter appears at the horizon
Az= Azimuth (true) where the Orbiter will rise.
Maximum= time, azimuth (Az), and elevation (El) of the highest part of the pass
Set= time and azimuth when the Shuttle descends below the horizon
Orb= the number of this orbit
Rise MET= The Mission Elapsed Time at the rise. Format is DD:HH:MM:SS

>Hmmm. This wouldn't be deliberate interference, would it?

Depends. Who said you knew about the input being there in the first place? After all, it IS a simplex channel. Are you expected to buy a spectrum analyzer and watch the whole band to see if whatever frequency you land on keys a transmitter somewhere else in the band? I think not. Would you tune the band when operating on 52 splx to see if you were keying someone's odd repeater? I sure wouldn't. Hey, did anyone even figure out that split? Where would you come up with something as lame as 1.02mhz shift???

By the way, I was quite impressed by the number of people who responded privately to that statement, saying they agreed, but wouldn't dare say so publicly. I respect their privacy and appreciate their support.

==========

In celebration of the RSGB International HF & IOTA Convention
and the IOTA programme's 30th birthday, the special event
call sign GB301OTA will be used by members of the Chiltern
DX Club (The UK DX Foundation), and by other UK DXers, from
their home stations. The Call will also be used from the
Convention.
The operating schedule is as follows:

SEPTEMBER
Sun 18 G3KMA
Mon 19 G3NUG
Tue 20 GW3JXN
Wed 21 G3KNU
Thu 22 G3PMR
Fri 23 G0HXN
Sat 24 GW4OFQ
Sun 25 G4BUO
Mon 26 G0SWG
Tue 27 G3MCS
Wed 28 G3NOH
Thu 29 G0NYL
Fri 30 G3UOF
OCTOBER
Sat 01 G4RFR (G0OFE)
Sun 02 G4JGV
Mon 03 G3VJP
Tue 04 G0ORH
Wed 05 G3GIQ
Thu 06 G3ZBA
Fri 07 IHFC (G0OPB)
Sat 08 IHFC (G0OPB)
Sun 09 IHFC (G0OPB)
Mon 10 G0KIK
Tue 11 G0CGL
Wed 12 G4YRR
Thu 13 G4PDQ
Fri 14 G3CAQ
Sat 15 G4PFF

QSL arrangements
================
Direct via G3PMR
Bureau to GB301OTA
PLEASE DO NOT QSL VIA THE BUREAU TO G3PMR.

To avoid any confusion, the call sign is:

GB THREE ZERO ONE OSCAR TANGO ALPHA
(I.E. NOT THREE ZERO INDIA)

73 de Alan Jubb, G3PMR
On behalf of The Chiltern DX Club, The UK DX Foundation

>and dashes.

That probably works for people whose imaginations are image oriented.
For those who are not, however, other associative techniques are necessary.
Using myself as an example of the latter group, I can't "see" anything
unless I draw it out by hand. *Then* I can associate the shape with a
concept.

>
>What do y'all recommend? Is there a FAQ on this, or a list?

It depends on local activity. In some parts of the country, 70 cm
is virtually unused (or the activity is mostly "closed"). In other
areas it is hot. Dual banders cost a bit less than two single band
rigs on average, so it's a good idea if you're sure that you'll *use*
both bands. A local amateur's advice is important in making this
decision.

Wideband radios, either dual band or extended receive, are much more
subject to interference and intermod than tight single band radios.
So the performance edge goes to the good single band units. Unfortunately,
those are few today. Other than the Radio Shack HTs, most single band
radios currently on the market have wide receive, so they're no better
than dual band radios in this regard. The needs of a communications
radio and a wideband scanner are diametrically opposed. The current
trend to try to combine both in one unit leads to equipment that does
neither well. Radio Shack deserves praise for realizing this and offering
their tight radios. The *best* handhelds are GE Mastrs and Motorola HT220s,
but that requires you to scrounge and convert one, and that may be a bit
much for a beginner. The performance edge can be rather astonishing,
though, for those accustomed to the Japanese scanners that also happen to
include a transmitter.

Is there a packet pakage for the Mac? I'm looking for the program for a friend. The best way to get me is though email. He is also looking for a fiel that lists call signs on a Mac.

And for me can you tell me the the proper Internet path to send a email over the packet system to a packet user?

>Suppose I decided to place a 2M beacon on the input of a repeater
>because the beacon subband is all filled up. That wouldn't be
>very nice now would it?

More importantly, *that* would be illegal because beacons are *restricted*
to their subband, just as repeaters are restricted to *their* subband.
However, 147.55 *is* in the repeater subband of 2 meters. There is 1 MHz
on 2 meters where repeaters are *not* allowed. Those are the frequencies
where simplex users can operate with assurance a repeater won't be on the
frequency they are using.

The *only* reason there are simplex channels in the upper repeater segment
of the current bandplan is a historical holdover from the days when 2 meter
rigs could only cover a 2 MHz segment of the band. The simplex frequencies
were in the plan so that those poor souls could have a radio that could do
both repeater and simplex operations. Now, 2 meter radios cover the *whole*
band, and that set aside is no longer warranted for that reason.

The other question of whether we *need* more repeaters is a separate
issue. If you believe that repeaters are a common carrier, then we
certainly don't *need* more 2 meter repeaters. However, if you believe,
as the FCC does, that repeaters are private amateur stations, then
they have as much right to be on the air as any other private amateur
station in any other allowed mode.

Shouldn't be. If the system can't tolerate a signal 20 kHz off
channel, then it needs to be fixed. That's the standard channel
spacing in parts of the US (other parts use 15 kHz which *is*
technically challenging).

No reason at all, *if* that's the case. It rarely is, however.
People use repeaters so that they can communicate with a group
of people over wide areas. For example, I'm monitoring the repeater
as I type this. I can't hear *any* of the participants on the
input from this user location because they're scattered over
a 60 mile radius from the repeater, in hilly terrain. I *can*,
however, hear all of them perfectly through the repeater.

The "splice" is done with proper connectors and a coupler. It's nearly
impossible to do a wire to wire splice in coax and still keep the
impedance constant, or keep the cable environmentally sound.

>> - Brian

> Amen! 100 percent agreement. News software has been around for quite
>some time. There is no excuse for not having it working by now.
>
> Alan

I am the original poster of the request that we develop the habit of
embedding our e-mail address into postings. You are correct that a
newsreader should handle the address. Mine does, that's why I
can reply to your endorsement of Brian's little rant.

BUT ...

Postings to rec.radio.* don't only get distributed to you and I and
others who read newsgroups. There are automated services which
collect and compile them each day, and distribute them to mailing lists
as "digests". Most importantly, the "Info-Hams" digest.
These services usually do not preserve the source addresses correctly.
Maybe they "should", but that is not in the control of those who
post, or those who read.

Then, these digests get archived at several ftp sites worldwide, and
their presence is announced on other mailing lists. So your postings
get read by others days or weeks from now.

Finally, these archives are sucked up by shareware vendors and
distributed on CD roms. So you and I are published on CD ROM !!
(Pity we have to remain anonymous.) I have a CD rom at home on which
I have discovered -- to my chagrin -- some of my less well thought out
postings of months and years gone by.

Considering the level of thought many posters put into their comments,
perhaps anonymity is a blessing. But if you have something to say
and you want all to know who posted it, or if you want a response
from as wide a community as possible, you must consider
that the real audience is much larger than those who will see your
posting today using a newsreader.

Congratulations on restoring your BP-84. It will probably give you
quite a bit more service, but like most things, there's a down side.
Once a battery (actually, probably just 1 or 2 cells in the pack) has
required this treatment, it's more likely to need it in the future.
Expect the self-discharge rate to be higher.

Also after you do this to a pack, charge it at a slow rate at least for
the 1st charge. The reason is you have probably been trying to charge
the pack and most of the cells are fully charged already. If you try
to fast charge the pack the already-charged cells will be seriously
overcharged and may be damaged or the charger may get confused and
refuse to charge. If it switches to a trickle rate, that's OK but I
don't know if all chargers do that. Charging even a fully-charged cell
at the 14-16 hr rate while the rejuvenated cell(s) come up to charge
shouldn't hurt.

Looks like the FCC finally has installed a toll-free telephone
number ..... I haven't personally confirmed this, but here is
a message picked up off of Packet radio earlier today (9/16):

==========

Date: 15 Sep 94 17:17
Message #: 15993
BID: <41302_WA4IMZ>
From: KB5ZRV@WA4IMZ
To: ALL@ALLUS
Subject: FCC 800 Number

WB0TAX!F6CNB!F6CNB!WA4IMZ

From: KB5ZRV@WA4IMZ.#SETX.TX.USA.NA
To : ALL@USA

I called the FCC today and was pleasantly surprised when given their new
toll free 800 number.

The new number for FCC Consumer Assistance is 1-800-322-1117

With their new computer that is supposed to speed up application
processing and their new 800 number they are quickly becomming a
class act.

73's de Bruce KB5ZRV

> : Thanks

My strong advice to you is to carry your ht in your pocket, and when you want to communicate, park the bike and use the ht by hand. As a veteran (survivor) of motorcycle mobile operations, it's my opinion that keeping yourself alive on the bike is a full-time job; I found a radio a dangerous distraction. I ride in a high-traffic area, and it takes all my concentration to ride safely; I don't seem to have any attention to spare for schmoozing on the radio. I know lots of folks do this on ham and cb, but I found it much too distracting. Ham radio and motorcycling are both great hobbies, but in my experience, they don't mix. 73, and safe riding...

4212. Newbie Looking For Handheld/Base

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-16 16:05:57 UTC
From: zobkiw@datawatch.com
Message-ID: <zobkiw-1609941105570001@zobkiw.datawatch.com>
Source record: 259982

As someone who is seriously thinking of going for his no-code license to start, I've been looking at different rigs. I live in an apartment and can't really put up a 20ft antenna in our yard. I'd be best off getting a mobile-type unit that I can use in the house, with some simple "inside" antenna. Or, maybe a handheld like the Kenwood TH-79...

My questions are, what is the best thing to get for my purposes? And, how far can I communicate with something like the TH-79? I'd like to be able to talk to people a little farther than the pool at our complex :)

Another question...is it possible for me to pick my own call-letters? My father used to be a HAM (he's been gone for some years) and I would love to take up his old call-letters...sort of as a tribute.

Thanks in advance! Email is appreciated.

>Technician Plus.
>What do y'all recommend?

> Icom IC-T21A, Icom IC-2GXAT, or the Kenwood TH-22AT ?

Cetainly don't overlook the Yeasu single and dual band HT's. Yeasu offers alot of radio for usually less money than Icom or Kenwood. Try before you buy.... check the "user interface" commands on some radios to decide which one is the most logical to use. You don't want an HT that requires you carry an instruction manual. IMHO the newest HT's have gone overboard on useless gimicks and "features".

Everything else being the same, you might also consider a single band HT to simply "get your feet wet" before you spend a bunch of money and decide ham radio is not for you. It's easy to trade radios without losing much of your investment. Attend some local radio club meetings and ask the folks what radios they're using. (then if you have questions you can get direct help)

One more thing... if you buy a used HT, expect the nicads to have "memory failure" and therefore need replacing, adding to your cost.

=========

MONDAY SEPTEMBER 19, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* SAREX SCHOOL CONTACT *
========================
Sal, N9NJF had the pleasure of making a scheduled SAREX contact with Dick, KB5SIW during mission STS-64 on 11-Sep-94 at 23:48 to 23:56 UTC from the Crystal Lake South Elementary School, Crystal Lake, Illinois.

Ed Picha, N9EP reports that the contact went well and solid signals were aquired about 20 seconds after computer-predicted AOS. Six children were chosen to ask questions, and each got to ask 2 questions.

The ground station equipment used to make the contact included a Yaesu FT-736R with Mirage 150 W amp into a KLM-14CX antenna with Landwher preamp mounted on the antenna. A backup configuration consisted of a Motorola SPECTRA, 110 W out to a 5/8 wave vertical antenna at 30 feet.

The antenna was computer controlled with INSTANT TRACK and KC TRACKER. Doppler compensation was accomplished by programming a number of memories in the FT-736 with the appropriate doppler corrected transmit and receive frequencies and switching these memories each minute of the pass. Ed is currently working on some software to perform doppler compensation "automagically" for the FT-736 transceiver, and expects to have it completed shortly.

Ed found that LHCP was superior to RHCP for most of the pass. Some times the difference in received signal strength was as much as 4 S units, even though the antenna in the Shuttle is linearly polarized.

Ed also reports the SAREX contact was a great experience and it was truly rewarding to see the school kids bouncing off the walls when the contact was over. They were REALLY excited!

[Info via Ed Picha, N9EP]

* AMSAT-OSCAR-16 NEWS *
======================
At 0300 UTC on 12-Sep-94, the AO-16 Command Team began to reload the
of the Ramdisk and File Server software on AMSAT-OSCAR-16 after running
without a reload for over 700 days. This "Preventive Maintenance" is
warranted by the accumulation of uncorrectable SEU's (Single Event Upsets)
in the file control structures stored on the ram disk. During the past
year, four uncorrectable SEU's have been recorded in the directory, root
directory and FAT (File Allocation Table) entries of the error logs. In
the past, a crash of the file server software was attributed to these types
of errors. Reloading and running the ram disk software reformats the ram
disk thereby cleaning out all the bad SEU's.

Fortunately these uncorrectable errors have not occurred in the EDAC memory
where the actual spacecraft operational software is run. This allows the
command team to unload and reload a task or tasks with the shortest amount
of file server downtime. The digipeater will be off during this reload and
all stations are requested not to uplink to the satellite during this time.
Thanks in advance for your cooperation.

[Info via Russ Platt, WJ9F, of the AO-16 Command Team]

* LUSAT-OSCAR-19 NEWS *
======================
After a three month period, the file server on the LUSAT-OSCAR-19 satellite
is back in operation. The file server had been out of service since the
spacecraft's on-board computer crashed last May for unknown reasons while
it was over the South Atlantic Anomaly.

An LUSAT command station completed the OBC software reload on Sunday
11-Sep-94 and brought the file server back on line.

[Info via Gustavo, LW2DTZ of AMSAT LU]

* FUJI-OSCAR-20 NEWS *
======================
The FO-20 command team mentioned that digital mode operation of the bird
will be continued for a while because mode switching between digital mode
and analog mode may cause a problem with the onboard command system.

[Info via Kazu Sakamoto, JJ1WTK qga02014@niftyserve.or.jp]

* ITAMSAT-OSCAR-26 NEWS *
========================
After 40 days of idle time, the ITAMSAT spacecraft was switched on by
ground command and a full spacecraft checkout was performed by the control
team. IO-26 was found to be in excellent shape with the battery fully
charged and all critical parameters in a nominal state. Several pieces
of test software were loaded and executed without any problem.

The reason for the delay in bringing IO-26 back on the air was due to the
heavy workload of the control team. Alberto, I2KBD spent some time in
Chile helping the CESAR team, and lightning destroyed the main command
station.

The reload of the IHT code with improved capabilities is scheduled by
the end of September to celebrate IO-26's first year in orbit. Until that
occurs, expect a few more weeks of idle time.

[Info via Alberto, I2KBD, ITAMSAT Mission Director]

* MIR EVA COVERAGE *
====================
John, G7MIZ, in England reports watching live pictures of the latest
extravehicular activity outside the Russian space station Mir on the
morning of 13-Sep-94 at 0630 UTC on the COSMOS 2054 satellite, 10,820 MHz,
loacted at 15 degrees west longitude. Other noted frequencies were
10,925 MHz, and 11,385 MHz. Peak signal times were 0600 and 1800 UTC.

[Info via John, G7MIZ @ GB7OAR.GBR.EU]

> sells interfacing hardware.

The Yaesu CAT System Interface is "FIF-232C".

J-COM / Ramsey also sells an RS-232 interface. Their TC-Y1 will
interface with the FT-1000, and comes with a disk full of software.

I believe MFJ has a similar product to the J-COM / Ramsey version.

If you are a homebrewer, the MAX232 chip and a resistor may be
helpful.

There is much less controller software written for Yaesu than for ICOM
or Kenwood. I was unable to find a package that met my needs, so I
wrote my own.

16/9/94

The following programmes are now available from,

ftp.demon.co.uk /pub/ham/mac

****

ANT RAD PLOT.sea
2K Basic programme plots vertical radiation pattern for dipoles at any
given height.

BROADCAST v2.0.sea
150K Packet program for use with PACSATs.

CODEMASTER v1.34.sea
27K CodeMaster 1.34 - demo version of CodeMaster 2.34 - morse code and ham
theory test application. This version is somewhat functional.

CONTEST DUPER v5.1.sea
70K Checks your contest log for duplicate entries.

CW CHART.sea
3K Copied from Usenet - a morse code (CW) tree chart.

DXCC by Callsign.sea
30K DA which lists all the DXCC countries in order of callsign.

DXCC by Country.sea
30K DA which lists all the DXCC countries.

EZ DOVE v.002.sea
55K EZ Dove decoder (v.002). Appl and Basic source, decodes Dove telemetry
data.de N5KOB.

GRID 1.0.sea
9K Converts longitude/latitude to grid QTH

HF PACK TUTOR.sea
9K Tutoral on HF packet radio - interesting

HAM ART.sea
11K Assorted ham related artwork. ARRL and AR TIFF logo, IC-735 front(MCDW)

ICOM & MACS.sea
1K Info for Mac & ICOM owners looking for software to link'em

IM/Mac v1.0b27z.sea
200K SMTP mailer for use with NET/MAC.

KISS_TLM.sea
50K For decoding KISS data from MICROSATs.

MacContest 4.0.sea
300K The ultimate contest logging program for the Macintosh (System 7 proof). Covers CW/SSB/RTTY modes and all bands from 1.8 MHz to 5.7 GHz. Allows real-time or post contest logging for a wide variety of contests (30 contest include, new ones can be added). Checks for dupes, figures scores instantly. Offers various printouts (sorts per band, alpabetically, labels etc.) Interfaces to TNCs (KAM, PK-232) for CW, RTTY and packet modes. Built in terminal mode and packet DXcluster interface. Interface to Kenwood transceivers for automatic band/mode logging. MacinTalk voice output for real-time logging as well as to ease post-contest entry. Option to capture log in realtime to printer. Option to simultaneously create a save copy of the log to a different file/drive. Timetable showing actual grayline on a world map. (I have the demo version which will allow you to make 50 contacts). MacContest is free but must be personalized to each user
(otherwis it's limited to 50 contacts). To get a copy send a 3.5" diskette and
a SASE to Gerald Eberle, HB9CEY, PO Box 13, CH-4417 Ziefen, Switzerland. Moritz (HB9BLZ) can act as a message forwarder for Gerald.
Moritz' e-mail address is: gysslerm@saturn.kau.roche.com

MacFAX2 v1.1.sea
20K Will allow you to receive WEFAX pictures in your PK-232.

MACMORSE v0.2.sea
30K Another program to learn morse code

MACMININEC v3.13.sea
250K For analyzing antenna disgins,including dipoles, beams, etc etc.

MORSEMAC DA v2.0.sea
17K A program to learn Morse code . It sounds a preset number of characters
randomly choosen. it contains an XCMD written by LX1YZ

MORSE v1.3.sea
20K Morse tutor up to 25wpm, very good.

MAC SHORTWAVE v1.sea
90K Shortwave propagation predictor.

MacSPOC v1.1
188K MacSPOC, flew aboard the Space Shuttle for the third time in

October 1992. MacSPOC keeps users apprised of the Shuttle's current
location on a world map and updates several digital displays, such as

mission elapsed time, in real time.For the past 3 years, the author
has been
uploading daily trajectory updates during Shuttle missions to MacSPOC
users on AppleLink®, America OnLine®, and Internet. After one of
these "checkpoint" updates is downloaded as a MacSPOC document,
it's just a matter of opening it. Users are then placed "in synch"
with the
Shuttle mission to the accuracy of their system clocks.
No data entry is necessary. Details included with docs.

NET/MacStartersKit.sea
500K A complete starters kit for the Mac user interested in trying
TCP/IP.
Includes everything that you will need to get going.

NET/Mac v2.3.39.sea
500K This is a version of TCP/IP. Will allow you to use AX25, NETROM,
FTP,
TELNET and SMTP with packet radio
ORBITTRACK (2 versions)
514K This is one of the best Shareware progarmmes I have ever seen. If
you are interested
in tracking sats you need this. Comes in two versions, one for use
with Macs that have a FPU
processor installed and one which will run without a FPU for those
that don't.

PACKET(1-18).sea
43K Introduction to packet radio - Parts 1 thr 18 by Larry Kenney,
WB9LOZ

PacketTracker 1.04.sea
110K PacketTracker ver 1.04 is a program that monitors packet
activity
and keeps track of what is going on. It draws a graphical map
showing who is talking to who and displays statistics of all current
stations and keeps a running tally of activity. You will be
able to see graphically what stations you can hit directly and which
ones he cannot. For the network manager and BBS operator,
PacketTracker provides extensive insight to the operation of the
local network and problems such as excessive retries on a path. It
also allows for extensive logging of channel utilization and other
pertinate information.
NOTE: This application requires the Apple's Serial Tool from the
Communications Toolbox System 7

PROJECTMAC A1.sea
105K ARRL's Project Mac software - part A1 (These are looking a bit
old now)

PROJECTMAC A2.sea
118K ARRL's Project Mac software - part A2 (These are looking a bit
old now)

PROJECTMAC B1.sea
103K ARRL's Project Mac software - part B1 (These are looking a bit
old now)

PROJECTMAC B2.sea
107K ARRL's Project Mac software - part B2 (These are looking a bit
old now)

QUICKTERM.sea
Another of Gerald Eberle, HB9CEY contest/dx programmes. This one is a
AX25
terminal programme for use with the DX cluster.

RADFAX 09.sea
173K WEFAX programme that uses the mic input on new Mac. No other
hardware required,
just plug output from HF rig into Mac mic socket and away you go.

SAVANT 1.0.2 Demo
185K AX25 packet terminal programme that will work with SoftKISS,
in other words it will allow you to run a Baycom modem on the Mac.
This is now a commerical programme but the demo version will let you
set it up, send a limited number of frames and see it working etc
etc.

SoftKISS 1.8.sea
This will allow the use of dumb modems with the Mac, ie the BayCom
series
of kits.

STARTING IP v3.0.1.sea
14K The Getting Started with (Mac) TCP/IP text file for beginners

SUNTIMER.sea
130K One of Gerald Eberle, HB9CEY contest/dx programmes. Shows
Grayline
on world map, distance, bearing, DXCC callsign lookup table, very
very nice programme.

TALKTERM 1.1.sea
50K For use with DX clusters. If used along with MacinTalk it will
announce
DX spots as they arrive on the cluster.

Various Logs.sea
200K Includes,
FileMaker Log, 5K FileMaker IV document will provide excellent general
logging.
HamLogger, 10K HC stack for logging ham contacts - very nice.
Logging Stacks UK, 100K Keeps all sorts of logs. From contest, to

local directory.
Logging Stacks USA, Same as above but with USA bandplans.
MacLogger, Very nice programme for checking contest entries.
SWL Logger Stack.

Virtuoso v1.4.sea
68K A very nice standalone packet terminal programme for use with any
TNC

World Radio v1.8.sea
260K Radio control programme for Kenwood radios includes,
Kenwood Radio Interface, Station Log Database, World Map Display,
DX Call Sign List, Antenna Rotor Control, Radio Memory List,
UTC Clock Display, very nice.

World Clock Lite.sea
108K What time is it in Alice Springs Australia ? How far away is
London ?
Is it daylight or night time in New York ? Is it night all the way
from here to Cario?
The World Clock desk accessory has the answers to all these questions
and
many, many, more. Looks good to.

ZTerm.sea
263K Comms Terminal programme for the Mac. Nice and easy to use. Comes
with
sound updates.

****
******

HYPERCARD STACKS.

Advanced 2.2.sea
132K HC stack - Ham advanced test.

CHESS-STACK.sea
143K Yep, someone had to do it. HyperCard stack that will allow two
Macs to play chess via packet radio.

DXMAP v1.1.sea
150K Shows grayline in real time, also has a data base of all
callsigns and
will show location and bearing from your QTH on world map. Very nice.
Can
only can only be used with version 2 or higher of Hypercard.

Extra 2.2.sea
127K HC stack - Ham extra test.

FreqValet Demo version.
203K Provides frequencies and DX program info for shortwave radio
listeners. The program databases update automatically at 15, 30, or

60 minute intervals, thus providing a continuous display of
broadcasts on-the-air at any given time in a spreadsheet like
format. Features include sorting of data, scanning, and on-screen
changing of databases. The program will convert Tom Sundstrom's
dBase shorwave broadcast listing to FreqValet format and will do the
same for Shorwave Navigator users. Separate cards are provided for
DX Programs, Ship to Shore, and Utility broadcasts. Computer
control modules are available at extra cost for the Drake R8,
Kenwood R-5000, JRC NRD-525, and NRD-535 receivers.

General 2.2.sea
93K HC stack - Ham general test.

GRAYLINE.MAC.sea
70K HC Shows world grayline in real time.

HyperFT747GX.sea
250K HyperCard that will allow you to control your FT-747 via the
RS232
interface. This stack should be pretty easy to modify to work with
other
transceivers. It also now comes in a coloured version

Mac525B1.1.sea
100K HyperCard stack for controlling the JCR525 radio via the Mac's
RS232 port. Works pretty fast as the scripts are very well written.
Includes
Database of memories.

Mac5351.1.sea
100K HyperCard stack for controlling the JCR535 radio via the Mac's
RS232 port. Works pretty fast as the scripts are very well written.
Includes
Database of memories.

NOVICE 3.2.sea
128K HC stack - Ham novice test.

SSB.sea
500k With this one you can record your own voice, using MacRecorder
or
similar and then at the click of a mouse call CQ, QRZ, etc etc.

Tech 3.3.sea
108K HC stack - Ham tech test.

Trans.Stk v1.0.sea
32K A stack I made for transmission lines, giving attenuation, SWR,
etc

Various Logs.sea
200K Includes, FileMaker Log, 5K FileMaker IV document will provide
excellent general logging. HamLogger, 10K HC stack for logging

ham contacts - very nice. Logging Stacks UK, 100K Keeps all sorts of logs. From contest, to local directory.

Logging Stacks USA, Same as above but with USA bandplans.
MacLogger, Very nice programme for checking contest entries.
SWL Logger Stack.

KQI Control v1.sea
53K Hypercard stack that will allow you to control a Kenwood TS-940S via
it's RS-232 interface. However the author feels that it should work with most
of the Kenwood range of transceivers.

Macnet rouster v 631
Worldwide database of Ham Macintosh users.

Mac To PC.

ZIP.sea
Will allow ZIP or PKZIP files to be exchanged between Macs and PCs.

Hans,

I visited the FCC reading room and spent between 4 and 5 hours reading around 60 or so of the 108 vanity call sign comments and I beg to differ with your assessment that "most (if not all) commenters were supportive of the idea." Instead, virtually all I read that didn't outrightly oppose PR Docket 93-305 assumed predetermined adoption and were commenting to seek special privilege. (e.g. First shot at calls for clubs, lower fees, etc.) Further, there was apparently no scientific poll conducted by anyone, so contrary to what one comment strongly suggested, there is no evidence whatsoever to support claims of a mandate in the amateur community. I inquired of the commenter who made a point of mentioning majority support and the letter to me in response admitted that no scientific poll was conducted, but instead advised that the conclusion was drawn from comments heard on the air, on-line, at club meetings, etc.

Incidentally, although the amendment hadn't been adopted, the FCC published a general fee schedule about a month and a half ago that has the $70 vanity call sign fee listed. There is an "if adopted" disclaimer, but it sounds like a "done deal" to me!

4222. Re: BAYCOM for Macintosh

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-16 18:07:45 UTC
From: tcline@lvld.hp.com
Message-ID: <35cmth$78h@hplvec.lvld.hp.com>
Source record: 260000

David M. Katinsky (dmk@theaetetus.rutgers.edu) wrote:
> Does anyone know if BAYCOM software exists for the Macintosh?

> dmk@noc.rutgers.edu N2RDT
> David M. Katinsky Manager, RUCS/TDNS Operational Research and Services

This may be a little old, but it includes the PacketMac Modem for the Mac ...

Here's what I know about cheap packet systems:

As I understand it:

1. The BAYPAC (model BP-1) (page 140 November 1992 QST, or page 83
November 73, $50) is a small modem that draws its power from the
serial interface. It must be very similar to the TCM3105.ZIP
schematic. (Also see BAYPAC review in December 1992 73)

2. It is just a modem, and therefore requires some software like
BAYCOM running on a PC-compatible to complete the "TNC" system.
The BAYCOM system was reviewed in the December 1991 issue of 73.

Summary of Inexpensive 2m Packet Systems:
---

1. For PC-compatibles:

A. Poor Man's Packet: (the authors are on internet)
I. Page 8 August 1991 73 magazine.
II. Anonymous FTP: helios.tn.cornell.edu (128.84.241.2),
/pub/PMP/pmp11dsk.zip (includes executables, source,
article text, erratta, assembly notes, etc.).

B. BayCom revision 1.50a software and either BAYPAC or use the
TCM3105.ZIP Postscript schematic:
I. Review: December 1991 issue of 73.
II. Anonymous FTP: WSMR-SIMTEL20.ARMY.MIL (192.88.110.20) or
mirror sites like OAK.Oakland.Edu (141.210.10.117)
wuarchive.wustl.edu (128.252.135.4)
ftp.uu.net (137.39.1.9)
nic.funet.fi (128.214.6.100)
src.doc.ic.ac.uk (146.169.3.7)
archie.au (139.130.4.6).

I have used wuarchive.wustl.edu (128.252.135.4):
/mirrors/msdos/packet/tcm3105.zip and
/mirrors/msdos/packet/baycom15.zip
(=BayCom revision 1.50)

The later revision 1.50a is available from ucsd.edu :
/hamradio/packet/baycom/baycom15.zip (168789 bytes)
and also an ENGLISH manual for rev 1.2:
/hamradio/packet/baycom/manual.zip (42424 bytes)

Note: Some older versions of the tcm3105.zip schematic
have 2 R2s. I think the "R2" connected to the
CTS line should be corrected to R3, a 2.2K ohm.

2. For Macintosh:
PacketMac Modem:
Page 8 October 1992 73, and errata page 54 November 1992 73.
(the author's listed internet email (Francis4@apple.com) did
not work, 2-24-93)

3. Commodore 64: I was told:
> Digicom 64 in the August 1986 73 (date ??).
>
> The software is public domain and is usually bundled with a
> "kit," PCB, hard-to-find parts, etc.; from some hams that
> translated the original documentation from the German.
>
> A more-or-less accurate list of the guys that can supply the kit
> is listed in the ARRL publication, "Gateway to Packet Radio."

Notes:
-----

1. I have only used Poor Man's Packet, but hope to try BayCom soon.

2. If you have Internet mail but not FTP, try the FTP mail server:
send a mail message with the subject "help" and a single message
line "help" to ftpmail@decwrl.dec.com.

3. You may require an 8-bit editor to modify the the Poor Man's
Packet source code, I suggest Microsoft's m editor (came with my C
compiler), or Microsoft Windows 3.1's Notepad editor.

4. I have seen these ads:

BayPac BP-1, "$49.95 + shipping" (73, Jan 1993, p54):
Tigertronics Inc
400 Daily Lane
P.O. Box 5210
Grants Pass, OR 97527
800-822-9722
503-474-6700

BayMod-9, "$65 + tax and shipping" (73, Oct 1992, p51):
PacComm Packet Radio Systems, Inc
4413 N. Hesperides St.
Tampa, FL 33614-7618
800-486-7388
813-874-2980

813-874-8696 FAX

Digicom for Commodore 64 (Nuts + Volts, Feb 93, p11):
Crawford Amateur Radio Society
R.D. #1, Box 101
Guys Mills, PA 16327
$49 + $4 shipping
Catalogue $1

5. I have recently learned there is ALOT more available from:
> For amateur radio related information, send a message to:
> ham-server@grafex.Cupertino.CA.US
> or
> HAM-server@GRAFex.sbay.org
>
> Place only HELP and INDEX on separate lines in the text:
> HELP
> INDEX
>
> Another text example:
> GET /hamradio/morse/SM410.ZIP uue

Please email me or post any additions/corrections.

Folks,

I live in California and passed my tech no code on August 8th. My license was granted on September 9th. One month and a day! I have yet to receive it in the mail however, I expect within the next week. The FCC really looks like (for the lack of a better phrase) they have gotten their shit together. Hats off to the expedient fashion they have granted my license.

Scott

>
> ...phil /kd8uoy

Well Phil, why didn't you mention that when you first heard on here
that the repeater in question is transmitting on a nationally
recognized simplex channel, and *also* using a simplex freq as
its input?

Using simplex on the simplex frequency that happens to coincide with the
input can not be considered as deliberate interference; if the simplex
operators listen before transmitting and hear nothing then their
QSO (on this nationally recognized simplex frequency) would be
perfectly legal. The fact that the repeater owner *chose* that
simplex channel as his repeater input means that he apparently
desired to repeat simplex QSO's over his machine.

4227. Re: Looking for the best DSP filter for HF?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-16 19:33:52 UTC
From: wjh@baretta.ideas.com
Message-ID: <wjh.779743255@baretta>
Source record: 260007

herbr@netcom.com (Herb Rosenberg) writes:
first tried the JPS NIR-10. It performed well but I was bothered by
the "digital artifact sounds" in the output. The TIMEWAVE was my next
DSP box and it performed better (and it's less expensive). Apparently
the TIMEWAVE uses 16 bit A/D and the old JPS NIR-10 was only 8 bit.
That made quite a difference in the output. Both boxes suffer from
low audio output for mobile applications and I added an amplified
speaker. The DSP boxes have made mobile HF operation much more
enjoyable.
>I am looking for the best DSP filer for HF use. I am interested in
>reducing all forms of QRM and QRN. I have seem ads for the Timewave and
>the JSp, and others.

>Which is the best and why? What about all the different models from each
>manaufacturer? Which on is the best, do everything you will ever want, etc?

>Thanks.

SB SAREX @ AMSAT $STS-64.022
SAREX Update & Keps 9/16 19:30 UTC

Silver Spring, MD September 16, 1994 at 19:30 UTC

No SAREX Packet Operations

The SAREX team at mission control learned today that we will not be
able to turn on the SAREX packet system during the STS-64 mission. The
Shuttle Crew hasworked hard to conserve power to allow the Shuttle to stay
up an additional, tenth day. However, the power budget is such that SAREX
packet could not be energized through the Orbiter power without impacting
primary payload operations. We will, however, continue voice operations
using battery power when the shuttle crew is available. The SAREX team has
had many reports of voice QSOs with the shuttle crew on this flight.

Orbital Elements

The following represents the latest Keplerian Elements as generated by
Ron Parise, WA4SIR, at the Goddard Space Flight Center and checked by
Gil Carman, WA5NOM, at the Johnson Space Center.

STS-64
1 23251U 94059A 94259.27989906 0.00005269 10869-4 78459-5 0 268
2 23251 57.0062 194.7051 0009503 278.7996 81.2013 16.11955829 1033

Satellite: STS-64
Catalog number: 23251
Epoch time: 94259.27989906 (16 SEP 94 06:43:03.28 UTC)
Element set: GSFC-026
Inclination: 57.0062 deg
RA of node: 194.7051 deg Space Shuttle Flight STS-64
Eccentricity: 0.0009503 Keplerian Elements
Arg of perigee: 278.7996 deg
Mean anomaly: 81.2013 deg
Mean motion: 16.11955829 rev/day Semi-major Axis: 6619.6156 Km
Decay rate: 0.53E-04 rev/day*2 Apogee Alt: 247.52 Km
Epoch rev: 103 Perigee Alt: 234.94 Km

NOTE - This element set is based on NORAD element set # 026.
The spacecraft has been propagated to the next ascending
node, and the orbit number has been adjusted to bring it
into agreement with the NASA numbering convention.

Has anyone else had problems with there Icom 726. I purchased on this
Has anyone else had problems with there Icom 726. I purchased one this
spring and it has an intermitent problem. It's still in waranty so I
will be taking it in for repair soon.
The problem is the USB mode seems to get very narrow in bandwidth on
occasion. I can turn the rig on and it might be fine and it might not.
After leaving it on for a while it will just suddenly go to what sounds
like a narrower bandwidth. Switching to LSB ti will sound fine untill
switching back to USB.
Anyone else had this problem?

4232. NEWSLINE VIA INTERNET

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-16 20:33:27 UTC
From: szinski@prairienet.org
Message-ID: <35cven$e4b@vixen.cso.uiuc.edu>
Source record: 259995

I have a proposal for helping get NewsLine out to the various groups and nets.

My proposal is simple: Take the NewsLine audio, digitize it into a computer (e.g., SoundBlaster), compress the file, and make it available on the Internet via anonymous FTP site.

A 15-minute recording at 7,000 samples/second (telephone quality) would be roughly 6.3MB in size. This would probably compress to under 5MB which would be a relatively small file for someone directly on the Internet. To download 5MB at 14.4Kbps would take about an hour

My question is simple: If I were to undertake such a project, would it be of service to anyone? I know that our weekly net has to pay to call long-distance to retrieve Newsline via landline.

4233. ARLP038 Propagation de KT7H

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-16 21:16:58 UTC
From: w1aw@arrl.org
Message-ID: <$arlp038.1994@ampr.org>
Source record: 260005
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

SB PROP @ ARL $ARLP038
ARLP038 Propagation de KT7H

ZCZC AP52
QST de W1AW
Propagation Forecast Bulletin 38 ARLP038
From Tad Cook, KT7H
Seattle, WA September 16, 1994
To all radio amateurs

SB PROP ARL ARLP038
ARLP038 Propagation de KT7H

Solar activity was down a bit this week. Geomagnetic disturbances dominated the start of the period, but tapered off steadily, starting with K indices of four and five, and ending at one and two. A solar flare on September 11 could produce some disturbed conditions on the day that this bulletin is released. Disturbances are not expected again until October 4 through 7 when a recurring coronal hole returns.

Solar flux should rise again, peaking around 90 from September 21 through 24. Then it should drop below 80 once more during the first week in October.

Look for the best Fall conditions on HF about a week from now, when we are close to the equinox and the solar flux is peaking around 90 or above.

Sunspot Numbers for September 8 through 14 were 67, 56, 37, 58, 24, 12 and 11, with a mean of 37.9. 10.7 cm flux was 89.1, 87.1, 81.7, 81, 77.2, 75.5 and 74, with a mean of 80.8.

The path projection for this week is from San Francisco, California to Laos.

80 meters looks good from 1130 to 1400z, and 40 meters from 1030 to 1430. Check 30 meters from 1430 to 1600, although on many days it should open as early as 1000. 20 meters should be strong from 1600 to 1800, and on many days may open a half hour earlier and close as late as 2000. 17 meters looks good from 2300 to 0400, and 15 meters looks best around 2330 to 0100, and possibly until 0300. 12 and 10 meters do not look good at this time, but if the solar flux turns up, check these bands around 2330 to 0130. On rare occasions they could stay open until 0400.

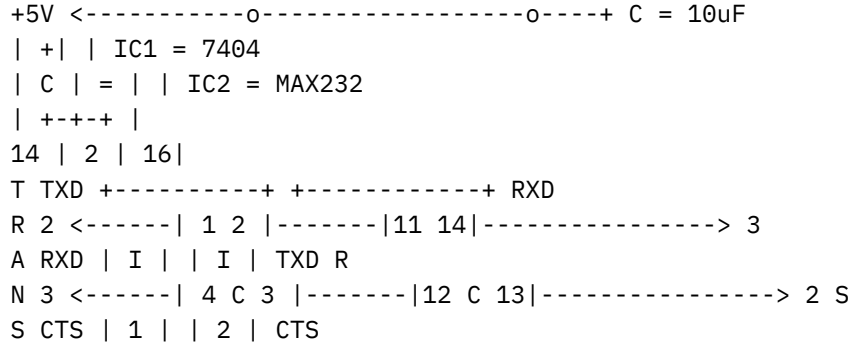
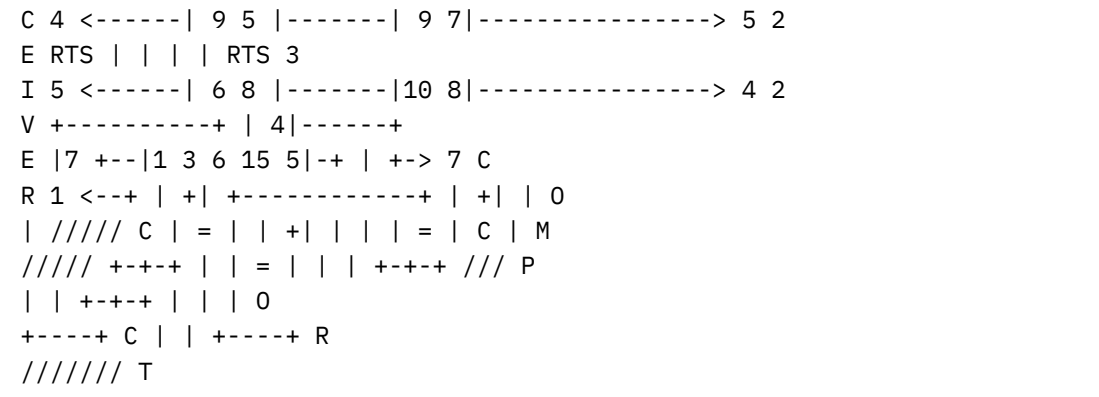
: > sells interfacing hardware.
:
: The Yaesu CAT System Interface is "FIF-232C".
:
: J-COM / Ramsey also sells an RS-232 interface. Their TC-Y1 will
: interface with the FT-1000, and comes with a disk full of software.
:
: If you are a homebrewer, the MAX232 chip and a resistor may be
: helpful.

If it would help any, here is a interface for the Kenwood TS-850S. The idea
is probably almost exactly teh same for the Yeasu. The idea being the radio
outputs 5v levels and you need to convert this to the +-12V levels RS-232 uses.
Thats all. I have not yet built this, but will be building a derivation of it
in the future. This might be a spring board for you to work off of. As far as
I can tell, the circuit is sound yet its up to the builder to verify this-
although I've been told that this works well, so good luck. Note: Kenwood
happens to implement a asserted low output (where you give a ground signal to
represent a 1) thus the 7404 inverter. BTW, the circuit is really inexpensive.
You can buy the
MAX-232 IC for about $4-6 from Digi-Key although they have a minimum order...
you might be able to find somewhere else that would sell you just one.
Good Luck!

*** Homebrew Interface Schematic by IW3FQG ***



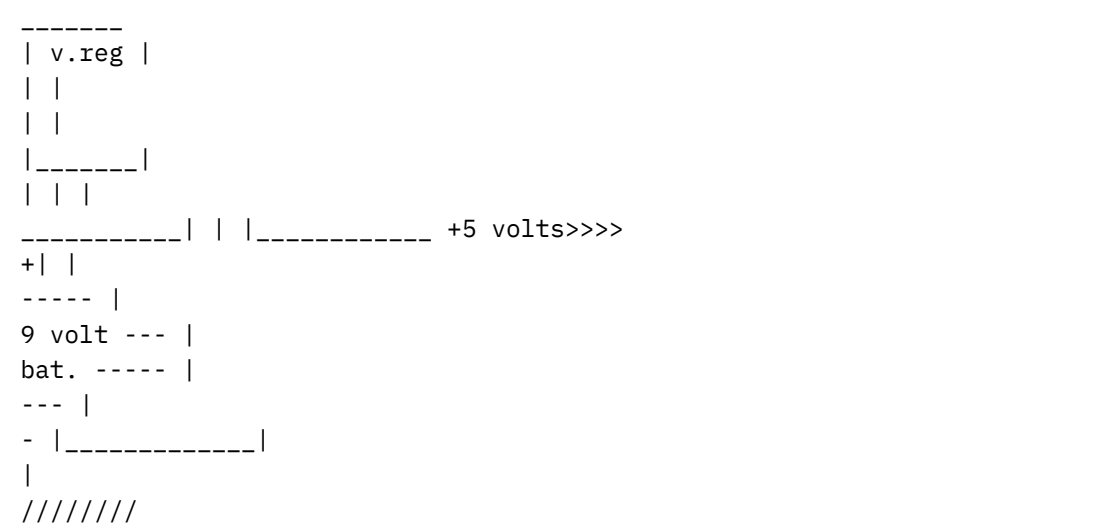


1990 IW3FQG

Following parts obtained from JDR Microdevices, San Jose,Ca. 800-538-5000
IC1------7404 Hex Inverter (14pin IC socket pt# 14PIN ST)
IC2------MAX232CPE Dual RS232 trans/rec (16pin IC socket pt# 16PIN ST)
C--------10uf Tantalum caps

The 6-pin DIN plug for the transciever connection is avalible from
Radio Shack...cat# 276-020. As well as the 25 or 9 pin connector for
the comm port.

The +5 volts can be easily obtained using a 9v battery and a 5v fixed
voltage regulator IC (R.S. cat# 276-1770)



The following is a the pin out difference
between a 25 pin and a 9 pin AT serial connector

RS232 SIGNAL PC-AT (9pin)

The Internet DX Mailing List
Frequently Asked Questions (FAQ) Sheet

Lyndon Nerenberg VE7TCP/VE6BBM
(Last Changed: 930906)

What is the Internet DX Mailing List?

It is an electronic mailing list dedicated to the dis-
cussion of Amateur Radio DXing. This is the place to
exchange tips and techniques, discuss hardware (rigs,
antennas, DSP add-ons), awards, announce upcoming DXpe-
ditions, etc. Anything and everything pertaining to DX
is fair game, with the following exceptions:

* Don't send requests for QSL info to the list. (If
someone wants to coordinate a list of current QSL
routes and post that on a periodic basis please
get in touch with me.)

* Don't send lists of QSL routes to the list. (See above.)

* Discussion about contests and contesting should be kept to a minimum. The CQ-Contest list already provides an excellent forum for contest related discussions. (To subscribe to CQ-Contest, send an e-mail request to cq-contest-request@tgv.com)

How do I join the list?

To subscribe, send an e-mail request to

dx-REQUEST@unbc.edu

asking to be added. If you are not directly connected to the Internet you must provide an address relative to an Internet site. (We are not connected to BITNET or the UUCP network.) If you are not sure if you are an Internet site, ask your local system administrator.

Requests to be dropped from the list, change of address requests, or any other administrative mail should also be sent to the above address. UNDER NO CIRCUMSTANCES should administrative requests be send to the general

submission address!

Is the mailing list archived?

In a word, no.

How do I send a message to the list?

It's easy! Just send an e-mail message to:

dx@unbc.edu

Your message will be automatically resent to all the mailing list subscribers. Depending on the load on our mail system this could take anywhere from a few minutes to several hours. If you don't see your message within a day or so, send a message to the request address above (NOT the general submission address) and we will look into the problem.

Here are a few things to keep in mind when sending a message to the list. If everyone follows these guide-lines it will help the list operate smoothly.

* Make sure your subject line is appropriate. If a conversation wanders off the original topic, change the subject line to reflect the new line of discussion.

* Proofread your message before sending it! Spelling mistakes and poor formatting do nothing to help you get your message across.

* Keep it short! Many subscribers pay for their e-mail access. Don't include 100 lines of the message you're replying to and then add a three line contribution. Only include as much text as is necessary to establish the context for your reply.

* Watch your language! This list is gatewayed onto packet radio. Don't say anything that you wouldn't (or shouldn't) say over the air. Anyone violating this rule will be dropped from the list *immediately*!

* If someone asks a question, send your answer to them directly. The person asking the question should collect the responses, then send a summary to the list. This helps cut down on unnecessary

list traffic.

* Eschew flamage. If someone sends a flame to the list and you can't bite your tongue, send your flaming reply directly back to the flaming individual, not back to the list. No one wants to pay $1.00 to read these messages (the original flame + your reply). Treat flamers the way you would two-meter repeater jammers - ignore them.

* Make sure there is something of value in each message you send to the list.

When I reply to a message using my mailer's REPLY command I never see a copy of the message come back from the list. Why?

There are two possible causes. One is that your mailer sends the reply only to the originator of the message. In this case you will have to manually CC the mailing list. The second possibility is that your mail reader is so ancient and broken that it sends replies to the ``envelope'' from address instead of the From: or Reply-To: header values. If your mailer sends replies to dx-request@unbc.edu you are running broken software. If you are in the att.com or microsoft.com domains you want to double check for this second problem. Note that replies sent to dx-request get filed in the bit bucket.

Where can I obtain back issues of the various DX bulletins?

An incomplete archive of various Amateur Radio related bulletins is available via anonymous FTP from unbc.edu:/ampr/bulletins/. I add back issues as I come across them - feel free to contact me if you can help fill in the holes. Some time this fall I will be setting up a WAIS server that will include all the online bulletin files. WWW and Gopher interfaces to this data are also in the works.

If you have any suggestions or additions for this document, please e-mail them to: lyndon@unbc.edu

4239. Re: (Getting long) Re: A Repeater on 147.555?!?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-17 00:37:24 UTC
From: JSAMO@acad1.alaska.EDU
Message-ID: <01HH6Q9CQT4QAFU9TV@mr.alaska.edu>
Source record: 260008

Seems like there could be a relatively simple technological solution to this problem.....remember back in the early days of repeaters that 146.94 was a simplex frequency before it was a repeater output frequency??? As repeaters were developed, the solution to the problem of the repeater causing interference to simplex users was a "guard receiver" on the repeater. This additional receiver was tuned to the repeater *output* frequency and the repeater control logic set up in such a way that the repeater transmitter was inhibited if the squelch on the "guard receiver" was open--indicating activity on the channel. When this activity ceased, the repeater transmitter was again enabled, and normal repeater operation could resume. The guard receiver had to be co-located at the repeater site, of course, so that it could hear far-away stations on the repeater output channel.

Perhaps this is not a total cure-all, but it would at least enable the repeater to co-exist on a simplex channel without causing interference to simplex users--with the drawback that repeater users would have to wait for the channel activity to drop before their signals on the input could bring up the repeater transmitter. Before rigorous bandplans were adopted guard receivers were much more common than they are today, but were installed to comply with FCC regs which at that time required that you not intentionally clobber another QSO on a given channel. Since repeater operation and "automatic control" have become recognized by the FCC, I suppose repeaters now have the right to come up on any channel they want at any time they want. Seems like the repeater coordinator(s) should have required the new repeater to utilize a guard receiver, especially since it is in violation of the bandplan by its use of simplex frequencies. Of course it's easier to QSY rather than fight, but I wouldn't take this lying down if I were so unfortunate as to live in Southern Calif!!!! (big smiley!) Last time I visited W6 it was very difficult to find an empty simplex channel, and of course now it's worse!

This may or may not be what you are thinking of. In the September 1993
issue of QST on page 23, there is a shaded box with the title,
"Reconditioning Small Lead-Acid Batteries." It's kind of long, so I
wasn't going to type it unless you really needed it. The basic concepts
though are to apply a large amount of voltage in the correct polarity
untill it to start charging - 50 volts on a six volt battery. He does
say that you should do this when you are there, or else put on a
"sutiable resistor in the charging circut to prevent excessive current if
the battery came "alive" when [he] wasn't around." The author goes on to
say that this might not work, but he has sucessfully applied charging
voltage in reverse for about 30 seconds - allowing no more than 0.5
amphere of current to flow. This is actually suggested by some
manufactures of lead-acid batteries. There is an explanation of why this
works too. Once the current flow is started, it can be increased by
repeated charging and discharging until the battery begins to act like a
normal battery.

Hope this helps

Max

In Hints and Kinks by the ARRL a few years ago, an article by a British
ham described how to revive a Nicad by adding distilled water. He drilled
a small hole thru the center of the anode. He inserted a syringe needle thru
the whole thru the rubber pressure seal and added about 3 ml of distilled
water to a AA size nicad. The rubber pressure seal supposedly closes enough
to prevent a leak. The battery is allowed to sit overnite while the water
disperses into the battery. He then recharged it to near full capacity.

I tried this myself and surprisingly, it works. You don't get the full
rating you had before but I got about another year of good use for my
HT nicads. They were 5 years old and wouldn't hold a charge. The author
of the article stated the batteries dry out and adding real electrolyte
would be better but said the distilled water was good enough. I haven't
done it since, I like a rotating my nicads every 3 years now for
reliability.

4242. PA QSO PARTY RULES

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-17 01:41:32 UTC
From: cwm3@psu.edu
Message-ID: <cwm3.20.2E7A494C@psu.edu>
Source record: 260011

ABBREVIATED RULES FOR THE 1994 PENNSYLVANIA QSO PARTY

PENNSYLVANIA QSO PARTY
Sponsored by the Nittany Amateur Radio Club of State College, Pa.

OPERATING PERIODS
1600Z October 8 to 0500Z October 9 and 1300Z October 9 to 2200Z
October 9.

FREQUENCIES
SSB: 1850, 3980, 7280, 14280, 21380, 28310
CW: 40 KHz up from the bottom and 1810 KHz.
Try 20, 15, 10 on the hour between 1600 - 2200 UTC
Try 160 meters at 0300Z Sunday.
NOVICE/TECH CW: 10 KHz up from the bottom end of the subband.
MOBILE WINDOW: 5 KHz below listed frequencies. KEEP CLEAR FOR
WEAK MOBILES.

EXCHANGES
Sequential SERIAL NUMBER plus COUNTY or ARRL or RAC section.
Stations on county lines will give out ONE serial number per
contact but all counties may be counted as multipliers.

Work stations once per band and once per mode. Work mobiles again
as they change counties.

SCORING
QSO POINTS
CW QSOs on 160 and 80 - 2 points
Other CW QSOs - 1.5 points
Phone QSOs - 1 point

MULTIPLIERS
Pennsylvania Stations: ARRL sections + RAC sections + PA
Counties + 1 for DX. (150 total)
Out-of-State Stations: Pennsylvania Counties (67 total)
FINAL SCORE
Total Points X Total Multipliers
QRP BONUS MULTIPLIER
Multiply your final score by 2 if less than 5 watts output.
NOVICE/TECH BONUS MULTIPLIER
Multiply your final score by 3 if a novice or tech.
PA MOBILE BONUS POINTS
If mobile, add 500 points to your final score for each PA
county from which you made at least 10 QSOs.

ENTRY DIVISIONS
Single op medium power (150W), Single op QRO, QRP (5W), Multi-single, Multi-multi, Portable (single op or multi-single only), Novice/Technician, Mobile.

AWARDS
Plaques to top entries in all entry divisions plus single op (Eastern, Central, and Western Time zones), single op EPA, single op WPA, plus others as warranted. Certificates to county and section winners. Trophies and gavel to winning big and local club.

LOGS AND DUPE SHEETS - Logs must be submitted on an official form or reasonable facsimile. Forms are available from NARC. Entries with 100 or more QSOs MUST have dupe sheets. Computer logs and dupe sheets OK. Computer logs MUST include a completed summary sheet!!! 100 points will be deducted for each dupe found.

SEND LOGS by November 13, 1994 to:
Douglas Maddox, W3HDH
Nittany Amateur Radio Club
P. O. Box 614
State College, PA 16804-0614

A DONATION of 1 dollar with your entry to help defray the costs of mailing, printing, etc. would be greatly appreciated. *** PLEASE NO SASEs.

An information packet including log and check sheets is available. #10 SASE to the above address or a request may be sent via packet to K3CM@W3YA.PA.USA.NA or via E-mail to cwm3@psu.edu. Persons who have participated in the party in 1991 or later will automatically receive these materials.

QSO PARTY COMPUTER LOGGING PROGRAMS
There are a number of PA QSO Party logging programs available. Contact their authors directly for info: K3CP, KM3D, and LTA Industries,(Box 92, Canfield, OH 44406). There is also one available from the Delaware-Lehign ARC. Contact W3TDF

4243. PA QSO PARTY NEWS #1

Pennsylvania QSO Party Newsletter #1 (9/15/94)

Four weeks to go! Are you ready for the QSO Party? Have you received the logs, check sheets, and summary? If not, request the packet by packet to K3CM@W3YA.PA.USA.NA or via E-mail to cwm3@psu.edu.

Special event station, W3YA will be on 20,40,80 and maybe 160 for those bonus points (200 per QSO/per band/per mode).

Early indication of portable activity:
N3IXR & N3BGV at last word will be on Somerset/Fayette/Westmoreland line. NW3C either at home (Wash) or Crawford County. K3YD & N3GWR will be back in Pike and K3ARR hopes to provide both Northumberland and Union plus others if necessary from mobile. Word has it that Mercer County will NOT be a problem this year as K3LR with WR3G are almost finished with mods on the New big station!

Let us know if you or your club have any plans for portable/mobile operation so we can get the news out. Remember to "talk it up" on the air and at the club meeting. See you next week with latest updates!!

73, Doug W3HDH and Chuck, K3CM.

4244. TH-79 mods?

Fellow Hams:

I am currently looking for the mod sheet for the new Kenwood HT,
TH-79A. I know it is a new radio, but I wonder if anyone has decoded it
from the Japanese yet. I am a MARS member, and I would like to use it on
our repeater activities. Unfortunately, Regional MARS has not seen
through to sending my revised pedigree, so Kenwood won't talk to me.

I understand it will do many tricks that would make your dog
jealous, I just want the limited outband mod.

Anybody that can help, please email. --->cswanson@kaiwan.com

Hello all, I have a commerical model HT-1000, Yes I did say HT-1000, for sale. I've been told by many people, including a motorola tech that there is no such thing and that it must be a MT-1000. Sorry to say but I'm looking at it right now and it does say HT-1000. Anyway it is a 16 channel UHF (400 MHZ) model. Not real sure on the output or any of the other great features it has. I never got around to ordering a manual for it. I picked it up from a company that was going under with the intent of having it re-programmed for the 440 ham band. As far as getting it re-programmed from what I understand will cost a few bucks, unless you know a tech with the software, in that case a couple 12 packs and you'll be all set!! It has the attached speaker mike but no charger. I been using my charger for my 2 meter on it with a couple of wires. It's FCC type accepted and intrinsically safe for cl 1,2,3, div1 gp c,d,e,f,g.
You police and firefighters could have your cake and eat it too, or should I say have your work and play at the same time. Send me your offers here, or fax me at 1-810-687-3129.

In article <35327o$pg0@crl.crl.com>, Paul Pescitelli <pbp@crl.com> wrote:

>Anyway some were wondering about using the computer to learn code. This is in
>my opinion the worst way possible!

Personally, I find computers good to 'test' myself - after a little while
with code tapes, I find that I 'remember' whats going to come, and it
defeats the whole learning process - I use a computer to test myself all of
the chars I already know + a few I've just learnt... And as the PC speaker
goes dit-dah-dit-dah, I'd do my copy on a paper...

>I bought the most expensive type of
>code practice oscillator you can get - An HF rig!!! That will sure put the
>bug in you. (No pun intended!) . Just though I would pass my two cents along,
>Do it the way the OLD-TIMERS did it. Listen to it on the air, it is a whole
>heck of a lot different that what the computer spits out at you!

Sure sounds cool - there's only one problem where I come from (Singapore) -
the local 'whatever' authority (TAS) has this set of 'rules' you see - it's
called the regluations. And basically, it is such that :

No one is allowed to own/purchase such equiptment, unless he is licensed, or
has passed the amateur exam. (Come to think of it, if you're licensed, you
must have passed the exam...)

At the time I started to learn, there was only _one_ license. And we had to
pass a 2 part MCQ (95 questions in 3h) theory+operating procedues papers,
followed by a morse test (15wpm). Having passed both, we then have to setup
our station within a year, or be subjected to the morse test again...
(To make matters worse, the theory is conducted once a year in around
august, and the morse, twice (Nov/Apr).)

Just last week, I heard that now, there is a 'no-code' restricted license
here. I've yet to find out the details on this, but a plus point that was
also reported was that the minimum age for taking the license has been
lowered from 21 to 16.

Oh yes, one other thing, a new amateur will be restriced to CW for the 1st
12 mths. That was the old regulations - I'm not sure how this new restricted
license will affect this...

I'll perhaps find out in the comming monthly SARTS meeting - that'd be at
the end of the month...

73s!

PS: I just took my theory this Auguest, the results have yet to be released,
and my morse don't seem to be going too well... 8(Oh yes, an effective way

to learn morse, everywhere you go, just look at signs and 'CW' them out - -
thats what my friend taught me, he's a radio operator in the Singapore Navy

DH> David

Don't blame the government for YOUR mistakes. The new form 610 has been
around since March 1st 1994. If you took the time to study for the
exam, found the right place to take it, brought your pencils like you
are supposed to, you should of also read that the old 610s are no
longer useable.

Who's fault would it have been if you FLUNKED the test? YOU made the
mistake, no one ELSE!!! Time to take personal responsibility for your
actions <new concept......huh?...>

A mobile type unit will work better thanks to it's better receiver filtering and higher power, but if there are good nearby repeaters, the HT will also work after a fashion. There are slide brackets that let you quickly move a mobile rig back and forth between house and car, or slip it in the trunk in high crime areas. You will need a high current 12 volt supply in the house.

If you want to work distant stations, however, a good antenna is important. In almost all cases, a high outside antenna will work better than any antenna you can build inside. You don't necessarily need a tower in the yard either. There are ways to disguise an outside antenna on the roof. One good way is commercially available, though you can certainly build a similar one yourself. That's the Ventena. It's a vertical antenna inside a piece of PVC pipe that's slipped over a vent pipe on the roof, extending it. To the casual eye, it just looks like a slightly longer vent pipe, not an antenna.

If you have access to the attic, an attic mounted beam may be possible, though rotating it may be a problem. Keep this in mind, however, increasing height is almost always better than increasing antenna gain at VHF. That's because it directly extends your radio horizon. Beyond horizon contacts require much more path gain (higher transmitter power, directional antennas, better receivers, etc) than contacts within line of sight.

>Another question...is it possible for me to pick my own call-letters? My
>father used to be a HAM (he's been gone for some years) and I would love
>to take up his old call-letters...sort of as a tribute.

This is not possible at this time, though a "vanity" callsign proposal is in the works.

I have this charger and it's been working great, but I have 2 questions:

1 Do I still need to worry about NiCad memory with this charger
or does it take care of it?

2 Is there any reason that I can't add some leads and quick
charge other NiCads (such as hi capacity "D" cells or "AA"
cells)?

Paul -

You might consider asking your question in rec.radio.broadcasting as
well. Some of the visitors there might be able to help.

Also, there is a new mailing list for old time radio -programming-;
there is a chance some of the subscribers might have some pointers to
further data.

To subscribe, send email
To: otr-request@airwaves.chi.il.us
Subject: SUBSCRIBE

There is an experimental WWW page as well as a readonly anonymous ftp
directory for the OTR group (I don't know how well the WWW page
works). They contain a bibliography on the history of radio
programming.

Try the following:
For WWW, ftp://ftp.crl.com//users/ro/lgenco/otr.html
anonymous ftp to: ftp.crl.com, directory: users/ro/lgenco

Finally, there is a proposed rec.antiques.radio+phono making its way
through the approval process. Check with Bill Robie
<robie@umbc7.umbc.edu> for more info on that newsgroup.

If you learn of any other sources, I'd appreciate a note!

4254. Icom 737 control w/Mac SE

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-17 18:16:09 UTC
From: IQC109@uriacc.uri.edu
Message-ID: <199409171820.LAA03225@ucsd.edu>
Source record: 260044

Does anyone know where I can get a reasonably priced program (shareware?)
to control my Icom 737 with a Mac-SE? I also need a diagram so I can
build the interface to the RS-232 port.
I have already tried KE6FG Softwawre in CA (he did not reply to my SASE).
I believe that I did once see a trial copy of a program which was unsuti
unsuitable because it had a pricetag over $200. Also, will the interfaces
available from various outlets such as MFJ work on the Mac (they are
advertised as for IBM)?
.....Thanks, Ken Carr.....KB1AWV

I got a flyer about the ARRL New England convention in Boxboro,
MA, next weekend. All it mentioned as far as costs were convention
tickets, but I am not an ARRL member, and I would only be interested in
going to the flea market. Anyone know how much that costs? Or do you
have to get a ($$$) convention ticket? Anyone know how much that would
cost at the door?

Thanks and '73's,...

> be .---

OK, I'll bite! :)

What you *should* have said :) was:

and said, ...-. .. --- -- ... --- -- . .... .- -- ...
--- ....--- ..- ... - -.-. .- -. - - . .-.. .-..
.- .--- --- -.- .

Some will even say that the proper way of doing it is, instead:

and said, ...-. .. --- -- ... --- -- . .... .- -- ...
--- ....- -- ... .--- ..- ... - -.-. .- -. -
- . .-.. .-.. .- .--- --- -.- .

but this is a bit long winded, and most will go to for the first example, where the correction is sent from the beginning of the word (not readily apparent in the example above). Even more will just correct the letter only - in most cases of plain language it is easy to work out what is meant to be corrected.

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-17 22:43:07 UTC
From: Michael@arkas.demon.co.uk
Message-ID: <779841787snz@arkas.demon.co.uk>
Source record: 259744

WRT 1.2 GHz propagation ...

It musn't be too bad - last I heard was that the Brisbane (vk4) RSR (Route Surveillance Radar) operated by the CAA used it, and hence the amateurs couldn't. I don't recall how many kW/MW of peak pulse power the RSR emits, but it could reliably detect aircraft at a distance of 160 nautical miles. Not bad at all.

Actually, last time I was in vk (Jan '94) they removed the vk1 RSR aerial, the vk3 aerial (Melbourne) was idle, but vk4 was still turning. Any vk amateurs know if these still operate? Do the TAR's use 1.2 GHz as well?

4261. SAREX Packet Now Active

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-17 23:24:48 UTC
From: ABFHB@abacus.gsfc.nasa.GOV
Message-ID: <940917192448.a8c@abacus.gsfc.nasa.gov>
Source record: 260053

SB SAREX @ AMSAT $STS-64.024
SAREX Packet Now Active

Contrary to yesterday's bulletin regarding packet ops, the SAREX team and the STS-64 Astronauts have been given the go ahead to activate the packet system. SAREX packet is expected to be active from now until SAREX stow (unless the crew is using the SAREX gear for general voice QSOs). Those wishing to work the Discovery astronauts in packet mode are encouraged to listen to the downlink frequency, 145.55 MHz, FIRST before transmitting. Ground based radio amateurs need to transmit on the packet uplink frequency 144.49 MHz to have their packet signals heard on the Shuttle. The SAREX packet callsign is W5RRR-1.

Good luck and enjoy!

Submitted by Frank H. Bauer, KA3HDO for the SAREX Working Group

4262. rfmatch6.zip - Hams: RF match calculator and optimizer

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-17 23:55:16 UTC
From: fontana@itnvax.science.unitn.it
Message-ID: <9409172355.kp16598@SimTel.Coast.NET>
Source record: 260052
Cross-posted to: comp.archives.msdos.announce,rec.radio.info,rec.radio.amateur.misc

I have uploaded to SimTel, the Coast to Coast Software Repository (tm),
(available by anonymous ftp from the primary mirror site OAK.Oakland.Edu
and its mirrors):

SimTel/msdos/hamradio/
rfmatch6.zip Hams: RF match calculator and optimizer

RF match calculator optimizer is a graphic impedance calculator. The
program can be used to match sources to loads with networks made with
impedances, inductors, capacitors, transmission lines, stubs and trans-
formers. Frequency and components can be trimmed on line and the result
is imediately shown. Frequency sweep and montecarlo simulation can be
used to evaluate the behaviour of the matching network. Autotuning
helps the user to find a solution to matching problems. A pop-up
calculator for complex numbers is also included.

Special requirements: EGA (VGA).

Changes: Frequency sweep with markers.
Licensed version: Mouse control of cursor. Ability to load a
file of start impedances.

rfmatch6.zip has replaced rfmatch5.zip.

ShareWare. Uploaded by the author.

>

If you find that your audio output is low, you may have an impedance problem with the J&M mike. I tried this in a BMW System 2 (also with pivoting chin guard) and the audio output was in the mud on my Kenwood 742. Switching to a Kenwood mike cartridge and putting both a resistor and capacitor network on to fine tune the audio level resulted in a system I can use on my Goldwing with the visor up and no wind noise. The networks were only used to get the proper values, then a fixed resistor and capacitor were wired in. If you go with a boom mike in a open face helmet you can embed the mike cartridge in the windsock of the existing (intercom?) mike and just run a second wire. Both open and full face helmets work best with a second headset, don't try to integrate the mike and speakers with an existing sound system, most of us have found it's not worth the hassle (impedance mismatch again).

>Hope that helps.... There is a group that meets on Tuesday afternoons on both
>20M and 40M. The 20M group meeta at 2200Z at 14260 usually + because that is

>day workers because of the time... currently 1600Pacific Coast time.. most
>people are still at work at that time.

These are both the same organization, MARC,Motorcycle Amateur Radio Club. We have an HF net, packet notices (I'm the packet coordinator) and a newsletter. Let me know if you would like more info.
BTW, I second the motion on avoiding a hand mike, especially if you drive in heavy traffic. A PTT on your left handlebar allows much better control.

Cheers

Greater than 2 MeV Electron Fluence for 16 SEP is: 1.2E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. Newly assigned Region 7779
(N18E24) was born on an otherwise dull disk.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field was quiet to unsettled. The greater than 2 MeV electron flux was again at high levels. A small enhancement in the greater than 10 mev protons was observed at geosynchronous orbit around 0200Z lasting 10 hours. The peak flux was near 2 pfu.

Geophysical activity forecast: the geomagnetic field is expected to be generally unsettled.

Event probabilities 17 sep-19 sep

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 17 sep-19 sep

A. Middle Latitudes
Active 20/20/20
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

B. High Latitudes
Active 25/25/25
Minor Storm 15/15/15
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions. No changes are expected over the next 3 days, through 19 September inclusive. Near-normal propagation should persist.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACTIVITY

17 SEPTEMBER, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACTIVITY INDICES FOR 17 SEPTEMBER, 1994

NOTE: Energetic electron fluence at greater than 2 MeV was mdoerate today.
The background x-ray flux continued below class A1.0 levels.

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7779 (N17E11), the
only spot group visible, grew slightly to a C-type. The limbs
were quiet.

Solar activity forecast: solar activity is expected to
persist at very low levels.

The geomagnetic field was quiet to unsettled.

Geophysical activity forecast: the geomagnetic field is
expected to be generally unsettled.

Event probabilities 18 sep-20 sep

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 18 sep-20 sep

A. Middle Latitudes
Active 20/20/20
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

B. High Latitudes
Active 25/25/25
Minor Storm 15/15/15
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions
today. No changes are expected. Near-normal propagation
should continue during the next 72 hours, through at least 20
September inclusive.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

4270. 2m handhelds ??

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-18 04:02:00 UTC
From: clint.bradford@ectech.com
Message-ID: <9409181805261397@ectech.com>
Source record: 259880

A> I am planning on purchasing a 2m handheld in the near future.

The HTX-202 from Radio Shack is on sale for $200. this month!
The HTX-202 has 12 independently-programmable memory channels, plus one calling and three priority channels. It comes with continuous tone squelch encode -AND- decode. Power output is 5 watts minimum (7w typical) with 12 VDC supply, 3 watts @ 9 VDC or 2 watts @ 7.5 VDC. Low power setting provides 1 watt output. A power saver circuit with programmable 1/2, 1/4, 1/8, or 1/16-second duty cycle. Batteries are compatible with larger ICOM (IC-2AT/IC-32AT) series HTs.

Repeater offset can be adjusted from 0 to 4 MHz in steps as set by the scan frequency step selection (5, 10, 20, 25, 50 or 100 KHz). Memories store any offset, and any combination of continuous tone frequencies.

Size is 65 x 117 x 37 mm. To put this in perspective, with alkaline packs on the 202 and my ICOM W2A, both are the same thickness. The 202 is maybe 1/4-inch wider (at widest part), and 1/16-inch taller (it's hard to compare because of the irregular shapes of HTs.) The HTX-202 does give the impression of being a "mid-size" HT until viewed up against something like the little W2A, which actually has three different "widths."

Supplied with Nicad battery, charger, 6-cell alkaline battery case, antenna, wrist strap and belt clip.

* True FM modulation (not phase modulation) for outstanding transmit audio and best performance in packet service.
* Continuous tone squelch transmit and receive tones are independently programmable.
* In addition to DTMF dialing, there is 5-digit DTMF selective paging (DTMF squelch).
* A five-number memory dialer that stores 15-digit sequences for autopatch use or DTMF paging.
* Scan for either active -- or vacant -- channels, with programmable scanning step of 5, 10, 20, 25, 50 or 100 KHz, and upper and lower scan limits (for VFO scan.)
* FAST, 25 channels/second scanning.
* Selectable priority channel scan interval, every 4, 8, 12 or 16 seconds.
* Multi-function scanning lets you scan standard memories, priority freq. memories, or a frequency range. Resume can be after 10 seconds, when carrier drops, or remain on channel (don't resume.)
* Transmit timeout - if you frequently time-out your local

repeater, this circuit will stop transmitting after a preset delay (30, 60 or 120 sec.) and sound a beep. In effect, it forces you to reset the repeater before the repeater times out. Of course you can disable the timeout circuit.
* The HTX-202 carries a 1-year parts and labor warranty.

Subjectively, this HT has exceptionally strong, un-distorted receive audio you'll really appreciate when walking around the local (noisy) hamfest. You won't believe the sound is coming from an HT! Transmit audio is crisp, clear and strong.

I put a 5/8-wave mag mount on my car, and used the 202 in the very intermod-rich downtown Ft. Worth, TX area. I've never been able to use an HT on an outside antenna within 2 miles of down-town Ft. Worth before. This one performed magnificently. My ICOM 2400 dual-band mobile gets less intermod than any other radio I've used in this environment, and the HT stayed with it, toe-to-toe. When the ICOM heard intermod, the 202 heard it, but when the ICOM was quiet, SO WAS THE HT!!!!

Even more impressive, the HTX-202 heard signals through the intermod, when the IC-2400 could not pull 'em out! Reason is probably because we purposely limited coverage to ham band ONLY! It can't be modified for out-of-band receive. The design objective was to build a specialized ham radio product that does the best possible job on the ham bands, and that includes the tightest, most intermod-free front end we could design into an HT! The published spec says intermod attenuation is 60db minimum. Spurious response and adjacent channel rejection are also 60db.

The HTX-202 is based on the ICOM 02AT with certain design modifications based on Tandy's specs. These variations include the encode/decode, additional memories, and a full width LCD display. Contrary to rumor, no part of the radio is Kenwood or Yaesu! ICOM sold the rights to their design to Tandy to do with what they would.

Whan Tandy sought to produce the unit, they went to their usual Korean source for cheap gadgetry: MAXON. Maxon then built the HTX-202 for Tandy, under license from Icom. The HTX-202 is surprisingly sturdy, and well constructed, considering that Maxon's Quality Control has, in the past, been suspect.

The York Hamfest will be held at the York Interstate Fairgrounds (on the west side of York) for two days, Sept 24 and 25. Setup for sellers at 6 AM, while buyers storm the gates at 8 AM.
$5 will get you in.

Dates confirmed. More info on ARRL BBS?
I will be setting up GB0 (that is zero !) WCS for Warsash Cubs and Scouts here in the S. of England, probably on 20, 40 and 80. Antenna not brilliant so I would not expect to hear you Russ but probably would make it to you Lars.
Suggest you read/post to rec.scouting as well.

>an HT that requires you carry an instruction manual.

Definitely try before you buy. The Icom IC-02/03/04 were famous for the
b.s. it took to go from repeat to simplex on the same channel. Many
people just sacrificed another memory position. The early ones forced
you intothe same PL tone for memories 1-8, 9 and 10 had different tones.
A new CPU chip fixed that bug, but at extra $$$.
The Yaesu 709 of the same era had an offset switch for -, spx, + which
was it's major comparison feature. The Icom had the easy-on battery,
where the Yaesu had a battery door in the back of the case, and a
cartridge battery.

And when you look at a radio's price, figure in from the start two full
size batteries (the original one will be a small one, that will end up
being a end-of-the-day spare), and a drop-in charger. Your next
purchase should be a leather case or holster.
Later on you will want a speaker-mic (MFJ has some nice rugged ones -
check QST or 73), a mag mount antenna and a mobile power cord.

>Everything else being the same, you might also consider a single band HT

>you can get direct help)

>One more thing... if you buy a used HT, expect the nicads to have
>"memory failure" and therefore need replacing, adding to your cost.
>=Mark= n2rpz@amsat.org

That is one advantage of the older Icom IC-2, IC-3, IC-4, IC-02,
IC03 and IC-04 series, as well as the Radio Shack 2m, 440 and
real-soon-now-available duobanders. The battery packs are rather cheap
and easy to replace - just unscrew the side of the case, and replace the
battery cells for $30 or so... The Yaesus 727 packs (FNB-4s) that I use
are almost as easy - just drop them once or twice and they split open :-).

Change the packs, and tape them shut witha piece of clear 2" wide strapping tape. I put a piece of paper under the tape with a PL tone chart, my phone number, and a "Property of... Reward for intact return" line across the bottom.

And if you are just geting started don't overlook a used radio from someone that is upgrading to a more-features radio, a newer radio, or lost interest in VHF/UHF. The ones to watch out for are the ones where someone went into it to fix it and "fixed" the wrong area...

I lucked out - I picked up my Yaesu 727 duobander radio from someone who was a 20m CW addict and bought a duobander to chat with his buddies on a 440 repeater, and to have 2m for public service funtions - parades, etc. He found VHF/UHF wasn't his cup of tea.
I picked it up used for overhauling a IBM AT that was suffering from a bad case of too many limited knowledge people trying to fix it and a little cash. I used it for a year, then sent it back to Yaesu and got a new main crystal (the radio was 1.5kc off frequency), a new metal frame inside and a new outer plastic case (I had dropped it once too often), new volume and squelch controls (noisy and stiff), a new lithium cell, new keyboard and a new mic & speaker. Plus a full tuneup and warranty. Its after 1am and I'm forgetting something else I had them do. Anyway, all of the above was about $225. So for under $325 I had a very good duobander that looks brand new, works like new, with a factory warranty. I bought a speaker-mic at a hamvention, and a cheapie case. I plan on having a local SCA leatherworker make me a custom leather holster.

If you buy a used radio, you can also expect to replace the lithium cell - if there is one. You wouldn't want the radio to lose it's mind a month after you bought it would you? Mine did. Some clip in, some solder in. Some are easy if you have a steady hand, a good solder station, a vise to hold the radio, a third hand to hold a 6" magnifying glass and a lot of patienc a lot of patience. Some you need to have replaced by the trained people...

PS - If I was going to find a decent duobander all over again I would have found me an Icom IC-32 - even if it took 3 months. That was a short-lived Icom duobander that was built in the shape of the IC-02/03/04 series.
The main reason for picking that radio? Cheap batteries (the major repeating expense), 12 volt operation in a car without a bulky 9v adapter, decent speaker volume, aftermarket add-ons are easy to find (everybody makes them for Icom), etc. And ruggedness. My Yaesu has been the most fragile radio I have had. I understand that the IC-02 was the RS 2m model, and the IC-32 was the model of the soon-to-be-released Radio Shack duobander.

4275. RE: Soundblaster "Loop" Recording

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-18 12:58:34 UTC
From: jnavary@nyx10.cs.du.edu
Message-ID: <35hdhq$2q4@nyx10.cs.du.edu>
Source record: 260063
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc

I've had quite a few replies to my query about using the
Soundblaster for "loop" recording the audio output from my
rig. Many thanks to all who replied!

I'm now using GOLDWAVE v.2.11 for this purpose and it seems to
be working like a charm. Can capture 120 seconds of audio
before it loops back to the beginning of the file.

Once again, thanks to all.

> : Thanks

I used to have a Honda 400cc twin and I had a 2m mobile that I used.

My own opinion is to think long and hard before you go motorcycle
mobile. There is enough to do while biking (esp.in L.A. traffic) that a
ham radio will occupy just enough of your attention that you will miss
something and be turned into a statistic by some lead sled driver that
couldn't see a bike if it was sitting on his office desk.

Now that I've offered a opinion, I'll give you a description of the
hardware that was used to form that opinion. It's more than the mic,
becuse there's more to a bike radio installation than just the mic.

This was back in 1981, before the majority of the synthesized radios. I
used the bike for commuting, and didn't want to put anything on it that
I couldn't afford to lose. I picked up a 2nd hand 12 channel Midland 2m
radio, crystaled it up on 3 repeaters and 2 simplex channels, put a
small reed relay control board in it, and remoted it to a saddlebag.
The volume was preset and the speaker jack fed a l-pad and earphone.
The squelch pot was a voltage divider, so a another earphone jack switch
contact was used to allow use of an external pot. A replacement mic was
acquired and gutted for the element, which was epoxied to the inside of
the chin guard on my helmet (a .75" wide by .5" tall strip of padding was
removed from an area just to the right of my mouth, the idea was that
I'd talk _across_ the mic rather than into it. I had tested it earlier
in several positions, and that was the clearest. Your milage may vary.
A thin curly-cord was acquired for the cabling - it was originally
designed for a GE-Porta-Mobile radio with the handset option. One was
used from the control box to the breakaway connector and a second from
the helmet equipment to the breakaway plug.

I wanted a break-a-way connection for the mike and earphone, and about
that time I saw a Pacific Plantronics operator headset with a break-away
connector (custom, molded, 4 pins. Would have had to splice the cable
in 2 places.). I also went to the Wescon trade show, looked at hundreds
of connectors... I also looked through the Motorola parts catalog
(highly recommended reading). I ended up using a bastard connetor I
found in surplus that had 6 contacts and a was sexless. It snapped
together, was flat, easily shed rain and was about 1.5 " wide.
The contacts were on 1/4" centers and reminded me of the ones in a card
edge connector. When the halves were pushed together they would touch,

then as they were pushed further they would compress and ride over each other and overlap.

Several different methods of PTT switching was tried, and finally a DPDT toggle switch was mounted under the starter button on the right grip, and the armatures were wired into the starter button contacts, with one side wired back to the bike starter, and the other side to the PTT wiring. Flip the switch one way and the bike starts, the other way it talks... A duplicate switch bracket was mounted on the left grip and it selected the normal horn or the air horns.

The earphone took some thought. I wanted something that wouldn't tear up my ear if I took a spill (my mother was an RN that was in pediatrics, but sometimes pulled a shift in ER. I took her input fully - and seeing a few ER pictures helped convince me). I ended up studying a Air Force helmet used in an jet fighter while on a visit at Edwards AFB. I ended up realizing that my chances of acquiring a surplus A.F. helmet was rather slim, so I got a large helmet, found the flattest speaker I could, ordered it out with a plastic cone (no sweat damage) and mounted it between the padding and my ear. As long as there wasn't too much volume used it was OK.

A small minibox mounted to the bolts that held the handlebars in place had a squelch pot, an L-pad and a rotary switch for channels. A power switch was 3pdt center off and switched both 12v and earphone to the 2m radio in one position, and in the other position switched to a AM-FM pocket radio that I had on the local top-40 & traffic every 15 min station.

The antenna was a standard Larsen antenna made for no-ground-plane situations. It was mounted to the top of the saddle bag.

Years ago I used to use a 80uf 450v capacitor and a 400v supply. I'd charge the cap, then discharge it into each cell individually, + to +, - to -. Many cells took 3 to 4 zaps, but it worked very well.

4286. PRB-1 Folklore

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-18 16:42:10 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <9409180941.aa09019@paris.ics.uci.edu>
Source record: 260069

As one post recently reiterated, there are some of us hams who believe that PRB-1 exempts us from local antenna ordinances. Others believe that if we belong to Civil Defense, MARS or RACES, we are able to ignore local ordinances in our own communities. It just isn't true under the law.

(In fact, PRB-1 says NOTHING about restrictions in your deed or apartment contract. They can restrict you as much as they like, it seems. It only applies to a homeowner who applies to the local authorities for a permit to erect an antenna under local ordinances.)

PRB-1 only requires "reasonable" accomodation of the amateur's communication needs. There is at least one Court that sees the "balancing" of the community's needs against the amateur's needs as ALLOWING THE COMMUNITY TO DENY THE AMATEUR ANY TOWER AT ALL!

PRB-1 does NOT mandate a 65 foot tower allowance for anyone.

PRB-1 does NOT supercede the local community's ability to regulate the safety, location, and aesthetics of a tower.

Unless you have a LOT of TIME and MONEY, fighting a local community in court is a rough battle with no assurances of victory. (Check with a local attorney, local courts in your area just might be very favorably inclined towards PRB-1, it differs from area to area.)

I heartily recommend Wayne Overbeck's article about PRB-1 in June 94 CQ magazine.

We can do ourselves a lot of harm in the public eye if we go off quoting the law very wrongly in our favor. It makes us look like we are not very thoughtful or careful about what we do as hams. This is not the image we need to project in order to protect and promote ham radio.

Tomorrow, congress could up and decide to ban ham radio. That's it. NO CONSTITUTIONAL RIGHT to ham radio exists as far as I can see it. It is completely dependent on the will of the people of the USA as expressed through congress. So, we need people to understand how patient, fair, kind, and civic minded we are - this, in the long run, to protect the future of ham radio.

Well, off the soap-box. Good luck to all trying to get an antenna permit.

Clark

STS-64 SAREX Is Active On Packet Radio

After several days of being silent on packet, the STS-64 SAREX payload came alive today on packet. The general reason given for the silence was to conserve electrical power inorder to extend the mission of STS-64 for another day. KA3HDO reports that the SAREX packet payload was turned on today and will remain on until it has to be stowed for landing. Listen for on the packet downlink link frequency of 145.550 MHz and remember that the the uplink is on 144.490 MHz. However, before transmitting, listen to the downlink for voice operations as voice operations are always a possibility.

AMSAT-NA Board Election Results Announced

Martha Saragovitz, AMSAT's Corporate Secretary, announces the results of the recent election to fill three seats on the organization's Board of Directors.

A total of 1548 ballots were received at AMSAT Headquarters by the September 15th deadline.

The vote was:

Tom Clark W3IWI 1199
Andy Mac Allister WA5ZIB 837
Keith Baker KB1SF 781
Bob Myers W1XT 614
Lou McFadin W5DID 573
John Hansen WA0PTV 505

Therefore Tom Clark and Andy MacAllister are returned to the Board and Keith Baker replaces Joe Kasser (G3ZCZ). Bob Myers becomes the First Alternate and Lou McFadin the Second Alternate. The alternates serve until the next election, one year form now.

Thus, for the next year, the AMSAT-NA Board will consist of:

Keith Baker KB1SF
Tom Clark W3IWI
Dick Daniels W4PUJ
Junior deCastro PY2BJO
Rbt. Diersing N5AHD
Andy MacAllister WA5ZIB

Argentine Antarctic Satellite Operation

On 14-SEP-94 an Argentine team sailed on an icebreaker carrying a portable MICROSAT station and two AMSAT volunteers, LU2AOQ and LU9AFP. The objective is to demonstrate digital satellite communication including the transfer images and data files to those stationed in Antarctica with an aim of eventually placing permanent amateur satellite stations in Antarctica.

Such a demonstration is made all the more relevant because normal HF communication between Antarctic bases and the South American continent are frequently interrupted, especially during this portion of the solar cycle.

The ice breaker is working under callsign LU7AA, and will be underway for about one week. In addition to operating on the MICROSATs, the AMSAT volunteers will working the RS satellites.

All the amateur community is invited to participate in this experiment.

The portable station being used was assembled by LU5EO.

JARL SPECIAL EVENT STATION

HR AMSAT NEWS SERVICE BULLETIN 260.05 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 17, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-260.05

JARL Sponsors A Special Event Station

In connection with the International Telecommunications Union 14th Plenipotentiary Conference to be held in Kyoto Japan from 17 September to 14 of October, the Japan Amateur Radio League, has set up a special amateur radio station using the call 8N3ITU. The station is available to all Conference attendees who are licensed amateurs in their particular countries. Many Post and Telecommunication Ministers and their assistants from all over the world are to attend this meeting. The station will be capable of operating all modes from 1.9MHz to 1200 MHz, including AO-13 and other satellites.

Amateurs are reminded that 8N3 is not a new country, just JA, and that this is not a DXpedition. Japanese operators will be present but only to assist operators from foreign countries. They are instructed not to handle "pile-ups." Amateurs are asked to please not disturb the operation of 8N3ITU and please not engage in DXpedition style pile-ups. QSLs for contacts with 8N3ITU will be sent via the JARL bureau. For those who cannot use the bureau, they may send cards and an SASE to 8N3ITU,JARL-KANSAI 3-8-31 DAIDOU,TENNOUJI,OSAKA 543, JAPAN.

JAMSAT played a very important roll in achieving satellite capability for 8N3ITU. It is hoped that this will demonstrate, to the delegates, the possibilities and importance of Amateur Radio Satellites. Hopefully it may influence some governments, of countries where satellite operation is inhibited, to open the VHF and UHF Bands for Amateur Satellites Usage.

Although this operation is coming at a time when AO-13 is not in its best orientation and the station may be hampered by a long coax run, the JAMSAT volunteers are doing their best to put on a successful satellite demonstration for some influential people. AMSAT wishes them luck in this worthwhile project.

JAMSAT expresses special thanks to the Japan Ministry of Postal and Telecommunication and JARL-HQ for this opportunity.

[The AMSAT News Service (ANS) would like to thank Mikio Mouri (JA3GEP) for the information used in this bulletin.]

WEEKLY OSCAR STATUS REPORTS

HR AMSAT NEWS SERVICE BULLETIN 260.06 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 17, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-260.06

Weekly OSCAR Status Reports: 17-SEP-94

AO-13: Current Transponder Operating Schedule:
N QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Sep 12 - Dec 19
Mode-B : MA 30 to MA 150 |<- OFF Oct 22 - Nov 07 for eclipses
Mode-B : MA 150 to MA 190 | max duration 2h 12m
Mode-BS : MA 190 to MA 218 |
Mode-S : MA 218 to MA 220 |<- S beacon only
Mode-S : MA 220 to MA 230 |<- S transponder; B trsp. is OFF
Mode-B : MA 230 to MA 30 | Alon/Alat 230/0
Omnis : MA 250 to MA 140 | Move to attitude 180/0, Dec 19
The battery charge state is of paramount importance during the eclipse seasons. As always the command team may have to have to make temporary changes to the published schedule. In that case we will try to minimize the inconvenience, setting Mode-B OFF from MA 230-256 in the first instance.
==========
[G3RUH/DB2OS/VK5AGR]

FO-20: The FO-20 command team has mentioned before that digital mode operation of the bird will be continued for a while because mode switching between digital mode (Mode-JD) and analog mode may cause some problem of onboard command system. [Kazu Sakamoto (JJ1WTK)]

AO-16: WD0E reports that as of 18-SEP-94 the team of WJ9F, WD0E and VK7ZBX is continuing the software relaod of AO-16. Last night the first stage was completed and PACSAT is under full software control and sending normal telemetry. Loading of the remainder of the software, including the BBS, will probably take a few more days. [wd0e@amsat.org]

LO-19: After of being out of service since May, LUSAT-OSCAR-19's BBS is now working again! Last May, for some yet determined reason, the BBS crashed during a pass over South America near a region know for its high-energy particle activity called the South Atlantic Anomaly. Last Sunday, 11-SEP-94, AMSAT-LU ground controllers were able to bring LO-19's BBS back on-line. [LW2DTZ]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO

area, WD0HHU @ N0QCU. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

The regular posting of Hams on Usenet to rec.radio.info is a good source of the current information you seek. You can easily search these files for New adresses for those hams that move up to new jobs. A lot of good effort goes into maintaining these lists. Check it out, they are probably on the same CDs you are reading.

In article <35fobg$com@dartvax.dartmouth.edu>,
Kenneth.E.Harker@Dartmouth.Edu (Kenneth E. Harker) writes:

> I got a flyer about the ARRL New England convention in Boxboro,
MA, next weekend. All it mentioned as far as costs were convention
tickets, but I am not an ARRL member, and I would only be interested in
going to the flea market. Anyone know how much that costs? Or do you
have to get a ($$$) convention ticket? Anyone know how much that would
cost at the door?

^^

Two years ago, the cost to get in was $8.00 for everyone. Flea market was
in the parking lot and there was no charge to go there. The convention is
inside and that's where the guest speakers and manufacturers were.

SB DX @ ALLBBS $OPDX.175
Ohio/Penn DX Bulletin No. 175

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 175
BID: $OPDX.175
September 19, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DX NEWS Letter, DL8AAM, DL8ZAJ, Japan DX News, JA0CVW, G3ZAY, K4CEF & Southeastern Cluster group, JA1IDY, JA6VZB, K2UFT, WD8E, VE2DR, VE3UOL and VE3CW for the following DX information.

1B, TRNC. Both KU0J and DK8FD have been active from here as 1B/. Activity has been mainly on CW, 17, 30 and 40 meters. Just a reminder that the DXAC recently rejected (by a 14 to 1 vote) a petition for new DXCC country status for the Turkish Republic of Northern Cyprus (TRNC). DXAC members stated that the TRNC did not meet DXCC Criteria Point 1, Government.

1P, PRINCIPALITY OF SEBORGA. Tom, DL8AAM (co-editor of the Germany Ham magazine "FUNKAMATEUR") will be active for 5 days starting around September 25th. His callsign will be IK/DL8AAM/1P and he will be using a TS-50S into a vertical. Tom's main purpose for going there, we quote, "To get first hand information about this territory, not all these second hand and commentary personal ideas, and I think the best way is to have a visit down there."

BV, TAIWAN. Fritz, WD8E, will be in BV-land the last part of October. Again this is a business trip and operations will be limited. He will sign BV/WD8E. His activities were not mentioned, but QSL to his CBA or via bureau. All cards from his last two operations have been answered.

CARIBBEAN DXPEDITION. Dieter, DL3KDV, will be traveling through the Caribbean and will be active from the following places: J6 - November 9-17th, J8 - November 18th through December 1st and J7 - December 2-12th. Dieter will be operating on CW/SSB/RTTY and on 160-10 meters.

C5, THE GAMBIA. Gary, C53HG, has been quite active lately on 17 and 20 meters CW/SSB. His activity varies on 17 meters, as early as 1330z and as late as 2130z. On 20 meters, look for him on either mode between 1830 and 2230z. His QTH is in Banjul and he has a stateside QSL Manager

of W3HCW.

INDIAN OCEAN TRIP. The Japanese Magazine FIVE NINE is sponsoring a trip through the Indian Ocean area to celebrate ten years of publication of the magazine. Participating operators will be Toshi/JA1ELY, Chao/JA1ETQ, Ted/JA1IDY, Mako/JA1OEM and Setsu/JL1UXH. Their tentative schedule at this point is as follows:

3B6 Oct. 14-22 by JA1OEM
3B6 Oct. 23-24 by JA1ELY, JA1ETQ, JA1IDY and JL1UXH
D68 Oct. 24-31 by JA1ELY, JA1ETQ, JA1IDY and JL1UXH
FR Oct. 25-30 by JA1OEM
FH Oct. 27-28 by JA1ELY, JA1ETQ, JA1IDY and JL1UXH
5R8 Nov. 1 -20 by JA1OEM

Licenses are in hand, but callsigns are yet unassigned except for 5R8HP. Activity will be mainly on low bands, WARC bands (plus the other normal bands), CW, SSB, RTTY and one other mode as of yet undecided. Rigs are two FT-850s and amplifiers. Antennas are a tribander, a duo-bander for the WARCs and wire antennas for 160, 80, 40 and 30 meters. No QSL Manager has been announced as of yet.

Two of these operators carried out a successful DXpedition previously to S79 as S79ELY and S79IDY and a CQWW Phone contest operation as S79J, making about 3000 QSOs despite frequent power outages.

KC6/V6/KH2, REP. OF BELAU, MICRONESIA, GUAM. Tosy, JA6VZB, will be active this week (September 22-26th) from KC6ZZ's QTH as KC6VW. Activity will be on 160-10 meters (including the WARC bands), CW/SSB/SSTV and participation in the CQ WW RTTY Contest (24-25th). From September 26-28th, Tosy will be active as V63BM from Micronesia but mainly on SSTV. He plans to send Micronesian underwater pictures which he has taken on his trip. On the 28th and 29th, Tosy will be active as AH0T/KH2 from Guam using CW/SSB/RTTY/SSTV. QSL via the bureau to JA6BSM (not JA6VZB). All QSLs will be issued automatically through the bureau.

KH8, SWAINS ISLAND (AMERICAN SAMOA). Lanny, W5BOS, will be active from this one starting around September 21st or 22nd. This will be a new IOTA for you IOTA chasers. His operation will only last for a few days and activity will be on CW/SSB.

PACIFIC DXPEDITION (Upate and change of plans.) Teo, DJ1RL, and Harry, DL6NA, will now be active from Rarotonga (ZK1) from October 19-22nd instead of Niue as reported in OPDX.173. Meanwhile, Harry has received his callsign of 3D2AN for the Fiji operation October 17-19th. ADDED NOTE: Harry wants to inform the DX community that he is not (and has never been) the QSL Manager for D44BS. QSLs go direct to D44BS.

S9, SAO TOME. Charlie, S92SS, says he is now on 160 meters but due to his work schedule he can only be active on Fridays and Saturdays. For U.S. and Canadian stations, begin looking for Charlie around 0000z on his favorite frequency of 1835 kHz.

QSL ROUTE CHANGE. Adam, N7VEW, announces he is the new QSL Manager for Randy, TJ1JR, in Yaounde, Cameroon. QSL via his CBA with a SASE.

XZ, MYANMAR. An interesting report from the "Japan DX News" states that JA1UT, JR0CGJ and G3NOM will be traveling to Myanmar to demonstrate SSTV. The three operators will arrive in XZ on September 17th. After a day of discussions and explanations of their intentions, the group will demostrate SSTV on the 19th. Activity will be on 14230 and 21330 kHz during their afternoon. They will also try to obtain permission to be active on CW/SSB/RTTY, if not for this trip, then maybe the next. The operators will leave Myanmar on the 20th.

ZF2, CAYMAN ISLANDS. Dick, K2UFT, will be active as ZF2SY from November 19-23rd. He expects to be operating in the late evening (0300-0600z) and early morning hours (1000-1400z), primarily CW, with emphasis on WARC bands, 80 and 40 meters. QSL to K2UFT.

ZONE 2. Chris, VE2DR (President of the Quebec HF Club), states that a schedule has been arranged for individuals needing to work Zone 2 stations. No dates were mentioned, but check the following times and frequencies (+/- few kHz): 3797 kHz at 0000z, 7070 kHz at 0100z and 14180 kHz at 0200z.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

From: turner@safety.ICS.UCI.EDU
Message-ID: <9409181525.aa27201@paris.ics.uci.edu>
Source record: 259944

James Laughlan Jr writes :

>FCC document PRB-1 which gives amateur radio stations a complete and
>total exemption from any tower law. They also stated that the ruling
>has been successfully defended in both state and federal courts.

This is WRONG. Absolutely wrong. It is important that amateurs
conduct themselves in a proper way before the local authorities
when representing ham radio. This isn't it. Do some research, such
as carefully reading PRB-1 to see that it doesn't exempt anyone from
anything. It clearly allows the local authorities to regulate your
tower especially with regard to safety, location and aesthetics.

Some Courts think that PRB-1 allows a town to deny a tower completely.
Your mileage may vary, since some Courts are sympathetic to the
proper spirit of PRB-1, which is clearly to allow towers within
some guidelines, but not to deny them altogether.

Please read the CQ article I cite in my other post on PRB-1 folklore,
at the very least. And seek professional advice - ARRL volunteer
counsel will give you some free time, enough to get you started down
the right road.

4297. The City and Tower Installations

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-18 22:37:00 UTC
From: don.turner@eabbs.com
Message-ID: <20604.73.uupcb@eabbs.com>
Source record: 259976

Hi Guys. I thought I pass along a short nightmaire that's happening to me right now. Thursday two weeks ago I came home to a note on my front door from the City Building Inspector. It seems he doing an investgation of my "radio towers" as he termed them. No doubt this is the result of one omy neighbors complaining. I have a very robust installation of a 46 foot tower which has been in place for 20, yes TWENTY years. It has withstanded the worst of weather conditions with a large tri-bander on it. Now it only has a TV antenna to support. The other tower to which he refers is a 40 meter groundplane. This was a good but temporary installation. Apparently this is the one that started all the BS.

The city expects me to get a building permit and submit an engineering study and design. I drafted a letter to the inspector explaining the installation in detail. I also expressed my interest in letting him view the installation, talking the issue over and making minor changes that he may see fit. I refused to let the petty esthic preferences of one resident force me into spending hundreds of dollars in an engineering study to prove the soundness of a time proven installation. I also said he and the city should not be cop to the "pettiness" of this situation. We will see how this turns out.

This brings about a request. Can any of you recommend a reference where the calculations are concisely described for doing this kind of stuff. No doubt, they will require a calculation of wind load, stress calculations of the tower and loads of the guy hardware and anchors. Can anyone help? ....WA6WRX Don

4299. The repeater operating on simplex freqs

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-19 00:57:49 UTC
From: jeffrey@kahuna.tmc.edu
Message-ID: <CwCqoE.KMo@news.Hawaii.Edu>
Source record: 259935

With regard to the topic of a named repeater that has
taken over two simplex channels, I submit the following
article that appeared over on r.r.a.policy; this very
important post states that the FCC recognizes the ARRL
band plans as within the `Good Operating Practice'
requirement as set forth in Part 97.

Jeff NH6IL
**********begin enclosed article**********

Article 13198 of rec.radio.amateur.policy:
From: bmicales@facstaff.wisc.edu (Bruce Micales)
Newsgroups: rec.radio.amateur.policy
Subject: Re: Regs Question
Date: Sat, 17 Sep 1994 19:55:41

dan@amcomp.com (Dan Pickersgill) writes:

>mjsilva@ted.win.net (Michael Silva) writes:

>>I seem to remember someone here once saying that the FCC considered
>>bandplans to fall under the "good amateur practice" clause of 97.101.
>>Does anyone know if indeed the FCC holds this view, or what, if
>>anything, they think of bandplans?

>That is the opinion of the FCC as expressed in a number of documents.
>I don't have the exact text handy, if someone does maybe they could
>expound on this (Hey ED! Are you lerking on this one?). If not I will try
>and find the time to get the documentation.

Yes, the band plans "are generated within the amateur ranks, not from the
desk of the FCC" (from 9th Edition, 1993, FCC Rule Book Guide to the FCC
Regulations. Published by the ARRL page 10-11).

The FCC also stated in a letter to a major repeater council "The only national
planning for the Amateur Radio service frequencies that has come to our
attention is that done by the American Radio Relay League.......In view of
this widespread acceptance of their band plans, we conclude that any amateur
who selects a station transmitting frequency not in harmony with those plans
is not operating in accord with good amateur practice." (same source as
before except on page 10-10).

As we all know 97.101 clearly states (at least part (a) of 97.101 does) that
we must operate in accordance with good amateur practice. This is effective
only if the FCC has not set aside a portion(s) of some band(s) for a specific
mode (this is from the book; same source as before). Look at the plans for
each band in Chapter 5 of the above book.

Sorry, just got a new copy of the FCC Rules and I was looking through it.

I just got back from the Peoria, IL hamfest. While I was there
I got into a very plesant conversation with three older, meaning
late fifties early sixties age, hams. If I didn't do anything
else except talk to these guys the trip would have been worth-
while. It was a lot of fun talking with these guys and I guess
we talked for a couple of hours all about ham radio.

Well, during this conversation, one of these gentlemen mentioned
something about a secret radio organization called the Wouff
Hong <sp?>. Is there really such an organization or were these
guys just pulling my leg??

If such an organization does exist, what's the deal with it??

Thanks -

de Bruce N9WKE

I have done simplex (ground to air, line of sight) on 1.2 GHz with only
1 watt and pretty skimpy antennas (ie, Yaesu FT911's with standard issue
3" or so antennas) over a distance of 30+ miles by our estimate. No
problems, very noise free.

In article <Cw7BnK.Gs2@freenet.buffalo.edu> you wrote:
: Date: Fri, 16 Sep 1994 02:45:19 GMT
: Don Burrows KO2J Communications officer for the Niagara County R.A.C.E.S.
: attended the public hearing and stated to the board the existance of
: FCC document PRB-1 which gives amateur radio stations a complete and
: total exemption from any tower law.

Jim, be careful here. PRB-1 is not so broadsweeping. PRB-1 states
there should be a balance between the interests of the governing
body (i.e. the zoning requirements) and those of hams. If the
antenna tower limit was going to be anything over 50 feet or so, you'd
have a tough time fighting it from what I've read before in other
cases around the USA.

Remember too, you want to win the war, your best course of action is
to work WITH the city council, not against it. Ask yourself what would
be reasonable for most local hams? 50 foot, 60?

: They also stated that the ruling
: has been successfully defended in both state and federal courts.

But, unfortunately, not always. If the city attorney does some
research, the attorney may uncover the cases that have gone favorably
for hight restrictions. Be careful here.

: The
: response from Councilman Michael Curtis was "ask us for an amendment,
: don't sue us". Town attroney Edward Jeand that PRB-1 needed to be looked
: at closer to see if he could recommend
: the amendment. The board also stated that there was no intention to
: restrict hams at all and there needed to be a law on the books to protect
: the town after a recent 3 year battle with a local radio station WTOR
: which at first proposed to the town to place 3 AM radio towers along

: Langdon Road in the Town of Lewiston. There was a long battle only to
: have it settled in N.Y.S. Supreme Court in favor of the radio station,
: which plans to run 5000 watts directed into Canada after the Canadian
: D.O.C. denied him a license. As of this time, Attorney for the town
: Edward Jesella is reviewing PRB-1 to see if any changes could be necessary.

This is encouraging. Work with the attorney for the city and the city
council. Don't take an adverserial position. They have said that
hams are not the problem. How high was the proposed AM antenna towers?
Would a hight limit lower than the AM tower hight be agreeable?

I'm both a councilman in my home town (Mount Olive Township, NJ) and
an ARRL Local Government Liason. Let me give you some inside
perspective on elected officials...they all have egos a mile wide,
they want to play the politically safe thing to do. Show them that you
want to work with them and you have a far better chance of succeeding
than trying immediately to go to court. By going to court you
threaten their entire position (i.e. their opposition t the AM
towers). Why not suggest that any tower limit not apply to residentially
zoned areas. That is, the limit should be one of a commercial
zoning area only (the AM towers would certainly be a commercial
endeavor and require their placement only in a commercial zone IMHO).

Again, TRY to work with the city, not against. I can't stress that
enough. Be right in principle and losing the battle isn't something
you want to see happen.

If you wish to discuss this by telephone, please don't hesitate to
call me: Home 201-691-8116 evenings, Office 201-829-2879 days

Greater than 2 MeV Electron Fluence for 18 SEP is: 1.5E+08

SYNOPSIS OF ACTIVITY

Solar activity remained very low. Region 7779 (N17W01)
decayed slightly. New Region 7780 (S06W74) emerged at a
moderate pace and was a small D class group at the end of the
period.

Solar activity forecast: solar activity should continue
at a very low level. There is a possibility of a small C-class

flare from Region 7780.

The geomagnetic field was quiet. Energetic electron fluxes
were at moderate to high levels.

Geophysical activity forecast: the geomagnetic field
should be quiet to slightly unsettled for the next three days.

Event probabilities 19 sep-21 sep

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 19 sep-21 sep

A. Middle Latitudes
Active 15/15/15

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
---
17 Sep: 2036 2045 2057 B4.0 SF 7779 N17E13 III

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>balance.

How true it is. I lived on Terceira Island in the Azores for three years while stationed at Lajes Field with the USAF. I operated under the calls CU3LF and CU0WPX. At the time, I was the only CU ham on certain modes. Whenever I got on, a pileup usually developed quickly. I operated a lot of the major contests to give everyone a shot at CU, and in the process received thousands of QSL cards - many more than I would have ever sent for on my own. Fortunately, most of the direct cards included an SASE but a significant number did not. The ones who didn't got put on the bottom of the pile and were answered via the bureau. I spent a not-so-minor amount of money getting cards printed, and on a GI's pay I was not in a position to fund all the return postage as well. There's a basic supply-and-demand law at work here: DX stations receive many more stateside cards than they need or want. If you want a direct reply, expect to pay for it.

73, Mike KB3RG/CU3LF/and a few others...

Be careful...PRB-1 DOES NOT "give amateur radio stations a complete
and total exemption from any tower law"!!! PRB-1 only says that
local regulatory authorities must make "reasonable accomodations"
for amateur communications. This has been interpreted in widely
varying ways by zoning boards. There are precedent-setting cases
on BOTH sides of this issue...watch you tell these people because
you may end up hurting your cause more than helping it.

Message-ID: <BENCZE.94Sep19075418@elvira.stanford.edu>
Source record: 259957

Well, a 12 amp supply will run about $100 new (Astron, etc), but you probably can get one for $50 or less at a ham-fest, expecially if you're willing to fix it! Older linear-type supplies (ie, non-switching) are very simple and easy to diagnose and fix as long as the transformer is good. Keep an eye on rec.radio.swap; folks are always selling them there...

One word of advice, if you feel that you'd like to try out HF operation sometime, get yourself a 20A supply, then you'll be able to run you HF rig off of it, also. Might save some $$$ in the long run.

73!

Um, drive a Tesla coil with an AM "transmitter". Play with the microphone. You find yourself with a cute little "sparky" at the discharge end of things that produces a rather tinny sounding replica of the modulation applied to the "transmitter". (Fortunately the statute of limitations has run out on that one a LONG time ago. I hope it caused no interference that day I tried it useing a G-76 on 80Meters....)

Roger Harrison, NSW WIA Secretary, resigned from the WIA (NSW
Division) Council on Friday evening 16th September.

------------------------------------

Club auction well attended
--------------------------

This is not a digital item -- just an item about the St George
club's auction in Sydney yesterday. This is a very well-run
affair, the auctioneer (whose name escapes me for the moment)
does an excellent job, and the organisation is slick
throughout.

The auction is a regular item on the club calendar and is the
Bill Shakespeare Auction to honour a club member who put a lot
of effort into the club over the years, but who has now
retired from active participation, leaving it to the younger
ones. It is a good social event as well.

For local or near Sydney amateurs, mark your calendar for this
month next year -- some very good bargains to be had.

---------------------------------------

CQ/RTTY Journal WW RTTY Contest September 24-25
-----------------------------------------------
CONTEST PERIODS: STARTS at 0000 UTC Saturday, and ENDS at 2400
UTC Sunday, a total of 48 hours. NO REST PERIODS REQUIRED for
any entries.
-------------------------------------------------------------
```

Part 3

CONTEST ENTRIES AND LOGGING INSTRUCTIONS: CQ WW RTTY DX logs and forms should be used to facilitate scoring and checking.

All logs must show:

1. Time in UTC.

2. All sent and received exchanges are to be logged (callsign, RST, Zone, Coutry, State/VE area, points claimed).

3. Indicate State/VE area, and country multiplier ONLY THE FIRST TIME IT IS WORKED ON EACH BAND.

4. Use a separate log sheet for EACH BAND.

5. Have a list of stations QSOed on EACH BAND (a DUPESHEET).

6. Have a MULTIPLIER CHECK SHEET for EACH BAND.

7. An overall SUMMARY SHEET showing total QSOs, points, Zones, Countries, and State/VE areas worked.

8. Each entry must be accompanied by a signed declaration that all contest rules and regulations for amateur radio in the country of operation have been observed.

DISQUALIFICATIONS: Operating in an unsportsmanlike manner, manipulating scores or times to achieve a score advantage, or failure to omit duplicate contacts which would reduce the overall score more than 2 per cent are grounds for disqualification. The use of non-amateur means such as telephones, telegrams, etc., to elicit contacts or multipliers during the contest is unsportsmanlike and the entry is subject to disqualification. Actions and decisions of the Contest committee are official and final.

AWARDS: Plaques will be awarded to the first-place finishers in each of the operator classes. Certificates will be awarded to second and third. Certificates will be awarded to the first-place finishers in each DX country.

To be eligible for awards, a Single Operator must operate a minimum of twelve hours, and a Multi-Op entry must operate a minimum of 18 hours.

DEADLINE: All entries must be postmarked no later than December 1, 1994. An extension may be given if requested.

Mail logs to:

Roy Gould, KT1N
CQ WW RTTY DX Contest Director
Box DX

Stow, MA 01775
USA

That's it, folks. Have a great contest.

IPS WEEKLY REPORT
---
2 - 15 SEPTEMBER 1994

ISSUE No 36

DATE OF ISSUE: 16 SEPTEMBER 94

INDICES:

DATE 09 10 11 12 13 14 15

ARLD056 DX news

The items in this week's bulletin are courtesy of Steve, W9NUF, Tedd, KB8NW, the Ohio/Penn DX Bulletin, Bob, W5KNE, QRZ DX, Chod, VP2ML, The DX Bulletin, Mako, JF2RZJ, Rasti, HB9IIL, ZB2IB and VQ9QM. Thanks.

RWANDA. Chris, 9X/F5PGP, has been spotted on 14195 kHz at 2030z. QSL via F5PYI.

EUROPA. FR5HG/E has been very active on 7005 kHz around 0300z. QSL via F6FNU.

GUINEA. Dragan, 3XY0A, is spotted on CW and SSB frequently. QSL to PO Box 160, 11070 Novi Beograd, Yugoslavia.

ZAIRE. Gus, 9Q5TE, has returned to Zaire and is active again. QSL via SM0BJF. G3MRC/9Q5 has been worked in 20 meter CW around 2200z.

MONGOLIA. JT1CS has been very active this p[ast week on 20 meter CW and RTTY between 1230 and 1430z. QSL to Bat Erdene, Box 125, Ulan Bator 320, Mongolia.

CHAGOS. VQ9QM says he will be active on 160 meters Sunday evenings. No specific times or frequencies were given, but last season he was on 1827 kHz and listening around 1833 kHz at about East coast sunset. VQ9TP continues to be active,

frequently on 18079 kHz between 1330 and 1430z. QSL via N5TP.

ARUBA. Rasti, HB9IIL, will be in Aruba from September 16 to 23. He plans to operate as P40RS and/or P4/HB9IIL mainly on 15 and 20 meter SSB, during local evening hours. QSL via the bureau or direct with SASE to PO Box 23, 1015 Lausanne 15, Switzerland.

BELGIUM. Stations from are begun using the ''OS'' prefix to celebrate the 50th anniversary of the liberation of Belgium. They will use the ''OS'' prefix until December 31st. Also, look for special event stations OO50USA, OQ50USA, OR50USA and OS50USA on September 24 and 25.

PACIFIC DXPEDITIONS. Teo, DJ1RL, and Harry, DL6NA, will be active from several spots in the Pacific. They plan to sign their home call portable from the following locations:

Hawaiian Islands, KH6 - From October 5 to 9. Nauru Islands, C21 - October 10 to 17. Fiji Islands, as 3D2FT - October 17 to 19. Niue Islands, ZK2 - October 19 to 22. French Polynesia, FO - October 22 to 28. Activity will be on the normal DX frequencies. Teo will be active mainly on CW while Harry will be handling the SSB chores. DJ1RL will be especially active on 80 and 160 meters. Look for him on 1827/1832 kHz for top band QSOs. QSL via their home calls or the DARC bureau.

ANDAMAN ISLANDS. VU2SMN says that he will conduct an operation from the Andamans at the end of October 1994. There are no further details or info available as of this time.

UGANDA. Paul, WF5T, will be active as 5X1XT from November 1 to 31. Activity will be on 80 through 10 meters CW and RTTY. QSL to his CBA.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA at VK2RWI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2RWI. Email addresses for the Broadcast Officer are :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what

you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes the broadcast for this morning/evening.

PRESIDENT'S MESSAGE VK2 DIV.

This is Michael Corbin VK2PFQ

Last Friday night 16th September, there was a meeting of the Divisional Council at Parramatta. At 18.55 I received a fax message at the Office from Roger Harrison....It was his resignation.

The letter was read at the meeting as the first agenda item. The council resolved to accept Mr. Harrison's resignation but added that it did not agree with reasons specified therein. As far as I was concerned, that was that. I had determined that I would only mention the fact in passing on today's broadcast. Bob Lloyd Jones VK2YEL, for reasons best known to himself, decided that all the world should share the contents of this letter even thought it was addressed to "The Council" of the WIA ......Consequently, he put the letter on packet. It is for this reason that I read the letter on this Broadcast.... complete and unabridged.....

The Council
Wireless Institute of Australia
New South Wales Division
PO Box 1066
PARRAMATTA NSW 2124

I formally tender my resignation as a Councillor of the WIA, NSW Division, effective immediately.

I do this after due consideration of the prevailing situation, events since the AGM in April, knowledge of actions being embarked on by the President and certain Councillors, and following careful consideration of legal advice.

I have no confidence in the management ability and practices, nor the business acumen, of the majority of Councillors.

I have seen abundant example of this, which has led me to this view. I have already highlighted not only questionable practices and actions, but those which transgress the law, as well. I am aware from recent actions that this will not only continue, but escalate.

There are Councillors who show utter contempt for the wishes of the majority of members and the interests of the Division, and contempt for the principles of the hobby. They show contempt for the Division's Articles of Association and contempt for the Corporations Law. Five Councillors have shown despicably shabby contempt for the proper treatment of the Division's highly regarded, loyal, honest, hard-working and

efficient employee, Margaret Morris.

Under the circumstances, where I am aware that other Councillors are in dereliction of their duty to the principles of the hobby, the members, the Division, the Articles and the Law, I feel I cannot carry out my own duties to the extent necessary, given the situation.

When Margaret Morris returns, I will cooperate with her to 'tie up loose ends' so that her job can be carried out. I am forwarding my keys under separate cover.

Yours sincerely

Roger Harrison VK2ZRH

I make no comment as to the contents of his letter. However, on behalf of the Division I would like to offer sincere thanks to Mr. Harrison for the, positive things, he did whilst a member of the Divisional Council over the past years.

Mr. Harrison's resignation has prompted a reorganization of the Office Bearers of the Caretaker Divisional Council. Firstly the Council decided, as is normal under the Memorandum and Articles of Association, to fill the casual vacancy created by this resignation. The next eligible person is Tony Liolio VK2ZLT. I contacted Tony yesterday and he indicated that he would be delighted to fill this position on Council.

The position of Office Manager, previously filled by John Robinson, has been taken over by Pixie Chapple VK2KPC. Parramatta Security Office Portfolio of Security Officer, currently occupied by Jim Walker VK2XJW, has been given more "teeth". The Council decided that Jim should be able to act independently. If keys needed to be cut he should be able to get them cut, without delay. Having a title is one thing, lacking authority, another. The position of Secretary will be decided next Friday week, when we are up to strength. It's only fair that ALL nine Councillors should have a say in who they believe should have this job.

I believe that we have a golden opportunity to put the Institute back on track. Accordingly I call for the support of all members. Come on Bob. That means you too..... and what of you Mr. Kentwell? How about some support from you as well. Let's look at your latest packet for some inspiration and I quote...

"for the rest, they have made me realise that we, the Radio Amateurs who enjoy C.W.,ATV,FM,SSB, home brew of same and all our activities are at a turning point...." Well said Julius. If what you say, is, fair dinkum, then..... we're counting on you for support.

How about us all being on the same side for a change? . It's really only just a hobby after all.

I think the futility of all these goings on were expressed admirably in a recent packet from Steve VK2ESL of Walcha, N.S.W. I'll like to share it with those who don't have packet radio as I believe Steve has summed it all up pretty well.

His packet originated as a result of some "messages" entitled "Reason for N.S.W. Drought" and "not quite right TRASH."

From: VK2ESL
To: WIA @ VKNET

I have just come in from what has been another pretty miserable day here on the farm. It's Friday, and that is stock feeding day, so it's up to the silo with the feed cart and crank up the small auger to fill the bin once again.

The first mobs of sheep to be fed are lambing ewes, the first thing to greet me as I drive into the paddock is the sight of the body's of dead lambs abandoned by their already weak mothers. I manage to get the feed out without a starving ewe falling beneath the wheels of the vehicle.

The next job is to check the dams. Some are dry but most have a small puddle in the middle of a sea of mud, the once flowing creek is all but dried up and often I have to pull sheep out of the mud as they are too weak to get out themselves.

Today I also had to sell more sheep in an ongoing program of destocking as continued hand feeding will eventually exceed the commercial value of the animal and also dry up my financial resources.

I was a bit lucky as I sold about 75% of the mob, and gave the rest away to the same bloke to save me the job of shooting them.

This afternoon I came home and the mailman had left me a pile of bills and the dreaded bank statements.

That basically was my day.

The one thing that lifts me up a bit is to get out here in the shack and use my amateur radio gear to chat to others and have a laugh or two, or discuss the latest antenna project or plans for our local packet network, just something to cheer me up and forget for a little while the catastrophe that is taking place right outside my door.

So!! What do I see this evening when I looked through a few messages on my local bbs? 2 messages, one titled "The real reason for drought" and the other in reply "not quite right."

Now these two messages used drought in a jokingly way to continue their pitiful arguments re: the WIA.

I think the two fellows concerned should be ashamed of themselves for treating drought as a bit of a joke.

It might be a good idea if you people get off your backsides and leave your poisoned word processors alone for a while and get out in the bush and have

a good damn look about.

You know, Amateur Radio is one of the greatest interests one can have, especially out here in the bush. It provides us with the means to stay in touch with ever changing technology and also makes it easy to communicate with others with similar interests.

For Gods sake, give this WIA thing a bit of a break and lets all be mates for a change. Compared with what we out here are going through the arguments that have been raging on in N.S.W. for the last year or so are to me are quite mundane.

Steve....VK2ESL

I'll leave these sobering thoughts with you.

See you next week.

Divisional News

New Broadcast time

Please note : From Sunday 2nd October the morning broadcast will commence at 10 am.

WIA Trash and Treasure sale

Sunday the 25th September is the date for the next Trash and Treasure sale.

Opening time for sellers is 1 p.m. and for buyers is 2 p.m.

The cost for sellers is $5.00 for W.I.A. members and $10.00 for non members.

There is no way to predict what will be for sale, but there is always some treasure.

See you there. Roger VK2ZIG & Cesar VK2TCM.

Broadcast Roster

Steve Pullen requests that all members of the Broadcast roster team advise him urgently by the end of this coming week of any likes, dislikes, desires, exclusions, etc, etc.. He's currently preparing the new three-monthly roster and he'd like to hear from you if you have any problems with certain dates or alignments.

Any budding engineer or announcer is invited to contact him -- we have, of course, a few vacancies, particularly in relation possibly to the earlier start at 10 am.

If you need to contact Steve please do so -- call him on his home number: 476-1845.

WICEN News

This is a reminder that the Sydney WICEN 2m repeater has had its cavities re-aligned, and objective reports are welcome; perhaps as a result the regular Sydney WICEN net can start again. Unfinancial members are reminded that their membership will officially terminate on 30th September.

Hunter meetings are held on the third Monday of the month at the Emergency Operations Centre, corner of Elizabeth and Hannel Sts, Carrington, commencing at 7pm. The September lecture, held tomorrow, will be in the form of various videos of interest from Mt Macedon, the Australian Emergency Management Institute.

Looking ahead to October, there is the VRA Annual Conference on the weekend of 8-9th October, to be held in Wagga, and further details will appear in a later broadcast. As a result, the Management Committee meeting next month will move to 15th October, which unfortunately conflicts with JOTA. The "Hawkesbury Classic Paddle" is on 22nd-23rd October, and the WICEN Co-ordinators Conference is on 29-30th October, at Bathurst.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30 pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

WICEN (NSW) Inc. operates a telephone BBS, and it is accessible at speeds from 300 to 14,400 bps on (02) 888-2763. Brett VK2XMU is the "Sysop", and all listeners are invited to use it. Many programs, such as "virus scanners" and "PGP", are available for downloading.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

News briefs

The Great Australian Science Show is currently running at Sydney's Powerhouse Museum. The show is a collection of 30 interactive exhibits,including the "Starlab" mobile planetarium, a "cyberspace" exhibition entitled "Artists thinking about science", and an interactive CD-ROM demonstration curiously titled "Typhoid Mary". The exhibition closes this Wednesday.

Texas Microsystems has produced for the United States Army prototypes of a "combat-ready" hand-held personal computer. Christened "The Grunt", the 486SZ-based PC is part of a long range plan to equip soldiers with advanced communications facilities in the battlefield.

The US Army may have been upstaged however, at least where size is concerned; watch manufacturer Timex, is in a joint project with Rank Xerox and Microsoft is to launch a personal computer in a wristwatch. The computer is one of a series of wearable computer-based products coming out of Japan; earlier products include wristwatch-sized television sets and mobile phones.

For those who really can't bear to be away from their computers, Spacial Systems integration of Melbourne has previewed "the first truly wearable, ruggedised portable, fully integrated PC". What all that means is that this computer has a variety of miniature keyboards, interfaces to a hand-held cellular fax, and a head band with a built in video display, and voice recognition, among other things ... with special adaptors, it can even be used under water. The company expects to sell the system to the emergency services and military and industrial users.

Not in my backyard ... please! Most of us remember the heavenly sight of the comet Shoemaker-Levy 9 colliding with the planet Jupiter, and many Amateurs noted unusual signal patterns on the HF bands as the comet fragments entered Jupiter's magnetosphere. But one important question has been doing the rounds since the big collision, namely, "could it happen here"? The answer is "quite possibly" ... last month comet Machholz-2 was discovered by Californian amateur Astronomer Don Machholz. He estimates that next month, the comet's 6.8 year orbit will take it within 15 million kilometers of Earth; further observations will be needed will be needed to determine how close the comet will get on subsequent passes. Astronomer Rob McNaught of the Anglo-Australian Observatory at Siding Spring say that Machholz-2 is only one of 16 comets known to cross Earth's orbit, and that there are only 13 astronomers world-wide looking for such comets.

And finally, a new FM radio station has started, serving Sydney's gay community. The station is one of a growing number of "narrowcast" stations, serving special interest groups. The station's owners have chosen the rather tongue-in-check callsign of 2GAY-FM; it is not known how the people over at 2DAY-FM feel

about another station with a similar callsign. One wag writing to the Sydney Morning Herald suggested we might soon have a talkback ststion called 2SAY-FM, a subscriber-funded station called 2PAY-FM, among others ...

News Briefs looks at communications new items that appear in the mainstream media. Thanks this week go to "The Australian" and "The Sydney Morning Herald". If your local or regional paper runs an item of interest to Radio Amateurs, why not send a clipping to the Divisional office?

Richard Murnane VK2SKY

IPS WEEKLY REPORT

SUMMARY OF ACTIVITY

SOLAR ACTIVITY WAS LOW 11TH SEPTEMBER AND VERY LOW FOR THE REMAINDER OF THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH (WA) WAS UNSETTLED TO ACTIVE ON 9TH, QUIET TO UNSETTLED 10TH-12TH, AND 14TH, AND QUIET ON 13TH AND 15TH SEPTEMBER. THERE WAS A SHORT PERIOD OF MINOR STORM LEVELS ON 9TH, AND A BRIEF ACTIVE PERIOD WAS OBSERVED ON 10TH.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE NEAR PRE-DICTED MONTHLY VALUES THROUGHOUT THE PERIOD.

FORECAST FOR THE NEXT WEEK (16 - 22 SEPTEMBER)

SOLAR: VERY LOW.

GEOMAGNETIC: QUIET TO UNSETTLED.

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES THROUGHOUT THIS WEEK.

COURTESY OF IPS RADIO AND SPACE SERVICES, SYDNEY

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

CLUB NEWS

Wagga Amateur Radio Club news

The Wagga Radio Club meets on the last Friday of each month at 2000 hrs at the SES building Ferneleigh Road. The club celebrated its 26th year of operation and this was celebrated with a dinner at the local RSL club and was a great success.

The club runs two nets, the 1st net is on each Sunday at 1200 noon on 7.165MHz. The second net is run every Tuesday night at 2000 hrs on 3.605. We run, at the moment, 4 awards; these being the Wagga Basic Award followed by Silver, Gold and the 360 Award. This last award has only 32 amateurs qualified for it.

We finally have packet up and running here in Wagga and thanks has to go to John VK2BXD, Mike 2DAI and Allan 2KAW for all the work they did to get it running. If anyone wishes to contact any member of the club they can do so through the three above members, also Sid 2SW is now up and running and having a ball with this mode.

The callsign for Wagga is as follows:

VK2BXD-1 44.136.71.1 or @W.VK2BXD.AMPR.ORG [???]

Alternatively you can log on to VK1BUD-5 and Wagga is listed as a port.

We would like to apologize to any Amateur passing through our area for any trouble that they experience with our Ch3 repeater. We are suffering from severe intermittent interference problems, but we have work in the pipe line to correct this as soon as possible. Once again we offer our apologies for any inconvenience that this may bring about. Ch50 is usually monitored while these problems exist.

73 Paul VK2MAL
President

Wahroonga Historical Radio Association

An important and historical event in the development of world wide communications by wireless occurred on 22nd September, 1918 when the first direct wireless messages from Great Britain to Australia were received at Wahroonga. These messages were transmitted from Wales using a 200 kiloWatt spark gap transmitter on 14,300 metres. The Wahroonga Amateur Historical Radio Association, in conjunction with The Dragon Amateur Radio Club of Wales, will be commemorating this event next Thursday, 22nd September working a special event station with the callsign VK2WAH for 24 hours commencing at 10.00 a.m. Eastern Standard Time. Depending on a number of operators on hand, frequencies will be: voice 3.570, 7.070, 14.170, 21.170 and 28.570; C.W. 14.035; locally the call may be heard on 2 metre FM repeaters and on Packet. The Dragon Amateur Radio Club using the callsign GB2VK will be operating at the same time on 14.175 and 21.175 voice, and 14.020 and 21.020 CW.

A QSL card may be obtained for one 2 way contact. Australian Amateurs should send a stamped and self addressed envelope with their QSL card to W.A.H.R.A., PO Box 600, Wahroonga, 2076, or via the bureau.

For further information contact Jo Harris, VK2KAA on 02 489-4393 or on Packet.

David Ramsay, VK2KLX
Secretary

Norther Corridor Radio Group Hamfest '94

Perth Western Australia

The Northern Corridor Radio Group, (N.C.R.G.), in the northern suburbs of Perth will hold the 6th annual Hamfest at the Les Hansman Centre on Walter Rd. Morley on November 5th at 10.am.

With a record attendance last year and even more to offer this year, the N.C.R.G. is hoping for an attendance of over 1000 for Western Australia's premier hobby electronics and communications event.

This year, the majority of Perth's hobby radio retailers will have displays along with special interest groups such as the QRP, VHF, Microwave/UHF, Digital, Repeater and ATV groups as well as the W.I.A. bookshop.

All the major radio manufacturers will be represented including Icom, Kenwood, Yaesu, Barrett, Codan and Tait as well as some big antenna manufacturers such as Terlin, Venross and Antenna West. It is also envisaged that most retailers will have "specials" on for the Hamfest so why not save that purchase for this occasion. There will also be food and drinks on sale throughout the day.

In addition to the commercial and special interest displays, there are the car-boot sales in the car park outside the hall which proved so popular last year.

Entrance fee this year, remains at $2.00 per person including a ticket for the door prize whixh will be drawn before the close of the day's festivities.

Anyone wishing to join the large group of people holding stalls at this year's Hamfest should contact Duncan Page on 09-2401933. Trade stalls will be charged at $20.00 each and tables can be rented at $5.00 each (max. of 3). Car-boot stalls will attract a fee of $10.00 per car.

If you are considering a trip to the "State of Excitement", why not schedule it for early November and come meet the largest gathering of friendly hobby radio enthusiasts in W.A. The Les Hansman Centre is just 7kms from the centre of Perth and ample accommodation should be available at this time of the year in the

city centre.

A listening watch will be kept on Channel 4 (146.800 Rx/146.200 Tx) by the N.C.R.G., (VK6ANC), through the day for the benefit of our visitors.

Further enquiries can be made to Steve Kennedy VK6RK on 09-3057566 or to Duncan Page on 09-2401933.

from Steve Kennedy VK6RK

Fishers Ghost Amateur Radio Club

There will be a meeting of members of the Fishers Ghost Amateur Radio Club, on Tuesday 29th September at 7.30 p.m. at the Campbelltown High School, Beverley Road, Campbelltown.

The speaker will be Jack Heath, who will deliver a lecture on phase locked loops.

There will also be a trash and treasure sale that evening.

From, the Secretary, Peter Kloppenburg VK2CPK

Blue Mountains Amateur Radio Club Inc.

A note for your diary ...

The Blue Mountains Amateur Radio Club is organising a Computer and Communications Show on Saturday 27 November. National and regional companies have indicated an interest to display their products and there will also be a flea-market for the buying and selling of second-hand equipment.

The date again -

26 November at Springwood High School in the beautiful Blue Mountains. Bring your family and make a day of it - refreshments will be available throughout the day.

Further details will be announced in due course.

Alex VK2KAS
B.M.A.R.C. Publicity Officer

Waverley Amateur Radio Society

The next monthly meeting of the Waverley Amateur Radio Society will be held on Wednesday, 21st September at Waverley Council's Multi-Function Centre located at 31 Spring Street, Bondi Junction, beginning at 7:00 pm.

The main topic for the evening will be a talk by Aub Topp (VK2AXT), the W.I.A. Librarian who is to describe the facilities offered by the library.

Full details of the Society's new permanent premises which will be open next month and allow 24 hour access will be announced at this meeting to which all are welcome.

Simon Buxton - VK2EII - Publicity Officer

Summerland Amateur Radio Club

The next outing for members, families and friends, will be a picnic BBQ at our repeater site, VK2RIC, at Parrot's Nest. If time permits, a mini working bee will be held to improve the performance of our "Sally" (VK2RIC).

Bring your own everything and meet at the base of the tower at 11am on Sunday 26th September.

More details from Steve, VK2JSM, 066-626693, or Ric, VK2EJV, 066-895137.

Graeme, VK2GJ, Publicity Officer

VHF-UHF DX Group

This is a final reminder that the next VHF-UHF DX Group meeting will be held next Tuesday 20 September at Amateur Radio House. This meeting will be an equipment workshop on the construction of high power linear amplifiers and low noise preamplifiers.

Working examples of linears and preamplifliers will be exhibited to demonstrate how practical construction problems are solved.

All listeners are invited to attend.

The Group also sponsors activity nights on 144 MHz on Tuesdays and 70 centimetres on Thursdays.

Why not check into the Group's Sunday evening net on 146.5 MHz FM for details of Group activities. The Sunday evening net starts at 8:15 pm.

Submitted on behalf of Richard Sourlie VK2ARS

Liverpool and Districts Amateur Radio Club

The Liverpool and Districts Amateur Radio Club held its Annaua General Meeting last Tuesday night and the outgoing committee wish to welcome our new office bearers:
Paul VK2UPB is President and Repeater Officer. Brad VK2QQ is Vice-President and Publicity Officer, Bob VK2IRG is our Secretary and Dave VK2KLU is our Treasurer. The Committee's number are also made up with Hoss VK2ICE and Mike VK2KSI. Congratulations gentlemen!

Wayne VK2TBF surprised us with a donation from our repeater users. It seems he's been passing that ugly hat of his around and

collected a sizeable sum from the regulars on our 6625 repeater to help with its upkeep and improvements.

The AATC has also made a donation to LADARC for its use of the repeater and the money was most gratefully received. Thank you AATC, thank you Wayne and thanks to our repeater users for the support! We really need it!

Brad VK2QQ
Publicity Officer

Subject: 42nd Annual N.E. DXCC Dinner
To: info-hams@ucsd.edu

Hello all,
On Sunday November 13th, 1994 we will have the NE DXCC Dinner
```

in Dedham, MA. This will be the 42nd annual event for all those interested in DX and related aspects of ham radio.
The early birds will arrive by 10:30 for coffee and danish, we will have a couple of guest speakers for the morning session. DXCC and WAZ card checking will be done on site. Dinner will be buffet style at 1:30 with our guest speaker, Bob KK6EK of the 3Y0PI DX-Pedition. Things usually break up by 4:00pm. There will be a raffle with many prizes as well as the grand prize being a trip to Dayton 95.
Dinner tickets will be $15p.p.
Please contact Tony WA1MWN for reservations, seating is limited so call early.

Make check payable to Tony Penta, please put in memo space DXCC Dinner and mail to
66 Pleasant Ave.
Lynnfield, MA 01940
617-334-5770 WA1MWN@K1UGM.MA or WA1MWN@K1EA or tony@shore.net for more information.

Thanks and 73

Subject: Problems with Kenwood TH-78A Modifications
To: info-hams@ucsd.edu

Hi All,
I just bought a new TH-78A and tried to do the "Crossband Repeater" and
"Beyond Caps/Mars Modifications".
After trying different diode/wire configurations I ended up with:
D3,D4, and W2 removed.
Now I can
RX 50-180MHz, TX 136-180MHz, (VHF)
RX 300-400MHz (VHF)
RX 400-512MHz, TX 40-512MHZ (UHF)
But still, I can not receive from 800 to 950 MHz.
Is this feature not available anymore? Can anybody verify this?

I also tried earlier suggested modifications like
D3,D4 and W1 removed, and
D4,D5 removed
both gave me only extended receive with no extended transmit.

Another curiosity: My manual describes the crossband repeater function
for the standard configuration (No diode/wire removed).

A second question: Can someone verify whether the only difference between
a TH-78A (American version) and TH-78E (European version) is that in the
"E" version D2 is removed? Do I need an extra tone module for 1750Hz in
order to get into European repeaters or is this a done deal after removing
D2?

Thanks a lot in advance,

Arne

>With regard to the topic of a named repeater that has
>taken over two simplex channels, I submit the following
>article that appeared over on r.r.a.policy; this very
>important post states that the FCC recognizes the ARRL
>band plans as within the `Good Operating Practice'
>requirement as set forth in Part 97.
>
>Jeff NH6IL
[snip]
>Yes, the band plans "are generated within the amateur ranks, not from the
>desk of the FCC" (from 9th Edition, 1993, FCC Rule Book Guide to the FCC
>Regulations. Published by the ARRL page 10-11).
>
>The FCC also stated in a letter to a major repeater council "The only national
>planning for the Amateur Radio service frequencies that has come to our
>attention is that done by the American Radio Relay League.......In view of
>this widespread acceptance of their band plans, we conclude that any amateur
>who selects a station transmitting frequency not in harmony with those plans
>is not operating in accord with good amateur practice." (same source as
>before except on page 10-10).

This is what the ARRL says, but what they neglect to mention is the
firestorm that followed those statements. As most of you know, the
country is divided on 2 meter band plans with nearly half going one
way, and the others going the other way, IE 15 kHz inverted splits
versus 20 kHz upright splits. What's not reported here is how rapidly
the FCC backpedaled from this position that the ARRL plan is *the*
plan once that situation was made known to them. Now they understand
that band plans are *regional*, and not handed down from on high by
the ARRL. Of course you wouldn't expect to see that in a ARRL publication.

Hi!

The inventors of the BAYCOM modem, also known as poor man's
packet, have just come up with a 9K6 modem. It connects to
the printer port and costs aroune 150 $ or so.

May become a good alternative to a TNC.

>If such an organization does exist, what's the deal with it??

Yes, such a secret society exists within the ARRL. Like the
Illumini, the Trilateralists, and the New World Order, this
secret society's mission is to undermine freedom, truth, justice,
and the American Way by imposing a rigid tradition on amateur radio,
centered around worship of certain beeping sounds.

Yes! My call is N4ZBB, there are clubs in Raleigh, Cary, Durham, Orange County (Chapel Hill) - all parts of the "triangle". There is a Newsgroup that many triangle hams watch called 'triangle.radio'.

I belong to the Raleigh club, which consists of 350-400 members.

Also, the some businesses in the area also have employee hams clubs, like the company I work for.

If you have any further questions, please e-mail me at n4zbb@toybox.raleigh.nc.us

Hi, everybody.

I would like to know if any one can suggest the architecture of a
wideband channel sounder, any suggestion are warmly welcome.

Thanks a lot!

Regards,
David.

4323. Restrictive Covenants: I can't have *any* antenna?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-19 13:40:53 UTC
From: "Michael R. Dow" <R1156C@WACCVM.CORP.MOT.COM>
Message-ID: <1994Sep19.134053.4255@newsgate.sps.mot.com>
Source record: 259959

My wife and I are looking at a new house... Its a nice house... Nice neighborhood, nice neighbors... You know, the kind of house that's just... well..... Nice. EXCEPT!

There's this one little clause in the deed restrictions:

GENERAL RESTRICTIONS:

Antennae: No exterior radio or television antenna or aerial or satellite dish receiver, or other devices designed to receive telecommunication signals, but not limited to radio, television, or microwave signals which are intended for cable television, network television reception, or entertainment purposes shall be erected or maintained, except by Declarant, without the prior written approval of the architectural review committee.

Pardon me, but I thought this wasn't legal? Can someone post, email or point me to relevant legal precedent which makes the clause invalid?

Thanx,

Michael R. Dow

Money.
It would cost billions of dollars to replace all the AM radios in the
aircraft of the world with FM. Pilots would reject the idea because they
would see no good in it.

Another reason is the FM capture effect: While that's a Good Thing for most
uses, it's a bug in the aviation arena, where both pilots and controllers
need to know that a transmission was blocked, fully or partially, by another
signal.

Does anyone have any information about the CQ WW RTTY Contest taking place this weekend 9/24-25? I'm looking for a brief synopsis of the rules, as I'd like to try to set aside some time for this. Exchange? Frequencies/bands? RTTY only, or AMTOR/PACTOR also? Scoring? Submission address?

If I'd have gotten into the HF digital modes earlier I probably would have been able to get a copy of the appropriate issue of CQ, but it's too late now. Can anyone FAX me the info if it's not convenient to post it here or reply by EMail?

Thanks a million!!

For the pundit in 3-land who made the crack about us not having enough criminals in New York state to produce ham license plates quickly enough, I present my new license plate and the observation that we must have a lot more hams than criminals in NY or is it criminals that are hams?

Using a World-Wide Web browser, see:

http://www.columbia.edu/~alan/ham/

(By the way, the dots and dashes say CQ DE:-)

To all:

Our local repeater club has been offered a Collins 830 FM Broadcast
transmitter to scavenge. We're looking forward to all those nice tubes,
etc. to raise some funds for our club. However there is a major hurdle.

How can we identify possible PCB-filled capacitors?

Attempts to talk to Contintental (who bought Collins broadcast business)
were not useful. We have been unable to find Sprague, whose capacitors
in the power supply and transmitter are the candidates.

Any suggestions or comments would be welcome.

Regards,
Greg

It sounds like you an argue that a ham antenna is exempted since
it is not intended for cable TV, network TV, or entertainment.

Basis and Purpose [of amateur radio] 97.1
a) ... voluntary noncommercial communication service particularly
with respect to providing emergency communication.
b) ... contribute to the advancement of the radio art.
c) ... advancing skills in both the communication and technical phases
of the art.
d) ... expansion of the existing reservoir ... of trained operators,
technicians and electronics experts.
e) ... enhance international good will.

None of the purposes of amateur radio include entertainment!
Has this tactic been tried in court?

4333. Wuoff hong

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-19 16:59:13 UTC
From: pmarsh@metro.mccneb.EDU
Message-ID: <9409191659.AA23814@metro.mccneb.edu.mccneb.edu>
Source record: 259973

Bruce N9WKE asked about Wouff Hong.

Rumor has it that Wouff Hong is a secret society of ARRL members. Unfortunately, since it (maybe) is a secret society, the members (if there are any) of the society (if it exists) couldn't talk about it except to other members (if there are any), so the conversation you heard couldn't possibly have taken place.

There are (rumored to be) initiations from time to time at various Ham conventions, but you'd have to show up at the announced time to see if the rumor was true. If the rumor was true, and you were successfully accepted, you couldn't tell anyone about it, if it took place. If it was true, and you WEREN'T accepted, you probably wouldn't be allowed to live long enough to tell what actually happened (or didn't).

Good luck, and if you see someone unloading a goat, a bunch of penguins, a brass key, a Tesla coil, and a wooden chair with leather straps around the legs near where a Wouff Hong initiation was rumored to be taking place, you might be cautious. Then again, you might not.

It's a terrible dilemma to talk about Wouff Hong (if such a thing exists). It's somewhat similar to the stories about dolphins saving people who fall overboard and push them to shore -- you only hear from those who get pushed to shore; you never hear from those who got pushed farther out to sea.

Paul Marsh N0ZAU Omaha pmarsh@metro.mccneb.edu
"Might, or might not, be a Wouff Hong member, if such an organization existed."

Source record: 259969

Here's a question on the same theme. There appears to be a phenomenon associated with nicads that lets you charge them at a fairly high rate successfully, if you watch the voltage and disconnect the charge (or reduce it) when the voltage starts down. I hooked up my slow charger to my BP-7 and watched the voltage. It never peaked, it just kept going up. Did I not leave it on long enough or does the phenomenon not work at a 0.1 C charge. I was afraid to leave it on more than 30 hours...

Is there a problem with the W5 QSL bureau?

I sent in envelopes over a year ago. About a month ago I sent in another big envelope and a card addressed to myself asking how many envelopes I have on file, and asking them to send any cards that are being held. I still have gotten no response. I put lots of postage on the envelopes and followed the instructions in the QSL bureau FAQ's.

If any other W5 stations are getting responses from the W5 bureau, please let me know what your secret is.

No, this won't work in any Court I have ever been in. The "not
limited to..." clause clearly does not restrict the "antenna"
provision. This is an easy case, you cannot erect any outside
antenna. Sounds like indoor antennas are your solution.....
OR you could go to the architectural committee - which is right
there in your contract.

Jon> on a Mac.

Yes, there are (there should be an FAQ floating around listing Ham
packages for the Mac, although chances are all he will need is to have
is a terminal program to connect to a local BBS.

Jon> And for me can you tell me the the proper Internet path to
Jon> send a email over the packet system to a packet user?

There are a couple different gateways, details of which escape me for
the moment. If you're a ham operator, it shouldn't be a problem,
otherwise every message will have to be read (since it's 3rd-party
traffic).

Hello Tony,

I can't speak for all the responses you read, but only for the study which was conducted by a Committee of ARRL Directors and staffers. You may wish to contact your Director for a copy of the report, or read the comments at the FCC reading room as they were submitted.

The ARRL study consisted of a number of surveys via US Mail, packet, and in-person interviews. In all, several hundred persons were heard from in that effort. The committee reported overwhelming support for the basic idea, although many suggestions for improving the introduction. The FCC NRPM would have had a simultaneous availability for all applicants. The ARRL proposal, based on the Committee study, recommended a series of stages so that all the FCC-610V forms didn't deluge Gettysburg at once.

Current law is what drives the $70 fee ($7.00 per year for a 10-year license) each time a person renews their license. ARRL has separately proposed a one-time up front fee (I believe the suggestion was $150.).

Source record: 259882

Michael,

Actually, I'm almost certain that such a restrictive covenant IS
legal. I'm NOT an attorney, but my understanding is that a state or
locality cannot pass a law forbidding antennae for ham operators,
as this is a federally-sanctioned activity. On the other hand, if
a condo association or similar organization establishes restrictive
covenants or rules for a community, this is perfectly permissible.
After all, you knew about the covenant before buying the house, so
you chose to have your rights restricted. Check with a lawyer, but
I'm pretty sure that't the answer you'll get.

In terms of what you can do:
1) After buying and moving in, submit your antenna/tower proposal to
the appropriate community board, along with an explanation of all the
wonderful things Ham Radio does for the world (public service,
emergency communication, etc.), and hope it gets approved. Ingratiating
yourself to a few board members would probably help.

2) If (1) fails, put up an "invisible" antenna. My dad, who lives in
a condominium with restrictive antenna rules, had an invisible wire
dipole on his roof for awhile, then recently installed a Butternut
vertical inside a tall bush in his front yard. There was an article
in QST about a year ago about a fellow who erected a flagpole in his
front yard, made of PVC pipe, and with a vertical inside it. They
won't stop you from flying Old Glory, will they? If you prefer, you
could put a birdhouse on top of the pole. Or try an attic antenna.

3) Buy a different house.

Hope this helps.

: study to prove the soundness of a time proven installation. I also said
: he and the city should not be cop to the "pettiness" of this situation.
: We will see how this turns out.

: This brings about a request. Can any of you recommend a reference where
: the calculations are concisely described for doing this kind of stuff.
: No doubt, they will require a calculation of wind load, stress
: calculations of the tower and loads of the guy hardware and anchors. Can
: anyone help? ....WA6WRX Don

The definitive source for that type of info is EIA Standard RS-222. I believe that that current revision is called RS-222-D, although there might be an "E" revision out by now. You would have to purchase a copy of this Standard direct from EIA in Washington, DC. EIA is an abbreviation for Electronics Industries Association.

Some simpler means of calculation are found in the Rohn and Microflect tower catalogs. Good luck!

Wayne_Estes@csg.mot.com (Wayne_Estes) asks:

>Is there a problem with the W5 QSL bureau?

>I sent in envelopes over a year ago. About a month ago I sent in another big
>envelope and a card addressed to myself asking how many envelopes I have on
>file, and asking them to send any cards that are being held. I still have
>gotten no response. I put lots of postage on the envelopes and followed the
>instructions in the QSL bureau FAQ's.

>If any other W5 stations are getting responses from the W5 bureau, please let
>me know what your secret is.

>73 de Wayne Estes WD5FFH wayne@csg.mot.com

Did you send to the Midland TX address or to the very old Okla City one?
If the latter, there will be some delay in getting your envelopes to the
right place.

I am getting superb service from the W5 bureau. I happen to know the
"5B" sorter, but don't know who sorts the "5F" cards - it's possible
that your problem is there.

Even if the stack of envs you sent in a month ago went to the right
place, they still have to find their way to the 5F sorter, who then
has to stuff your envs and send them out, and a month is not that much
time, given that this is all volunteer effort. I'd be inclined to
give them another month, and then if you have received no cards, drop
a note to WF5E in Midland and ask if there is some problem.

The lack of response a year ago may very well be tied to the move of
the buro HQ from OK to TX -

4351. VHF Installation in Isuzu Trooper

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-19 22:19:57 UTC
From: jsanfilippo@delphi.com
Message-ID: <5S8QH9t.jsanfilippo@delphi.com>
Source record: 259881

Does anyone have experience with 2m/70cm mobile installation in '92 or
later Isuzu Troopers? The vehicle computer module is located just be
neath the am/fm broadcast rcvr, and I'm wondering how susceptible it is
to emi from the ham gear....Thanks.

Source record: 259910

MRD>My wife and I are looking at a new house... Its a nice house... Nice
MRD>neighborhood, nice neighbors... You know, the kind of house that's
MRD>just... well..... Nice. EXCEPT!

MRD>There's this one little clause in the deed restrictions:

MRD>GENERAL RESTRICTIONS:

MRD>Antennae: No exterior radio or television antenna or aerial or satellite
MRD>dish receiver, or other devices designed to receive telecommunication
MRD>signals, but not limited to radio, television, or microwave signals which
MRD>are intended for cable television, network television reception, or
MRD>entertainment purposes shall be erected or maintained, except by
MRD>Declarant, without the prior written approval of the architectural review
MRD>committee.

MRD>Pardon me, but I thought this wasn't legal? Can someone post, email or
MRD>point me to relevant legal precedent which makes the clause invalid?

I was always under the assumption that anything was legal as long as
someone was stupid enough to sign it without having it checked out by a
lawyer.... Just my $.02 worth.

4357. Aviation VHF

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-19 23:57:59 UTC
From: cswanson@kaiwan.COM
Message-ID: <199409192358.QAA04300@kaiwan.kaiwan.com>
Source record: 259890

In addition to the FM capture effect, usually considered verboten on the aviation services, wouldn't the Doppler effect come into play at times, especially with the high speeds of military jets nowadays? I do not know how much a typical signal frequency modulated would move in frequency at, say, 650 miles an hour, but it is something to think about...

I think the real reason is historical. HF aircraft radio was
AM, so when VHF operation started in WWII, AM was the natural
choice over the still experimental FM. By the time the land
mobile services adopted FM, aircraft VHF was well-deployed and
the standard was set.

Clark Savage Turner (turner@safety.ics.uci.edu) wrote:

: No, this won't work in any Court I have ever been in. The "not
: limited to..." clause clearly does not restrict the "antenna"
: provision. This is an easy case, you cannot erect any outside
: antenna. Sounds like indoor antennas are your solution.....
: OR you could go to the architectural committee - which is right
: there in your contract.

Uh huh. That's exactly right. A few amendments:

1. Go to that committee BEFORE you buy.

2. Get any agreement in writing, and have your own attorney approve
the language.

3. Make very sure your offer to buy includes an "out clause" if you or
your attorney don't like the language of the deal, or you can't get
one at all.

4. Don't think you can get away without having your attorney look at
this (not to mention everything else you have to sign - *everything*
you sign!) A few hundred bucks is cheap insurance for the many years
of your life you will be working to pay for that house. P.S. that
nice lawyer from the bank? Not your attorney. (S)he's *their*
attorney. Big difference. You want a player on YOUR team.

Good luck.

Understand, I don't condone the parking of a repeater on a simplex
frequency, in violation of the band plan. That's just a sign that (1)
coordination in Los Angeles has gone to hell, and (2) nobody gives a damn
about what other people want to do in the band.

However, two wrongs don't make a right. Now that you *know* that there
is a repeater on that frequency, and the rules state that you are not
to cause deliberate interference, continuing to transmit *knowing* that
you are sitting on the input freq could be construed as deliberate
interference.

4367. I am a Ham! (Re: wait time)

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-20 04:52:19 UTC
From: dbarton@unix.cc.emory.edu
Message-ID: <35lpq3$geq@emoryu1.cc.emory.edu>
Source record: 259903

Greetings! After a seemingly neverending wait, I am now a licensed Ham operator! I passed my test on 23 July, and received my license this weekend, almost exactly 8 weeks.

I am a lowly Technician, but I am working on the code, and now that I have a little motivation, it should go faster.

I do have few questions: Any suggestions on a good first radio? Probably 2 meters because that seems to be the most active here in Southern California. (I've been listening in with my scanner for a while, in anticipation.)

Any suggestions on study materials for General and above?
I need at least a General license to do what I want to do, but what would like to move on in the hobby. I am interested in material that helps me learn the concepts, not just the answers. Any computerized material available on the net would be great. This leads me to my next question...

I realize that this may sound vain, but I understand that even if I pass my General class test, I will still have the same call sign because all of the Group C call signs have been given out in District 6. Just wondering...

Finally, I have been considering the purchase of a new scanner, and the ICOM AR-8000 in the new Grove catalog caught my eye. It seems to have a lot of features, so many that it seems too good to be true. I had my heart set on the Pro-2006, but I could use many of the features on the AR-8000, if it really is as good as it says (most notably, the ability to receive in th marine SSB/HF band).

Thank you to all of the hams in the SD area, and those on the net who have helped me get to where I am. (Special thanks to the author of Super Morse.) Thank you in advance to those who respond th these questions. Any responses can be directed to bartdoug@teetot.acusd.edu

And now my very first...

73,

Douglas E. Barton
KE6LZM

The 3-Hr Ap Indices for 18 SEP 94 are: 6 6 6 5 5 4 4 5
Greater than 2 MeV Electron Fluence for 19 SEP is: 1.8E+08

SYNOPSIS OF ACTIVITY

Solar activity remained at a very low level. Only minor
evolution occurred in disk regions. Faint x-ray emission was
visible near SE22 where old Region 7772 is due to return.

Solar activity forecast: solar activity should continue
at a very low level. Old Region 7772 is not expected to be
active this rotation.

STD: A full-disk Yohkoh x-ray image showing the weak emissions
near SE22 has been appended to this report.

The geomagnetic field was predominantly quiet. Unsettled
conditions were detected between 19/0000-0300Z. Energetic
electron fluxes were at moderate to high levels.

Geophysical activity forecast: the geomagnetic field
should be quiet to slightly unsettled for the next three
days.

Event probabilities 20 sep-22 sep

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 20 sep-22 sep

A. Middle Latitudes
Active 15/20/15
Minor Storm 01/05/01
Major-Severe Storm 01/01/01

B. High Latitudes
Active 20/25/20
Minor Storm 05/10/05
Major-Severe Storm 01/05/01

HF propagation conditions were normal over all regions.
Normal propagation is expected to continue through at least
22 September inclusive.

------ ---- ---- ---- ---- -- ------ ------ ---

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

OH2EW/OH0 ALAND ISLANDS CONTESTPEDITION

Sanoma Radio Club makes it yearly pedition to work the Scandinavian Activity Contest SSB portion at 24-25th September. The location will be in southwestern part of the Aland main island, Eckero county.

This year the gang consists of OH2's: Jukka -BUA, Eljas -ZA, Jorma -BEJ, Jyrki -BAP and Kari -BMY. We are multi-op / single-tx.

Catering is by S. Ausages and L. Otofbeer

We will work 80-40-20-15-10 SSB only. May be Kari is going to work some CW too.

The station is equipped with beam on high bands and full-size verticals on lowers. The amp is also with, so we hope to be loud.

QSL to OH2EW CBA.

Dave,
I had been wondering the same thing. So, today while I was at HRO I
asked if there was such a number. They said "yes" and gave me this number
for the FCC
(717) 337-1212. The guys at HRO said to call and ask if your amature radio
license has been processed yet. They also said if you ask real nice they
might even tell you what your callsign is. I tried to call when I got home
but, the FCC had already closed. I think the voice mail said there hours
are from 9am to 5pm EST. Hope this helps you.

73's

Yes, it's discretionary. You can do what you like, of course, but
there's no FCC rule prohibiting this. In fact, you can give the
elements in any order you like. Now, in most cases, your rule makes
sense - the unprepared should study more, since they're not going to
upgrade any more anyway. However, in a special case I would rather
accomodate a special need. It's up to the VE team (not just the
contact VE), but remember: if you don't, this person is forced to
either pass all elements at once (or, more exactly, within a couple of
months, before the license arrives) or actually lose privileges. A
large disincentive to apply, isn't it?

Sorry, it is legal. Private contractual agreements aren't overturned
by PRB-1, or any other radio related statute. Your only recourse is
to not agree to such restrictions at the time of purchase. Be sure
to tell the seller *why* you won't buy their nice house as well. The
only way to beat these restrictions is to make builders who insist
upon them lose enough business so they'll quit including them in
their deeds.

>at a 0.1 C charge. I was afraid to leave it on more than 30 hours...

You missed it. The dip is slight, a few millivolts, and you have to
measure it under load, not while charging voltage is present. The
dip is also short, continued charging will cause the surface charge
voltage to go higher after the dip occurs. Chargers using this method
of detecting charge status are generally pulse chargers that momentarily
apply a load and sample the cell voltage after each charging pulse.

From: milway@tecnet1.jcte.jcs.mil
Message-ID: <199409201331.GAA24542@ucsd.edu>
Source record: 259918

This may be a stupid question, but I am new to the game. I have a Kenwood TM-733A which I plan to use in my car with a dual band antenna. The radio has a separate output for each band, and the manual does not address the use of a dual band antenna. Do I have to spring for a duplexer? If so it may be more cost effective to just buy an additional 440Mhz antenna, and use it along with the dual bander operating on 2 meters only.

Any advice from the net?

>endeavor and require their placement only in a commercial zone IMHO).

I agree with you 110% - you can get catch more bees with honey
than vinegar. If you are a ham and are caught up in a disagreement
with your town it certainly is better to negotiate rather than
litigate. However, many times the town fathers are short sighted
and behave in a manner that defies logic and common sense. Their
behavior, as you point out, is driven by a need to minimize any
potential embarassment to their political reputations and to
minimize damage to their their (often inflated) egos.
IMHO, every town is different and the way you approach the "powers
that be" is as much a judgement call that is based on the collective
personality of the governing body and their perception of what
you, the ham, represent. Unfortunately, logic and common sense
are often left at the bottom of the steps to town hall.

Let me give you a planning point of view. This is all well and
good if the broadcast station is in a commercial zone. In recent
history, commercial radio antennae, whether they be broadcast
antenna or, cell sites, have been placed in residential zones.
They generally have had to go thru the local zoning board
of adjustment for a use variance to allow them to coexist
with the residents. All constraints on the use are spelled out
in the agreement between the town and the commercial enterprise.
Before the variance is granted the public is afforded the right
to be heard. It is at this stage that the public can get involved
thru the formal hearing and review process they are accorded them
by state (NJ municipal land use) law. I doubt that in the future new
commercial sites can be planned. Radio sites usually are selected
by the commercial enterprise on the basis of HAAT (height above
average terrain). Seldom does this coincide with the town's
designation of their commercial or (light) industrial zones
as spelled out in their master plan. To create a commercial
or industrial zone in the middle of a residential neighborhood
is discouraged. Spot zoning is almost always frowned upon.
So, the normal process for new applicants is to go thru the
zoning board for remediation of their hardship. They are forced
to prove that a hardship exists and if their intended use
conforms with the "vision" the zoning board has for the town,
the variance is granted.

|> thats what my friend taught me, he's a radio operator in the Singapore Navy

I wish to thank Teh Aik Wen for reminding me of this, i.e. converting text
that you see to morse. I had forgotten all about it and I still do this and
wasn't aware of it until I saw this posting.

1. When you first learn the alphabet, do billboards and road signs
like STOP, YIELD, LEFT, RIGHT, DO NOT ENTER, CAUTION, FALLING
ROCKS, PIG CROSSING, PEDESTRIAN CROSSING, RAILROAD XING, ...

2. When you get the numbers down, do license plates. You get
random groups of letters and numbers, thus don't get stuck
in a rut with the same thing over and over (unless you count
random combos of 36 symbols of letters and numbers a rut). :-)

If you think that you ever want to do mobile CW operation, put an
oscillator (keyer with sidetone) and key/paddle in the car. NOW
KIDS, if you do this, read all the articles ever written on mobile
CW operation and practice safe driving first. If you can't do
two things at once (like me and walking and chewing gum), then
don't even think of doing this. :-) I can just see you explaining
to the local police, lawyers, judges, insurance companies, and the
jury what you were doing when the accident occurred. I was sending
OH SHoot when it occurred. :-)

Of course, if you commute with a group or in a train/bus, this will
distract others and probably bug the heck outta them too.

dit dit

My wife and I (correction, me) had the same problem when looking for our new home. We found several homes which were just perfect in everyway, HOWEVER they had this antenna deed restriction attached. After 8 months of looking and looking we finally found a older home in a upscale part of the city that DOES NOT have any antenna deed restrictions. I guess the moral to my story is, it all depends on whats more important to you. Sometimes you can't have everything, you have to bend, give and take. In my case, being the hard-core ham that I am, no antenna deed restrictions were more important then a swimming pool. I'm also very lucky to have a wife that understands me (and ham radio).

Looking back on it now, and given the circumstances, I suspect that they
could have dropped a plane load of those hats with the revolving red lights
on top and had the same outcome.
I used to like Radio Shack products, then they went down hill. Lately,
I've seen a rise in the products aimed at the Ham market...hopefully this
will be the beginning of a new trend.

Gee, does that mean that if he _does_ have it checked out by a lawyer it _isn't_ legal?? ;-) (Actually, I'm quite sure there are things I could sign that wouldn't be legal either, whether I had them checked out by a lawyer or not...for example, you can bet that a covenant that barred people of a certain race or religion from living in a development of privately owned lots would be very difficult to enforce in the US these days.)

I'm not sure why anyone to want to do this anyway, but I suppose you
could take all the theory exams in the right order, and then take the
20 wpm CW test when you were otherwise ready for the Extra class license.
Or would they insist on giving you a no-code Tech license along the way?

A local Brit who got tired of his long reciprocal call just went along
and did everything for the Extra class license in one morning. This
should not be beyond the capability of the average True Brit.

Bulletin 341 OPS: HELICOPTER USE
Release Date: August 29, l994

(Extracted from "Landing Site Tips for Lifeflight" in TAC-ONE,
official publication of the San Diego County RACES.)

Conditions and circumstances for Lifeflight to be called is determined by
the Public Safety organizations of the county. For landing site selection a
helicopter requires a minimum area 60 by 60 feet, free of wires and
obstructions directly overhead and not more than an eight degree slope.
Avoid dusty areas. Hosing down an area helps. Site should be marked; usual
markings are an emergency vehicle with flashing lights, smoke bomb, flares
or car headlights criss-crossing each other at right angles.

For communications with the helicopter enroute, only one person
should be the ground contact. It is best for this person to be free of
patient care and at the landing site, monitoring the specified frequency
open tone. On initial contact, the pilot will give the ETA. The ground
contact must let the pilot know when sight has been made of the helicopter
using clock positions. It is usually best for someone to notify traffic
officers that traffic will need to be stopped just prior to landing. The
contact person must describe the landing site to the pilot using major
landmarks, such as type of site (street, intersection, parking lot, field,
etc.) direction from scene, any obstructions, wind conditions and
identifying features (smoke, flares, lights, etc.). Just before the
helicopter begins its approach, ensure that the landing site is clear of
non-essential personnel, vehicles and loose objects.

When the helicopter is on its approach, stand in the center of the
landing site waving a flashlight or flare until the pilot verifies that you
are seen, then notify the pilot when the area is clear. Warn ground
personnel to protect their eyes and patients from debris caused by rotor

wash. Do NOT allow use of artificial lights while a helicopter is landing, as they will blind the pilot. Always maintain radio contact with the pilot and advise of problems or changes. Keep in mind that the rotor blades will continue to turn 1 to 3 minutes after landing. While medical crews may exit while the rotor is slowing down, don't approach or allow anyone else to approach while the blades are turning without the pilot's permission, then only from the front of the chopper. Maintain control of landing site until blades have completely stopped turning.

Just before the helicopter departs, clear the landing area of ALL personnel. Once it is clear, inform the pilot. Keep the area clear until the helicopter is gone. Remember things don't always go as planned. Keep in constant radio contact with the pilot!
EOM.

BULLETIN 342 MISC: NIFC Boise
Release Date: September 5, l994

The National Interagency Fire Center (NIFC, formerly
Boise Interagency Fire Center) located in Boise, Idaho is a joint
venture of the several agencies: USFS (U.S. Forest Service), BLM
(Bureau of Land Management), BIA (Bureau of Indian Affairs),
USFWS (U.S. Fish and Wildlife Service), NPS (National Park
Service) and NWS (National Weather Service).

In addition to fires it has also been active in floods,
earthquakes and other disasters such as Hurricane Andrew, Mount
St. Helens volcanic eruption and the Northridge Quake. For the
latter the State Office of Emergency Services ordered virtually
everything from the Boise radio warehouse - hundreds of
portables, repeaters, control stations, fixed links, battery
packs and antennas.

The NIFC Telecommunications Branch has a large staff of
administrators and technicians for communications assistance. It
stocks equipment in caches, which consist VHF and UHF repeater
and radio kits, some satellite equipment, radio telephone
interconnect kits and electronic key telephone systems.

When the State has exhausted its cache of kits and
transportable resources it may place a request for Federal
assistance. Because of the size of California, two NIFC-type
warehouses [in CA] duplicate some of the equipment stored further
away in Boise. Requests are placed with the nearest Federal zone
for delivery to the requesting agency. If Zone cannot fulfill the
request it is forwarded to NIFC in Boise. The only costs
associated with the use of the Federal equipment is shipping, any

lost equipment, batteries, and the daily cost of a technician if required. To make the latter unnecessary, several people in California have been certified through NIFC training.

The center teaches a highly regarded two-week training course in Boise on the Incident Command System, Communications Unit Organization and staffing, theory and equipment, accountability, incident planning and demobilization. It includes both tabletop incident practice and hands-on field work with actual equipment. Completing the training enables one to be a fully qualified Communications Unit Leader.

Suggested by an article in the "APCO BULLETIN" by Brent Finster, Communications Director for Aspen-Pitkin County Communications Center, Aspen, Colorado.
EOM.

BULLETIN 343 MGT:ACS/RACES Plans 1/3
Release Date: September 12, l994

Emergency communications plans, such as those for the ACS/RACES, benefit the adopting jurisdiction as well as adjacent jurisdictions. The adopting jurisdiction specifies the parameters of the service, such as how it is to be used and activated. For adjacent ones it alerts them to the potential communications mutual aid resource that has met with the sponsoring jurisdictions stamp of approval.

In most states such plans involve three levels: state, county (or parish), and municipal (or city). Each is prepared in a spirit of cooperation. They are similar, yet each has its own uniqueness.

Who signs and approves a ACS - RACES plan? The typical process is as follows:

For a city plan the city OES Coordinator or Civil Defense Director, the city Radio Officer and the county Radio Officer are the ones who normally sign approval.

For a county plan it is the county OES Coordinator, the county RACES or ACS Radio Officer, and in California, the State OES Region Radio officer, the OES Region Communications Coordinator and the State ACS/RACES Radio Officer and Coordinator.

A state plan is signed by the state Chief Radio Officer, state ACS/RACES coordinator, the state communications and warning officer and state CD director or deputy.

In some jurisdictions a supplemental process may occur, in that either a signature of an elected official is required such as the

chairman of the board of supervisors, or the official body may approve the action by a resolution, in which case a copy should be attached to the plan. (continues in next bulletin)

Note: Two copies of the l994 California State Plan were forwarded to each California county OES in May. California jurisdictions may request additional free copies on agency letterhead. For others, a printed copy of the California State Plan is available for $11 (check payable to State of California) and sent to 'State Plan' Telecommunications Branch, Governors Office of Emergency Services, 2800 Meadowview Rd, Sacramento, CA 95832.

RACES Bulletins are archived on the Internet at ftp.ucsd.edu in hamradio/races or in hamradio/packet/tcpip/incoming and can be retrieved using FTP. The opinions stated are those of the author of the bulletin and not the poster.

BULLETIN 344 MGT: ACS/RACES Plans 2/3
Release Date: September 19, l994

For obvious reasons, a city and its county cannot develop
communications plans independent of one another, any more than
can a state and its counties. Such plans are the basis of
emergency communications mutual aid and are jointly developed in
a spirit of cooperation. For that reason they bear signatures of
approval or concurrence by officials of both jurisdictions. The
purpose is for each jurisdiction's plan to provide cooperation
with the other -- not for one to dominate the other.

Nowhere does this discussion, or any ACS - RACES plan,
intend to infer that a state can direct a county or that a county
can direct a city in the application of an ACS or RACES program.
Plans need be compiled and issued in a spirit of mutual benefit
and cooperation , working together to provide emergency
communications when needed. An aspect of this is a standardized
plan format which makes cooperation easier. A further aspect is
that concurring signatures notifies other governments that an
OFFICIAL action was taken to approve the plan.

Emergency communications plans that fail to reflect the
necessary inter-relationships described above are almost
certainly doomed to failure. Unfortunately, history dictates that
there have been some otherwise responsible government officials
who believed that all of their communication was as close as
their telephone, hence they failed to develop an emergency
communications reserve and then suffered the debilitating results
personally.
(Continues next bulletin)

Note: A sample model plan is available on request with a SASE
9x11 mailer with 75 cents postage to non-government or out of
state requests. For California jurisdicitions the Auxiliary
Communications Service personnel in Sacramento offer to provide a
custom plan for any city or county emergency communications
reserve coordinator.
EOM.

RACES Bulletins are archived on the Internet at ftp.ucsd.edu in
hamradio/races or in hamradio/packet/tcpip/incoming and can be
retrieved using FTP. The opinions stated are those of the author of
the bulletin and not the poster.

I recommend the study guides by Gordon West. Radio Shack carries them. The No-Code Technician book seems to be working well on me - I passed a practice test generated by a computer after one reading. His Morse code tapes also seem to work well for me. YMMV.

I am looking for information and/or schematic for a simple RS232/CAT
interface for the Yaesu FT757GXII.

If you have any info that you are willing to share please contact me via
E-mail, Thanks!

HB>The ARRL study consisted of a number of surveys via US Mail, packet,
HB>and in-person interviews. In all, several hundred persons were heard
HB>from in that effort. The committee reported overwhelming support for
HB>the basic idea, although many suggestions for improving the introduction.
HB>The FCC NRPM would have had a simultaneous availability for all
HB>applicants. The ARRL proposal, based on the Committee study, recommended
HB>a series of stages so that all the FCC-610V forms didn't deluge
HB>Gettysburg at once.

HB>Current law is what drives the $70 fee ($7.00 per year for a 10-year
HB>license) each time a person renews their license. ARRL has separately
HB>proposed a one-time up front fee (I believe the suggestion was $150.).

The charge on lifetime commercial licenses is only based on a 15 year
period which makes them $105. As no further testing is required for
licenses couldn't the amateur licenses be considered to be lifetime?

: to get creative. Any ideas would be appreciated.

I purchased an Acura Integra a few months ago, and am going through the same analysis. I don't know how close the Acura and Accord are, but here are some thoughts...

I plan on mounting the rig (Kenwood 733 is current favorite, not purchased yet) in the dash where the CD player would have gone. It's right under the radio. Wires for power might fit through the firewall where the drip line for the Air Conditioner go through. The tube is fairly soft. I haven't found any other obvious place, short of drilling a hole, and I'm not even sure where I'd do that - there seem to be several layers to the wall. The built-in speaker probably won't do, so mount an external speaker under the dash on the driver's side. Lots of space under there, but no obvious mounting places. I expect I'll have to make my own brackets.

The biggest problem I have is what to do about an antenna. The car has a sunroof and is a hatchback. There isn't a lip anywhere that is the right shape to handle a lip-mount. A mag-mount might work at the bottom of the rear window but there isn't enough gap between the hatch and the car for the wire to snake through. I'm not yet brave enough to Drill The Hole, either. Glass mounting an antenna on a side window was suggested, and shot down as beaming RF right into the car (and me!), not to mention the problems with feed line radiation that those things tend to have. Any suggestions on this topic would be appreciated.

Good luck, and enjoy your new toy!

4419. Radio Equip Donations Wanted for Haiti Feeding Program

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-20 21:29:48 UTC
From: tjblack@cais.cais.com
Message-ID: <35nk8c$5ll@news.cais.com>
Source record: 259866

Mission Reach Out, located in the bush country of Haiti between Leogane and Ci-Ara, feeds approximately 4000 people per day on-site and via a food distribution program to (currently) 19 villages. Expansion of the village feeding program is underway.

Neither electric power nor telephone lines have ever served this area. There are two types of communications available to Mission Reach Out: Runners and amateur radio. They use both.

On-site electric power for amateur radio is supplied via 4 deep-discharge, lead-acid batteries. Battery charging is supplied via a 25-year old, donated, two cylinder diesel generator which provides 110 volts at 60 Hertz. Solar cells are too expensive for Mission Reach Out to afford despite the glorious sunshine that is available daily. Charcoal is the on-site cooking fuel since the embargo and the only available fuel ever for the village-feeding program.

Mission Reach Out depends on its donated Kenwood TS-140 and 3-element beam to communicate with the 70-member church in the United States which founded the mission in 1981. It also depends on the TS-140 to communicate with other missions around Haiti on an 80 meter net. If the TS-150 goes out, they only have runners.

MISSION REACH OUT NEEDS: 1) AN ALL-BAND, HF TRANSCEIVER TO BACK UP THE TS-140. 2) TWO METER BASE STATION AND TWO METER PORTABLES TO ASSIST WITH THE VILLAGE FOOD DISTRIBUTION PROGRAM. 3) SOLAR PANELS WOULD BE TOO MUCH TO EXPECT, BUT THEY CERTAINLY WOULD BE WELCOMED.

Equipment donations will be tax deductible. Please contact me if you have any equipment you would like to donate. Don't limit your offers just to what's listed above. Your imagination would be helpful.

For more information and instructions on the handling of donations please send e-mail to: tjblack@cais.com

Once upon a time, there was a picture of the (possibly existant) Wouff Hong talisman. This was in QST, in the Fifties or early Sixties. Does anyone have this picture? Does anyone remember what I am talking about? Does anyone know what is going on?

I know it's a minor point, but technically does this mean you can put
up an antenna designed for transmitting? It should work pretty good for
receive too... :)

>signals, but not limited to radio, television, or microwave signals which
>are intended for cable television, network television reception, or
>entertainment purposes shall be erected or maintained, except by
>Declarant, without the prior written approval of the architectural review
>committee.

I think your stuck if you buy it. Can you live with an antenna in your
attic? Or long wire strung along the top of the fence?

Seems like these kinds of restrictions are mainly to make sure property
appearance isn't cluttered with ugly antennas (beauty is in the eye of
the beholder). I wonder if anyone has ever tried decorating an antenna
and then try to get it approved.

But, if you just have to have that tower and beam, sounds like you'd
better look elsewhere... :(

>I wish to thank Teh Aik Wen for reminding me of this, i.e. converting text
>that you see to morse. I had forgotten all about it and I still do this and
>wasn't aware of it until I saw this posting.

Actually, this doesn't work for me. I have the problem where I can easily
translate text to dits and dahs at high speed; I just can't seem to get the
reverse operation down quite right. I still find myself trying to count
dits and dahs rather than hearing the "sound" of letters and words. Any
hints?

Just like you're entering another call area (NO, CANADA IS NOT THE
LARGEST STATE IN THE US!!!). So while I'd normally be NF3I, if I
were in California I'd be

NF3I/6 or NF3I portable 6

In Ontario, where we vacation every summer, I transform into

NF3I/VE3 or NF3I portable VE3

and you use your FCC-granted privileges.

Got no responses the first time, so I thought I'd give it one more try.

Recently picked up a Free radio (HT) and desk top charger.

It is a TAD model AL-165

Desperatly seeking an info on this unit. (Especially a manual!! or reproduction

This unit looks like a old Yaesu unit on the outside. This unit appears to

be at least 8 years old.

Thanks,
Andy Cropley

I'm new to amateur radio (actually, I haven't got a license yet - I just got the results to my theory exam last sat) - and I was wondering about these QSL cards...

Do they _have_ to be cards? Can't we fill out an aerogram (?) instead, and post it?

You know, like people who have laserprinters, can print pretty good b/w pictures onto a sheet of paper and the like... The cost (airmail) would be considerably lower than a card too (I think)

Maybe I'm just lazy...

PS: Whilst I'm talking about amateur radio, where I come from, they've recently introduced a restricted (ie no-code) license - where you're limited to the VHF bands - how far can one reach with VHF anyway?

SYNOPSIS OF ACTIVITY

Solar activity continued at a very low level. The sun was
void of spots during the period. Only minor plages and small
filaments were visible.

Solar activity forecast: solar activity should continue
very low for the next three days.

The geomagnetic field was predominantly quiet during the
period. Energetic electron fluxes ranged from low to high
levels.

Geophysical activity forecast: the geomagnetic field
should be quiet to slightly unsettled for the next three
days.

Event probabilities 21 sep-23 sep

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Ken,

It's probably _never_ too early to prepare for Dayton '95. <grin>
Although I've heard rumors that motels in the Dayton area won't accept
reservations for Dayton '95 lodging until after January 1, you can
always try. This year, the tentative dates are April 28, 29, and 30th. If
you're interested in selling in the flea market area, you should get your
application for a space(s) in before Feb. 1.
I've attended each year since '86 and I'm still amazed at the sheer
size of the 'fest.

For more "official" info, you might want to try writing to:

Dayton Hamvention
P.O. Box 964
Dayton, OH 45491-0964

Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,rec.radio.amateur.equipment

Can anyone help me locate a source for the crystal controlled 2M rigs below?

1. ICOM IC-22A
2. ICOM IC-215
3. KENWOOD TR-2200A, TR-2200G
4. KENWOOD TR-7200, TR-7200G
5. YAESU FT-2F
6. YAESU FT-221

It does not matter if these are new, second or third-hand. Just as long as they are in working condition. Please e-mail me ASAP. Thanks.

73,
Daniel

: >
: Just like you're entering another call area (NO, CANADA IS NOT THE
: LARGEST STATE IN THE US!!!). So while I'd normally be NF3I, if I
: were in California I'd be

: NF3I/6 or NF3I portable 6

: In Ontario, where we vacation every summer, I transform into

: NF3I/VE3 or NF3I portable VE3

: and you use your FCC-granted privileges.

: Scott NF3I

Even better than that - Generals and above are not limited to their
FCC privileges, but can use full "Advanced + 12 wpm" Canadian
privileges! Here are the gory details:

FAQ: US Automatic Reciprocal Operation in Canada

Q1: I have an FCC-issued amateur license. What do I have to do to
operate an amateur radio station in Canada?

A: A reciprocity treaty, TIAS 2508, provides for US-Canada reciprocal
operation of amateur radio stations. No application, registration, or
fee is required. You are automatically eligible to operate in Canada
if all three of these conditions apply:

1. You have a valid FCC-issued license;
2. You are a US Citizen;
3. You are a resident of the US (if you're not a US resident,
please direct your questions to a Canadian official. As I
understand it, if you become a Canadian resident, your US
license is good for a while, but they expect you to get
a Canadian one eventually).

(GR2.45.1.a, RIC-25 p. 9)

Q2: What privileges do Canadian operators have?

A: Legally, Canada has no separate phone band or other mode
restrictions. Instead, they adhere, on a voluntary basis, to a

bandplan, similar to the way we use 160 meters. (The IARU Region 2 bandplan can be found in Chapter 2 of the ARRL Operating Manual.) Canadian amateur bands are the same as those in the US up through 1.2 GHz, except they have all of 220-225 MHz, and they only have 430-450 MHz. There are, however, bandwidth limits (-26 db):

160, 80, 40, 20, 17, 15, 12 meters: 6 kHz maximum bandwidth
30 meters: 1 kHz
10 meters: 20 kHz
6, 2 meters: 30 kHz
220: 100 kHz
440, 902: 12 MHz
1.2 GHz and up: none specified

(Schedule II, RIC-25 p. 15)

Q3: What privileges am I allowed while operating in Canada?

A: All foreign amateurs, including those from the US, are assigned reciprocal privileges according to the Morse Code speed needed to qualify for their license:

12+ wpm: All "Advanced + 12" privileges
(i.e., *all* Canadian privileges)

[US General, Advanced, Extra Class]

5-11 wpm: All privileges above 30 MHz,
PLUS CW and CW only on all bands below 30 MHz;
limited to Basic privileges [*]

[*] *Canadian* Basic + 5 wpm licensees are allowed full access above 30 MHz, plus (full) access to 80 and 160, only. However, the above *is* what the rules say about *foreign* amateurs operating in Canada.

[US Novice Class, Technician + 5 WPM code]

0-4 wpm: All privileges above 30 MHz, with Advanced privileges

[US Technician without code]

(GR2.45.2,3,4, RIC-25 p. 9)

Q4: What's the difference between Basic and Advanced?

A: Without Advanced Qualification (or equivalent), you may not:

1. posess or install a transmitter or amplifier that isn't commercially designed and manufatured;
2. posess or install any radio apparatus manufactured specifically for use as a repeater where input and output are on the same band;
3. install a repeater where input and output are on the same band;
4. set up a club station

(GR2.47, RIC-25 p. 10)

Basic operators are also limited to lower power.

Q5: What are the power limits?

A: An Advanced operator or equivalent can use up to 1000 W dc input, if power is measured as input to the final stage, *or* an output of 2250 W PEP SSB/750 W carrier power for other modes, if output power is measured.

A Basic operator or equivalent is limited to 250 W input, *or* 560 W PEP SSB/ 190 W carrier power other modes, output.

It is illegal in Canada to posess or install a transmitter or amplifier capable of exceeding your legal maximum power by 3 db.

(GR2.58, RIC- 25 p. 11-12)

Q6: So a General class licensee can transmit phone on 3760 or even 14140 kHz? And a Novice can use a 2 meter repeater?

A: Absolutely.

Q7: But I heard that the FCC won't allow you to exceed your US operating privileges, even in another country.

A: I personally called the FCC and was able to confirm that this is NOT the case. The FCC does not enforce Part 97 in foreign countries. Despite what you may have read, it is perfectly legal to use whatever privileges Canada allows you (see above) while you are operating a station in Canada.

Q8: How do I identify in Canada?

A: If you're operating under your US license, then you use your call "mobile" (if you are) or "portable" (if you're not), *followed by* the appropriate indicator:

Nfld: VO1
Lab: VO2
PEI: VY2
NS: VE1
NB: VE9 (since Dec 1993; prior to this it was part of VE1)
Que: VE2
Ont: VE3 or VA3
Mtba: VE4
Sask: VE5
Alta: VE6
BC: VE7
NWT: VE8
Yukon:VY1

On CW, RTTY, and such you just use a slash, for example, I would use "KG2S/VE2" in Quebec.

The treaty requires you give your location by City and Province/Territory at least once per contact, but the Canadian rules make no mention of this.

While the treaty requires English ID, the Canadian rules allow you to use French, too. A chacun son gout. (However, you are not limited to English or French during your contacts; you can use any language.)

Of course, if you operate a Canadian station or get a Canadian license yourself, you use that callsign.

(GR2.57.1-3, RIC-25 p. 12)

Q9: What if I'm not from the US?

A: You will have to contact Communications Canada (numbers below) and apply for permission to operate. If your country has a reciprocal agreement with Canada, your privileges (once licensed) will be those outlined in Question 3.

If you, as a US licensee, want a Canadian license, you may be able to get it merely by passing a 26-question rules exam and giving a Canadian address. I know of at least one Advanced-class licensee who has done this with a Delegated Examiner. A Canadian station license carries an annual fee (currently about CDN$24), and license terms end 31 March of each year.

Q10: I'd like to get a copy of the Canadian rules. What do I do? Where do I address questions if I'm in a "gray area"?

A: I highly recommend getting a copy of the rules. They publish a number of circulars called RICs that you can order. They sent me these without charge. You can get them in French, too, of course ("CIR-25", etc.).

RIC-25: Rules and Regulations affecting the Amateur Service. 24 pp.

RIC-3: Banned Countries/Reciprocal List/Third Party Traffic List

RIC-66: Addresses and Telephone Numbers of Regional and District Offices

If you want information on exams in Canada, ask for:

RIC-24: Information on the Amateur Operator's Certificate Examinations

RIC-1: Information on the Delegated Examiner system

There are a lot of District offices, so I'm only going to list one in each Province. You can ask them to mail the rules to you, or you could get the address for the office closest to where you'll be visiting and go pick up what you want there.

>
>Any advice from the net?

Yep. Either spring for a duplexer, or run two antennas. It's likely to
be better to use the duplexer and a single centrally mounted antenna
than to try to use two antennas mounted in non-optimal positions.

Be careful with in dash mounting that there is sufficient air circulation
around the radio (you may have to add a fan and a bit of fabricated ducting
as a friend of mine did). That little Kenwood gets real hot during transmit,
and the heat has to be carried away or it goes off frequency (and eventually
burns up).

>The biggest problem I have is what to do about an antenna. The car has a

>topic would be appreciated.

Take a key and go along both sides of the car making big scratches. Now
it's not pristine any more, so you can get out the Black and Decker and
DRILL THAT HOLE. (The keying is optional, but if that's what it takes to
get your nerve up, do it, someone will anyway sooner or later.)

>hints?

Listen to Farnsworth coding, this is where the letters are sent at a much
higher speed than you can copy, but with an intercharacter space that you
can deal with. The symbols are transmitted as if at 16wpm, a speed that
is typically much beyond the capability for one to hear the individual dits
and dahs, but the characters are presented at a rate that would by typical of
5wpm (PARIS transmitted 5 times a minute).

The ARRL code tapes use farmsworth coding.

I hear a lot of talk about 'plastic case' HTs and noone makes metal HTs these days. Well, I bought a 20m HT, that is a great backup rig in METAL CASING (Aluminium). It offers 2W output, SSB or CW, in a case that is similar in size to the 202 from Radio Shack (the case is the heatsink).

It takes either 6 AA batteries or 7 AA NiCd's and covers two 50KHz ranges on the 20 meter band. Made by Mizuho in Japan and sold here (in Europe). It used to be sold by AEA in the US when the sunspots were high andmaybe still be on sale by some retailers. It comes in 80, 40, 20, 15, 10 and 6 meter versions.

Now when you add the Ramsey 20m 20W power amp you have a great 20W backup rig that works wonders with normal batteries on HF. I bought it for about 200 UK pounds (too much money, but then the dealer in the UK (Waters & Stanton) wants huge margins from our hobby so I dont recommend you buy anything from them.

So there are metal HTs and there are HTs for HF and they work great. I dont recommend you get a whip antenna for 20m, but connect your battery HT to your beam and work wonders AND keep your electricity costs at minimum.

: dits and dahs rather than hearing the "sound" of letters and words. Any
: hints?
: --

William,
It is obviously too late to advise you NEVER to count dits and dahs
while you are learning code! That is effectively like looking at the
keyboard while you are learning to type...it is extremely difficult to
"unlearn" that step. Your mind thinks it really does need to look at
the keys...or count the dits...and it won't believe you if you try to
tell it otherwise.

I'd guess that the only way to get over this problem is to use the
"farnsworth method" and begin listening to letters being sent at a
speed sufficient to make counting impossible...say 18-20 wpm, or
whatever works for you. This will force you to "re-learn" the code as
sounds rather than a number of characters.

At this point, you have two hurdles to get over before you can gain
any kind of speed or proficiency. The first is what you
describe...I doubt if you will be able to copy much above 5 wpm
counting. The second problem is faced by all advancing CW
operators...and that is simply "translating". The usual speed limit
for copying code by translating is 10-12 wpm. To achieve higher
speeds the "sound" must _become_ the letter...just as you do not need
to think about where the right key is on a typewriter (assuming you
can touch-type).

Good luck! CW will be a chore until you pass these hurdles, but if
you stick with it you will find it to be a pleasure, and an ability
you can be proud of.

Rec.radio.amateur.misc Frequently Asked Questions
Part 1 - Introduction to the FAQ and Amateur Radio
------------------------------------------------------------------------------

This is a regular posting of frequently-asked questions (FAQ) about Amateur
Radio, also known as Ham Radio. It is intended to summarize some common
questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list
as well as to help beginners get started.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them.
* If you are a new user, please print and review the FAQ articles and look at
the instructions in the news.announce.newusers newsgroup before posting any
articles. If you don't find the answer in the FAQ and you have tried
elsewhere, then you have "done your homework" and it is acceptable to ask
the question on the UseNet newsgroups. Along with your question, please
state where else you have looked for the answer so others also know that
you have done your homework.
* If you are an experienced user, please help by refraining from answering
frequently-asked questions on the newsgroup if they are already answered by
the FAQ articles. Instead, send e-mail to the user who asked the question.
(It will be helpful if you include the part of the FAQ that answers their
question, but not the whole thing.)

The FAQ cannot always prevent people from posting repetitive questions. But
even if hundreds of questions get posted, it saves you from having to answer
them hundreds of times. Also, a friendly pointer to the FAQ in your first
answer can help that person refer to the FAQ in the future. That is when we
can begin to get a real savings of network bandwidth.

To reduce the size of each article, the FAQ information is posted in 3 parts:
Part 1 - Introduction to the FAQ and Amateur Radio
Part 2 - Amateur Radio Organizations, Services, and Information Sources
Part 3 - Amateur Radio Advanced and Technical Questions

Table of Contents
-----------------
Dates indicate last modification.
```

Part 1 - Introduction to the FAQ and Amateur Radio
** Table of Contents (6/93)
** Introduction to the FAQ (11/92)
* How to Contribute to the FAQ Articles (6/93)
* Please Do Not Ask Questions of the Editors (8/94)
* Call for FAQ Editors (8/94)
* Acknowledgements (6/93)
* Notes on "Netiquette" (1/93)
** What is Amateur Radio? (11/92)
** Who can become a ham? (6/93)
** Where can I locate information and books on Amateur Radio? (9/93)
** How much does it cost? (9/92)
** Where can I take the tests? (9/93)
** What are the tests like? (6/93)
** What can I do with a ham radio license? (5/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (2/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.

Where should I start? (2/94)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do? (pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US? (9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies do JPL and GSFC retransmit the shuttle audio? (10/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 1--

** Introduction to the FAQ

* How to Contribute to the FAQ Articles

We accept suggestions from the Amateur Radio community. Please consider that all new contributions need to be SHORT and concise in order to be included. If a contribution is too long, the FAQ editors can help you find a more appropriate FTP archive or mail server for your article.

We always accept corrections. Please allow some time (often not the next issue of the FAQ) because the FAQ maintainers do this as volunteers so each must give higher priority to their employers.

Send correspondence to hamradio-faq@amdahl.com so that it will reach all the FAQ coordinators: (listed in alphabetical order)

Ed Hare KA1CV ehare@arrl.org (Newington, CT, USA)
Jack GF Hill W4PPT root@jackatak.raider.net(Brentwood, TN, USA)

Ian Kluft KD6EUI ikluft@oes.amdahl.com (Santa Clara, CA, USA)
Paul Schleck KD3FU pschleck@gonix.com (Omaha, NE, USA)
Chris Swartout N6WCP cas30@uts.amdahl.com (San Jose, CA, USA)
Steve Watt KD6GGD steve@wattres.sj.ca.us (San Jose, CA, USA)
Rosalie White WA1STO rwhite@arrl.org (Newington, CT, USA)
Derek Wills AA5BT oo7@astro.as.utexas.edu (Austin, TX, USA)

* Please Do Not Ask Questions of the Editors

We wish it wasn't necessary to say this. Please don't send questions to the editors (unless you are sending an answer with it as a submission for the FAQ.) The proper procedure for questions on UseNet is
1) Read the FAQ
2) if it isn't there, check other sources (see Part 2 of the FAQ for electronic sources including Mosaic/WWW)
3) post on the newsgroup

The Internet has become an atmoshpere where questions are asked of everyone as if they have an infinite amount of time to help. The volunteers who maintain the FAQ do not have time to answer questions. Some FAQ maintainers on other newsgroups have been led to believe that no good deed goes unpunished - let's avoid bringing the same end to this effort.

* Call for FAQ Editors

As with any volunteer effort, new volunteers are often needed. The previous paragraph may have already given a hint about this: we need a new editor to post the Ham Radio FAQ. Preferably this should be someone who has enthusiasm for Ham Radio, experience with UseNet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby so the editorial review group is intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is written in PERL. So it would be a plus for volunteers to post the FAQ to have PERL installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact hamradio-faq@amdahl.com.

* Acknowledgements

All questions listed as modified "pre-4/92" are entirely Diana Carlson KC1SP's work or her editing of a contributor's work. Diana established this FAQ and credit is due to her for founding this project.

Thanks to Devon Bowen KA2NRC for accepting this FAQ in e-mail every month to keep the FTP archive at ftp.cs.buffalo.edu up-to-date.

* Notes on "Netiquette"

The rec.radio.amateur.misc newsgroup and Info-Hams mail list have a large daily volume of traffic. They can operate more efficiently if the following netiquette guidelines are followed. Please take them seriously.

* If you are new to UseNet, the introductory articles in news.announce.newusers are required reading. Go to that newsgroup now. Definitely, read the instructions there before posting anything. Other rec.radio.amateur.* readers will appreciate it!
* Pick the right newsgroup. Use only the most specific newsgroup for your subject. For example, a question about a homebrew antenna only needs to be posted to rec.radio.amateur.antenna. Also, don't post to rec.radio.amateur.misc when the subject can go in another rec.radio.amateur.* newsgroup. So, when there is a more specific newsgroup, that's the one you want.
* When posting a followup article, ALWAYS try to minimize the number of lines of quoted material from the original article.
* As a general rule when you try to determine whether to reply to someone by e-mail or with a followup article, remember to "praise in public, criticize in private." It's OK to disagree technically but be careful not to attack the person with whom you disagree. Also, be careful with your use of the word "you" when posting a follow-up article. Many unnecessary flame wars have started that way.
* Use a descriptive subject. For example, a message subject of "Ham Radio" tells the reader NOTHING about the contents of your article since the whole newsgroup is about Ham Radio. Other examples of subjects which are so broad that they become useless could include, "Help," "A Question," "Antennas," or "Frequencies." Maybe "Books on Antennas?" or "Where can I find Repeater Frequencies?" would be better, for example. Remember, in a busy newsgroup a lot of users decide which articles to read from the subject line alone. If you post, don't deprive yourself of an audience!
* Before answering a question, check if the FAQ adequately answers it or if someone else already answered it. If you have more to add, make sure to reference either the FAQ or the related articles.
* If a user posts a question which is directly answered by the FAQ, there is no need to post an answer - the information is already available on the newsgroup. Instead, just send an e-mail message which politely explains where to find the FAQ. They will probably appreciate it if you include the answer to their question. (Don't send a "nastygram" - that would just discourage future participation.)
* Pay attention to the size of your audience - use the "Distribution:" header. If you leave it blank, your message will go to every civilized country in the world and occupy disk space in all news systems in all those places. If that's what you intend, that's fine but make sure your article is relevant outside your country. (In particular, Hams should already know there is more to the world than just their own country.)
* If you have an item for sale, please limit the distribution area so that, for example, an article about a radio for sale in New Jersey won't get to California or Europe. If you wish, you may cross-post

your for-sale article to rec.radio.swap.
* Software sources should be posted to either alt.sources, comp.sources.misc, or comp.sources.* for a specific machine type. Software binaries should be posted to the appropriate subgroup of comp.binaries.

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service whose primary aims are public service, technical training and experimentation, and communication between private persons. Amateur Radio operators are commonly called hams. Hams often communicate with each other recreationally but also provide communications for others at public events or in times of emergency or disaster.

** Who can become a ham?
The answer to this question differs in every country.

The answer for the USA is listed below. If your country has a newsgroup specifically for it (i.e. UK, Australia, Germany) the most accurate answers can be found there. See Part 2 for the list of region-specific newsgroups.

If that doesn't help, the American Radio Relay League (ARRL) may be able to help because they communicate with similar organizations in other countries, probably including yours. They can be reached by electronic mail or surface mail (see Part 2.)

In the USA, anyone who is not a representative of a foreign government can be an Amateur Radio operator. There are tests that you must pass to get a license, however the tests are not insurmountable. On that general level, the requirements are probably similar in almost every country.

For more information on becoming a Ham in the USA, the ARRL has a toll-free number where you can request information: 1-800-32-NEW-HAM (don't worry about the number being one digit too long - the phone system ignores it.) Other information can also be obtained from the ARRL e-mail information server in the file called PROSPECT. Details on the server are in Part 2.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications.

For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a combined Novice and Technician License manual, and an FCC

Rules manual, costing around $32. The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

Information on Ham Radio can also be obtained with your computer. Part 2 of this FAQ contains a significant amount of material on that subject.

** How much does it cost?
To take the tests for any class of amateur radio license, there is a small charge (around $5-$6 currently) to cover copying costs and running the testing sessions. (Due to changes in 1993, Novice tests are under same procedures as the others.) The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests Used to be given by any two qualified hams of General class license or above. Now all the license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

See also the section "Where can I find VE sessions in my local area?" in Part 2 because more information is available via UseNet.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (around $5-$6 for 1993); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur Civil Emergency Service).
* Aid members of the US military by joining MARS (Military Affiliate Radio System).
* Participate in transmitter hunt games and maybe build your own direction-finding equipment.
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some electronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals

back to people on the Earth.
* Experiment with Amateur TV (ATV), Slow-Scan TV (SSTV), or send
still-frame pictures by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any
kind over ham radio. Interference to other hams or services, as
well as obscene, profane or indecent language is not tolerated and
is illegal. Music and broadcasting are not allowed on ham radio.
Some personal conversations may not be appropriate to Amateur Radio.
Do you really want the whole world to hear about Aunt Mabel's
hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers)
in your local area. Look around and ask local hams. Search out local
radio clubs. As well, some people have volunteered to be an Elmer
over the Usenet. A list of UseNet Elmers and their e-mail addresses
is posted to the newsgroup monthly. If anyone wants to be an Elmer,
send e-mail to
elmers-request@unomaha.edu

There is also a lot to be said for exploring on your own. Take a
look around the FTP archives and e-mail servers listed in Part 2.
There's so much out there on UseNet, you'll find plenty of things
you're interested in.

** Should I build my own equipment or antenna?
[see also rec.radio.amateur.homebrew and rec.radio.amateur.antenna]
"Homebrewing" is a fun and educational part of ham radio. It is a
thrill to build your own transmitter and put it on the air. However,
building your own receiver can be quite complicated; if you don't have
electronics experience, you may want to buy a receiver instead. Most
homebrew transmitters are QRP (transmit very low power). That's fine
for an experienced ham with a very good antenna, but a Novice ham will
just get frustrated. Your first rig, therefore should NOT be a home-
brew.

Antennas can be much simpler projects than the transceiver, though
some types are also quite involved. Most hams build their own anten-
nas for base station use and buy antennas for mobile (car) use. Most
beginner ham books describe how to build different types of antennas.
Order of difficulty, from easiest to more difficult, for some common
antennas are: wire dipole, Zepp, Yagi, Quad, and Log-Periodic. Books
from many sources, including ARRL and several Hams, discuss antennas
in depth.

When building or even understanding antennas, it is good to know the
relationship between the antenna element length and the frequency or
wavelength it is designed for. An antenna performs best at multiples
of 1/4 of that wavelength, though 5/8 wave also has beneficial qualit-

ies. The wavelength is related to the frequency with the following formula:

wavelength (in meters) = 300 / frequency (in megahertz)

You do not need a huge antenna or tower like ones you may see around your neighborhood. Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.

If you can afford new rigs and antennas, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a "hamfest" (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.

Rec.radio.amateur.misc Frequently Asked Questions
Part 2 - Amateur Radio Organizations, Services, and Information Sources
------------------------------------------------------------------------------

Questions discussed in Part 2: (dates indicate last modification)
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (2/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 2--
```

** Where can I find Ham Radio information with a computer?
This question has many answers spanning several electronic media including WWW, UseNet, electronic mail, the Internet, dialup BBS's and others. Various electronic information sources are summarized under the subheadings that follow.

All electronic mail addresses listed are in Internet format. If your site is not connected to the Internet and does not support Internet-style mail addresses, you will need to contact either your system administrators or a local "guru" to find out how or if you can send mail to the sites listed. Ask them, "how can I get mail to the Internet?" and show them the address you're interested in.

* Mosaic, World-Wide Web, Gopher, and WAIS
A new generation of information retrieval tools exploded into great popularity on the Internet in 1993 and 1994. They are the gopher protocol, wide-area information server (WAIS) and World-Wide Web (WWW). They are indeed complete topics of discussion unto themselves which can be found, among other places, in the following newsgroups:

comp.archives
comp.infosystems.announce
comp.infosystems.gopher
comp.infosystems.wais
comp.infosystems.www

Please read those newsgroups if you have questions about the software or how to use it.

At the current rate of growth, we can never hope to list all the servers. We would like cooperation from people who assemble WWW servers to add references to other useful Ham Radio information available at other WWW, gopher, WAIS, and FTP sites. That way the FAQ can direct readers to servers that can reference more servers with more information than we can include on a periodic UseNet posting.

Some useful URLs (uniform resource locators) which can be used with WWW (Mosaic, Lynx, etc.) are as follows:

General Ham Radio Information:

Amateur Radio Virtual Library
http://buarc.bradley.edu/wwwvl-ham.html
Ham Radio FAQs & info: (The OSU server turns this into WWW hypertext)
http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/top.html
file://rtfm.mit.edu/pub/usenet/radio/ham-radio
all radio FAQs & info:
http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/top.html
wais://rtfm.mit.edu/usenet/radio
Federal Communications Commission:
http://www.fcc.gov/
http://www.fcc.gov/1/Private_Radio
North Carolina State HamRadio WWW Server:
http://www.acs.ncsu.edu/HamRadio

Yahoo's Ham Radio Index:
http://akebono.stanford.edu/yahoo/Entertainment/Hobbies_and_Crafts/Amateur_Radio/
EINet Galaxy's Ham Radio Page:
http://www.einet.net/galaxy/Leisure-and-Recreation/Amateur-Radio.html
O'Reilly's Whole Intrernet Catalog's Ham Radio Page:
http://nearnet.gnn.com/gnn/wic/hobbies.02.html (Eastern USA)
http://www.digital.com/gnn/wic/hobbies.02.html (Western USA)
http://bond.edu.au/gnn/wic/hobbies.02.html (Australia)
http://quasar.sba.dal.ca:2000/gnn/wic/hobbies.02.html (Eastern Canada)
http://www.wimsey.com/gnn/wic/hobbies.02.html (Western Canada)
http://www.Germany.EU.net/gnn/wic/hobbies.02.html (Germany)
http://www.ntt.jp/gnn/wic/hobbies.02.html (Japan)
http://www.elvis.msk.su/gnn/wic/hobbies.02.html (Russia)
http://src.doc.ic.ac.uk/gnn/wic/hobbies.02.html (UK)
University of Buffalo's FTP server:
file://ftp.cs.buffalo.edu/pub/ham-radio
Oakland University's FTP server:
file://oak.oakland.edu/pub/hamradio

Specialized Topics:

SAREX: Shuttle Amateur Radio Experiment
http://hypatia.gsfc.nasa.gov/sarex_mainpage.html
Morse Code Demo
http://macgwy-mac2.gsfc.nasa.gov/GARC/exp/morse.html

Although still very much works-in-progress, the last two URL's
are excellent examples of WWW servers with numerous references
to other resources.

* The rec.radio.* newsgroups
The primary distribution mechanism for this FAQ is UseNet. There
are several newsgroups dealing with Amateur Radio and other aspects
of radio. The full list is as follows:

rec.radio.amateur.misc (*) Ham Radio - misc/general topics
rec.radio.amateur.antenna Ham Radio - antenna construction/theory
rec.radio.amateur.equipment Ham Radio - manufactured equipment/mods
rec.radio.amateur.digital.misc Ham Radio - digital radio modes: packet/
AMTOR/RTTY/etc (formerly r.r.a.packet)
rec.radio.amateur.homebrew Ham Radio - radio experimentation, kits
rec.radio.amateur.policy Ham Radio - policy & regulation
rec.radio.amateur.space Ham Radio - satellites, EME, shuttle/MIR
rec.radio.broadcasting public broadcast radio
rec.radio.cb Citizens' Band Radio
rec.radio.info (*) periodic info from all rec.radio groups
rec.radio.noncomm misc non-commercial radio topics
rec.radio.shortwave Shortwave Radio
rec.radio.scanner Utility Radio above 30Mhz
rec.radio.swap radio equipment wanted and for sale

Country- or region-specific newsgroups include the following:
aus.radio Australia (misc radio topics)
aus.radio.amsat Australia (amateur satellites)
aus.radio.packet Australia (packet radio)
de.comm.ham Deutschland/Germany
fj.comm.ham Japan
uk.radio.amateur United Kingdom
in.ham-radio USA, Indiana
sbay.hams USA, CA, South Bay Area/Silicon Valley
triangle.radio USA, NC, Research Triangle area

This FAQ is cross-posted to the newsgroups marked with asterisks (*).
It is also cross-posted to rec.answers (the archive for FAQs in the
rec.* newsgroups) and to news.answers (UseNet's general repository for
FAQs.) These should be the first places to look for new current
copies of the FAQ.

Most of the rec.radio newsgroups have their own FAQs as well.

* The ARRL e-mail server
ARRL is the American Radio Relay League, representing and promoting
Amateur Radio in the USA. They have established an automated file
server which responds to information requests via electronic mail.
To use the server, send mail to info@arrl.org with any number of
one-line commands in your message. Valid commands are as follows:

help sends more detailed instructions about the e-mail server
index sends a list of the files currently available
send file sends a file (replace "file" with the file's name)
several files are referenced by name in parts of this FAQ
quit ends command processing - use it if a signature will be
appended to your message

The server program will respond to the commands, each in a separate
message. Among many other informative files, a current copy of the
FAQ (updated monthly) can be obtained from the ARRL e-mail server.
Other parts of this FAQ refer to specific files on the ARRL server.

* The KA6ETB e-mail "HAM-server"
Steve Harding KA6ETB has an e-mail server on his 386 PC at home with
over 40 megabytes of Ham Radio-related files (at the time of this
writing.) You can request any of those files with an e-mail message
to the HAM-server at ham-server@grafex.sbay.org. This site
has a mostly-different selection of files than the ARRL, though some
overlap is unavoidable. The HAM-server seems to have more emphasis
on MS-DOS programs and binary files though there are many plain-text
articles as well.

Use these commands to send requests to the KA6ETB HAM-server.
HELP instructions and info about the HAM-server
INDEX list of files available from the system
GET <file> send a file (see the HELP notes for more info on
getting binary files in uuencode or xxencode format)

NEWFILES <date> list of new files since the given date
PING used for testing your path to the HAM-server, it just
sends a simple reply so you can look at the path data
QUIT makes the HAM-server stop reading the message (so it
won't try to read your .signature)

* The Internet File Transfer Protocol (FTP)
Sites connected to the Internet can access large amounts of data
almost anywhere in the world, often at high speeds. One common way
to transfer the data you want is FTP. Some sites offer a service
called "anonymous FTP" which allows remote users to access a set of
public files without requiring a password.

Perry Rovers coordinates a fairly definitive list (formerly
maintained by Tom Czarnik) of anonymous FTP sites, their IP
IP numbers, time zones, general contents, and access policies
which he posts to several newsgroups, including comp.archives,
comp.sources.wanted and news.answers. It is itself available
via anonymous FTP (how about that?? :-) from (among other places)
rtfm.mit.edu under directory /pub/usenet/news.answers/ftp-list.

For specific information about exact locations of files by name,
the Archie database server may be of help. First check if anyone has
installed the "archie" program on your machine and use it. Archie may
also be accessed by telnetting to one of many sites. The list
of archie sites is numerous and growing fast. For a current
list of sites, telnet to archie.sura.net (login "archie"), then
please use the one closest to you to conserve network bandwidth.

For those without telnet capability, the database may be accessed non-
interactively via mail server. Send E-mail with the word "help" to
archie@host where host is one of the Archie sites above.

The above two resources (the FTP list and the Archie server) are
extremely powerful tools for finding out "what's out there" at various
FTP sites around the world. *PLEASE* exhaust their capabilities
before posting requests to the net.

The following is a brief summary of major ham-related FTP sites and
places where you can obtain a current copy of this FAQ:

ftp.cs.buffalo.edu:/pub/ham-radio
(submissions to this ftp site should be made to
bowen@cs.buffalo.edu) - Contains many ham radio files,
including the FAQs, Elmer list, SWL and scanner info, Packet
FAQ, examination opportunities, information on various
regulations, information on commercial radios (i.e. GE or
Motorola), SSTV (slow-scan TV), HTs (handheld transceivers).
Recently, the rec.radio.amateur Working Group (rra-wg,
see below for more information about their mailing list)
has started to encourage archivers of radio modification
instructions to mirror them at this site. In this way,

maintainers may come and go but the collection of
mods will remain continuously available (and undergo
constant positive growth). This FAQ is updated monthly
here.
grivel.une.edu.au:/pub/ham-radio
Australian mirror of ftp.cs.buffalo.edu
nic.funet.fi:/pub/ham
This is one of the largest FTP sites in Europe and maybe the
most popular. /pub/ham/info contains a mirror of Buffalo.
Other topics available here include amiga, antenna, HF, packet,
satellite, scanners, program sources, VHF and others.
This site is also one of the article archives for the
rec.radio.info newsgroup.
ftp.uu.net:/networking/ka9q
A large FTP site in the USA - UUNET contains sources and
binaries for many different types of computers.
ftp.ucsd.edu:/ (site was down when we were looking for the new path)
The "home" site (with the most recent versions for the largest
number of different computer platforms) of the KA9Q TCP/IP
Network Operating System (NOS), other ham-related software,
and the archives for the Info-Hams, Packet-Radio, Ham-Policy,
Radio-Info and TCP-Group digests.
vixen.cso.uiuc.edu:/pub/ham-radio
This site contains the HyperCard Hamstacks written by Diana
Carlson as well as ASCII readable ham radio question pools.
ftp.apple.com:/pub/ham-radio
Ham software and information, especially Macintosh software
rtfm.mit.edu:/pub/usenet/news.answers/radio/ham-radio
all participating FAQs and periodic informational postings are
archived here, including those from the rec.radio.* newsgroups
which can be found in pub/usenet/news.answers/radio.
Participating FAQs are automatically archived here when they
are posted on UseNet.
ftp.amdahl.com:/pub/radio/amateur
cd pub/radio/amateur - the most up-to-date copy of the FAQ
(updated nightly when changes are made)
world.std.com
The Ham Radio archive at this site has been moved to
oak.oakland.edu.
oak.oakland.edu:/pub/hamradio
oak.oakland.edu:/pub/hamradio/arrl
Mac, Amiga, Atari, PC files in their own subdirectories.
Also radio mods and an Internet mirror of the ARRL info
server.

See also the file FTP-INFO on the ARRL e-mail server.

If you experience difficulty connecting to the above FTP sites, some
troubleshooting hints are shown below. The unfortunate situation here
is that Netnews is far more prevalent than direct Internet hookups,
accurate name servers, smart mailers and routers, and of course,

telnet and FTP client services. What this means is that your trouble
may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line
and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If
this is the case, then you have no direct connection to the Internet
and thus cannot use real-time interactive services like FTP and
telnet.
* If you are at a college or university, your host (ie, the computer
you are logged onto) may be on the Bitnet network, which has an
email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host
have telnet and/or FTP client programs? (ie, if you type "ftp" or
"telnet" at your command prompt, do you get anything?) Many hosts,
particularly IBM mainframes not running Unix, do not support these
services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to
misconfigured connections and inaccurate host tables/name servers
(*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar
error, try telnetting via the IP number, a set of four 1-3-digit
numbers separated by periods (eg, 198.137.220.1). The exact IP
number for the site can be obtained via the nslookup utility, if
your computer supports it. (The FAQ does not print IP addresses any
more because they change so often.) Your system may not recognize
the "fully-qualified domain name" (like callsign.cs.buffalo.edu),
but it should ALWAYS recognize an IP number if their network is
reachable from yours.
* If you get "network unreachable" check with some more knowledgeable
users if your site is actually connected to the Internet. If it is,
a link in the network may be temporarily disconnected for maintenance
(or by accident.)
* In the case of telnetting to a non-default port (as in the case
with the callbook servers), if telnet <host> <port#> doesn't work,
but you can telnet to the default login port (ie, no qualifiers),
then the manner at which the port qualifier is entered may be
system dependent. Also, at many education sites, it is common
practice to block telnet connections above TCP socket 1000 or
so in a somewhat misguided attempt to block usage of
"recreational" TCP socket applications such as Multiple User
Dungeons (MUD's) or Internet Relay Chat (IRC). In most cases,
a polite word to the system administrators, pointing out
the worthwhile services available on sockets 2000 and 3000
will get telnet service unblocked, at least for those ports.
* Syntax for telnetting from different operating systems differ.
Some common command syntaxes are: (angle brackets are for
readability, do not type these in literally)
Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:

telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>
telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* Compression techniques are different for different operating systems.
However, these hints should help:
foo.sit needs Macintosh UnStuffit to unstuff
foo.hqx needs Macintosh BinHex to uncompress
foo.tar needs Unix or GNU tar utility to extract archived files
foo.Z needs Unix 'uncompress' to uncompress or VMS
compress_vms.exe (on gatekeeper.dec.com) will work too.
foo.z needs the GNU gzip utility (from prep.ai.mit.edu) to
uncompress it. gzip will also uncompress *.Z files.
If more than one method was used,
like for foo.hqx.Z, start at the outside and work in (so uncompress
on Unix with 'uncompress' first, transfer to MacIntosh, then
uncompress with BinHex to get uncompressed file).
* There is an excellent introduction to FTP and archiving software
regularly posted to comp.binaries.ibm.pc and news.answers.
* If all else fails, ASK your system administrator or check system
documentation.

* Access to FTP archives via electronic mail
ANY BITNET, EARN, or NorthNET site can access the Princeton mail
server. It will be most efficient if you know the complete path
and filename for anything you wish to transfer, but you can use
'cd' and 'ls -l' commands to move about and browse the remote site's
directories. The Archie database server may also be useful to search
for files and their directory locations on FTP sites around the world
(see below). Please be patient when using non-interactive mail
servers such as BITFTP as each request may take several hours (or
longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for
BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For
example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII
CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com. Commands include: REPLY <mailaddr>,

CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS, COMPACT,
UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>, QUIT,
HELP. Get the help file for more information by sending mail with
the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example of
a request:
reply your_name@your_site
connect vixen.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/extra-pool.txt
quit

A note on the use of FTP mailservers: If you want to use FTP
mailservers, like FTPMAIL, please be considerate of any systems that
your mail must pass through. The quickest way to find yourself cut
off from the world is to make the admins of sites that pass your mail
pass 60Mb of X11 graphics system source. If you need large amounts
of information from a mailserver, contact your admin for help -- it
may already be available, or he may know a better way to get it.

* The UCSD Ham-Radio mail list: rec.radio.amateur.misc by mail
You can use rec.radio.amateur.misc even if your site has no NetNews
feed. To subscribe to rec.radio.amateur.misc, send email to:
Ham-Radio-Request@ucsd.edu
In the body of the message, write:
subscribe Ham-Radio
If your local e-mail software does not provide a valid return address
(i.e. Bitnet, many Milnet sites, and many non-Unix e-mail packages)
you can provide your return address between the "subscribe" and the
name of the mailing list (i.e. "subscribe myname@here.org Ham-Radio".)

Similarly, to subscribe to some other rec.radio.* newsgroups, use
the following directions: (all addresses here are @ucsd.edu)
Request address List address Newsgroup
Ham-Radio-Request Ham-Radio rec.radio.amateur.misc
Ham-Digital-Request Ham-Digital rec.radio.amateur.digital.misc
Ham-Policy-Request Ham-Policy rec.radio.amateur.policy
Ham-Equip-Request Ham-Equip rec.radio.amateur.equipment
Ham-Ant-Request Ham-Ant rec.radio.amateur.antenna
Ham-Homebrew-Policy Ham-Homebrew rec.radio.amateur.homebrew
Ham-Space-Request Ham-Space rec.radio.amateur.space
Radio-Info-Request Radio-Info rec.radio.info

IMPORTANT NETIQUETTE NOTE: never ever send a request to subscribe
or unsubscribe from *any* mail list to the list itself. Always use
the REQUEST address. Otherwise you'll end up broadcasting your
request to everyone on the list and getting lots of people angry at
you. (Seriously - this is a completely avoidable mistake and it
does irritate a lot of people.)

TO UNSUBSCRIBE, follow directions above, changing the command word "subscribe" to "unsubscribe"
DON'T POST TO THE NEWSGROUP ITSELF! USE THE REQUEST ADDRESS!
Help is available by using the command word "help". Note that command words MUST be the first word on each line of the message.

You can post to rec.radio.amateur.* by sending your posting email to the mail list addresses at ucsd.edu. Since rec.radio.info is a moderated newsgroup, requests to post to it may be sent to Radio-Info but they will be mailed to the moderator, rec-radio-info@ve6mgs.ampr.ab.ca, for posting.

All of the Amateur radio newsgroups are archived for FTP on ucsd.edu under subdirectory mailarchives/{mail-list-name}. However, Radio-Info is not archived at UCSD because almost everything is either on one of the other lists or in the news.answers archives at rtfm.mit.edu (see also funic.funet.fi above).

To subscribe to rec.radio.shortwave, send email to listserv@cuvma.columbia.edu, message is "subscribe swl-l (your name)"

* Telephone BBS's with Ham-related information
Among many, a large one is WB3FFV. Use 8/N/1. The phone numbers are
(410)-661-2475 1200-38400/MNP5/V32bis/V42bis
(410)-661-2598 1200-38400/MNP5/V32bis/V42bis/PEP
(410)-661-2648 1200-19200/MNP5/V42bis/PEP
Login is bbs, no password. This BBS is also available via UUCP, login is uucpanon, no password. For a list of available files, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings are 8 bits, NO parity, 1 stop bit. N8EMR has a comprehensive list of other ham-related BBS's on-line.

ARRL has a BBS called "HIRAM", named after the League's founder. The number is 203-666-0578. More information can be obtained from the file ARRL-BBS on the ARRL e-mail server.

For a more complete list of Ham Radio BBS's, see the file BBS on the ARRL server. See also the file BBS_LIST.TXT on the KA6ETB HAM-server. Also see many of the FTP sites listed earlier in this section. There is now way to keep a list like this anywhere near up-to-date so giving you a lot of sources is the next-best thing!

* Callsign servers and geographical name servers
We know of online callsign servers for the USA, Canada and UK.

If you are at an Internet site you can connect using telnet to the following callbook server (covering the USA and Canada):
callsign.cs.buffalo.edu

There is also a general geographical name server at
martini.eecs.umich.edu

For the UK, you can use a WWW client to access the following URL:
http://www.mcc.ac.uk/htbin/callbook

The callbook server sits on port number 2000 and the geographical name server sits on port 3000. These are different port numbers than what telnet usually defaults to. So if you just telnet to these machines, you will get a login prompt instead of the server. How you tell your telnet program to connect to port 2000 or 3000 instead of the default port is operating system dependent but it is usually done with a line like

telnet callsign.cs.Buffalo.edu 2000

If this doesn't work, check the telnet/FTP troubleshooting hints above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory and they support fairly detailed help facilities. The first command you should execute when connecting to one of these servers is "info". This will list general info about that server and how to use it. You should then type "help" to list the various commands available. Typing "help" followed by a command name will give you a little more detail about that command. Servers allow searches by call, last name, zip code or city and also provide regular expression filters to trim your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty Carruth, N7IKQ. This database currently contains US and Canadian callsigns and it does not contain club calls. A new version of the database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com (The UUCP address is ...!uunet!dptspd!callbook). In the body of the text, say "lookup" followed by callsigns you want to look up. If your mailer appends signature files, you should put a line "quit" at the end of your request (before the signature file). If you want help, put the word "help" on a line by itself. Here is what a request might look like:
help
lookup kc1sp wn4bbj
lookup n0fzd
quit

There is another email callsign server at callbook@n8emr.cmhnet.org. The subject line is the list of callsigns to lookup. All other lines are ignored. This same callsign server can be accessed with packet radio via cbook@n8jyv.#cmh.oh.usa.na. The body of the message should include "REPLY n8jyv!HOME_BBS!CALL" (where HOME_BBS is YOUR home BBS, and CALL is YOUR callsign), carriage return, "CALL call1 call2 ..." (where call1 call2 .... is space separated list of callsigns you want to lookup).

If you are a packet radio station, callserver data is available from REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns,

separated by spaces. For Canadian calls, use the callserver at
REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an
OS interface to the MBL packet BBS using the Buckmaster CD-ROM
callsign database.

The FCC "call sign hotline" at 717-337-1212 is available for those
who wish to listen to the call signs allocated in each group for each
district. This requires only a touch-tone telephone to use.

* FTP access to FCC Part 97 and FCC Amateur Radio question pools
Part 97 is part of the FCC regulations and only applies to the USA.
As of 1/94, a current copy can be found at ftp.cs.buffalo.edu in
the /pub/ham-radio directory.

An ASCII copy of the question pools are available by ftp from
the ARRL e-mail server.

* Lists of radio modifications and extensions
[see also rec.radio.amateur.equipment]
The largest collection of mods data that we know about is kept at
ftp.cs.buffalo.edu in the /pub/ham-radio/mods directory. The
maintainer of this archive strongly encourages all existing
archivers of mods to mirror their collections on this site.
in this way, maintainers will come and go, but the collection
of mods will remain stable and accessible.

There is a packet radio Mods Server. To get the directories, send
a packet as follows:
SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warranty and
that these mods are NOT guaranteed to work. This list is supplied
here because it is a frequently-asked question on the newsgroup.

** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net. Their e-mail
addresses are available from the ARRL e-mail file server in the
file called "EMAIL".

ARRL requests that you include your postal address (the slow kind) in
case they need to send you nonelectronic material in answer to your
request.

W5YI, a large VEC, can be reached at the following address:
Fred Maia, W5YI 3511297@mcimail.com

** "Why doesn't the ARRL do...?"
If you want the ARRL to do something, tell them! Direct input from a
concerned member (or, actually, any concerned Ham) carries a lot more
weight than hearsay from any source. Their e-mail addresses are

available from the ARRL e-mail file server (see above). They want direct input - that's why those addresses are available.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones (this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY 11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449, FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet 70310.775@compuserve.com - more technical ham radio articles
QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655. Subscriptions to 201 Lathrop Way, Ste D, Sacramento, CA 95815, (800) 365-SUBS - lots of special interest columns, like QRP, ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 - up-to-date information on Amateur Radio happenings, including VE information and statistics

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In general, you send a bundle of foreign (not States!) QSL cards to the outgoing bureau in Newington, Connecticut, along with a label off of your QST magazine (which shows ARRL membership), along with $2 per pound of cards (approximately 150 cards) or $1 for 10 cards or less.

To use the incoming QSL bureau, you do NOT have to be a member of ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7 or 6x9, NO BIGGER, NO SMALLER) with one ounce of postage attached and with your callsign in 3/4" letters in top left hand corner where the return address label would go. If you expect a large quantity of foreign QSL cards, attach extra money or postage with a paper clip; do NOT affix extra postage to envelope. Send the envelopes to the QSL bureau for your callsign area. If your callsign is xx3xxx/5, you would send it to the 3rd call area, NOT the 5th call area. Addresses for QSL bureaus are listed in QST and on the ARRL e-mail server (see below); if you don't have access to a QST magazine, ask another ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau, not considering foreign QSL bureaus, is about 3 months. Foreign QSL bureaus and hams can be as fast as 2 months or as slow as TEN YEARS, while average is about 6-12 months.

Addresses for the US incoming and outgoing QSL Bureaus are available from the ARRL e-mail server in the files called "QSL-IN" and "QSL-OUT". See the question above

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However,

rec.aviation.misc is appropriate for CAP aviation discussions and for CAP radio information, these rec.radio.amateur.* groups are available. CAP-related files are also stored on the FTP site sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK, 10923 Carters Oak Way, Burke, VA 22015.

See also the file QRP-ADDRESSES on the ARRL e-mail server.

** How do I become a 10-10 member?
10-10 is simply an organization to sponsor the use of the 10 meter band. It was first conceived when propagation was poor on 10 meters, as a method to get more hams to use 10 meters. The past few years have been great for 10 meters worldwide. However, "the bands are closing down" again, and 10 meters will once again be limited more for local communications, except for sporadic band openings, until the next sunspot cycle.

To join 10-10, work ten 10-10 members and LOG each 10-10 number, call sign, operator's name and location. Send the list to your numeric call sign or DX area manager (as shown below), with $5.00 U.S. new membership registration fee ($6.00 for foreign addresses).

10-10 International Area Managers:
USA 1 - Al Kaiser N1API, 194 Glen Hills Rd, Meriden, CT 06450
USA 2 - Larry Berger WA2SUH, 9 Nancy Blvd, Merrick, NY 11566
USA 3 - Chester Gardner N3GZE, 9028 Overhill Dr, Ellicott Cty,MD 21042
USA 4 - KY, TN, FL, VA, NC, SC only
Rick Roberts N4KCC, 7106 Ridgestone Dr,Ooltewah, TN 37363
USA 4 - GA, AL, Puerto Rico only
Jim Beswick W4YHF, 112 Owl Town Farm, Ellijay, GA 30540
USA 5 - Grace Dunlap K5MRU,* Box 445, LaFeria, TX 78559
*summer addr Jun-Oct Box 13, Rand, CO 80473
USA 6 - Dick Rauschler W6ANK, 4371 Cambria St, Fremont, CA 94538
USA 7 - Willie Madison WB7VZI, 10512 W Butler Dr, Peoria, AZ 85345
USA 8 - John Hugentober N8FU, 4441 Andreas Ave, Cincinatti, OH 45211
USA 9 - Jim Williams N9HHU, 240 Park Rd, Creve Coeur, IL 61611
USA 0 - Debbie Peterson KF0NV, RR 1 Box 35, Duncombe, IA 50532
All DX- Carol Hugentober K8DHK,4441 Andreas Ave, Cincinatti, OH 45211

For more info, see the file 10-10-INFO on the ARRL e-mail server.

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent required under age 17), be a US citizen or resident alien, possess a valid Amateur Radio license, possess a station capable of operating on MARS HF frequencies, and be able to operate the minimum amount of time for each quarter (12 hours for Army and Air Force; 18 hours for Navy-Marines). Novices must upgrade to Technician within 6 months, else be dropped from MARS. No-Code Techs can apply, provided

they have transmit and receive HF capability for MARS frequencies (they don't need transmit capability for Amateur HF frequencies). For application forms contact:

Chief, Air Force MARS
HQ AFC4A/SYXR
203 W. Losey St. Room 1020
Scott AFB, IL 62225-5219
(618)256-5552 Fax: (618) 256-5126

Chief, US Army MARS
HQ USA Information Systems Command
ATTN: ASOP-HF
Ft. Huachuca, AZ 85613-5000
800-633-1128

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency. The Radio Amateur Civil Emergency Service is a part of a municipal, county, or state government. This does not mean, however, that every such government has a RACES program. If your government does not have a RACES, ask them to refer you to the nearest jurisdiction that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it through 2155052@mcimail.com) and a book called "The ARRL Plan for the Disabled", available at no charge from the ARRL Regulatory Information Branch.

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try the "Radio Amateurs on Usenet" listings, maintained and posted by Mark Salyzyn VE6MGS. The articles can be found monthly on rec.radio.info and rec.radio.amateur.misc. If the copy in your news spool has expired for some reason, you can look up an entry in the list by sending an e-mail to reqnet@ve6mgs.ampr.ab.ca with either of the following commands in the body of the message:
lookup keyword keyword keyword ...
return user@machine.subdomain.domain
(Fill in the proper info for the search keyword or e-mail address.)
An automated server program will reply to your message.

If you have his/her callsign or name, you should also try one of the on-line callservers shown above. This works in most cases. (!!!)

Also try directory assistance from the phone company or the locator service provided by the Salvation Army. A Salvation Army post in your local area may be able to help you. Also, the Quarter-Century Wireless Assn maintains a collection of callbooks going back to "the beginning of time". Their address is: 1409 Cooper Drive, Irving, TX 75061. Also, the Callbook has a dial-in line for accessing new ham callsigns. Try (1-708-234-8011) at 2400 baud.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive these newsgroups as mail digests. Posting is also a one-shot thing. If you post and someone missed it, it is gone. A better way would be to announce the existence of your program here, along with information on how to obtain a copy of your program. You can also submit it to one of the FTP archive sites, which will allow the world to access it without you having to mail it to each requestor. If you just GOTTA post it somewhere, post it to more appropriate groups, like comp.sources.unix or alt.sources or comp.binaries.ibm.pc.

** Where can I get ham radio software for my computer?
See the information about Anonymous FTP, e-mail servers, and ham-related telephone BBS's above. For PC-clones, see the KA6ETB HAM-server. For Macintosh computers, see the file SOFTWARE-MAC on the ARRL e-mail server for locations to look.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by volunteer hams and provide bulletins of specific interest to amateurs, hence they are perfectly legal to rebroadcast on ham bands according to FCC Regulation 97.111B(6). To lessen the load on the dialup lines, consider getting your local repeater operator to rebroadcast it, or tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly, KC9RP, located in Illinois. The news is typically updated 8am CST Fridays. Phone numbers are 1-708-299-INFO (299-4636) and 1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
West Palm Beach 1-407-965-1234
Los Angeles 1-805-296-2407 (Instant Update Line)
Los Angeles 1-213-462-0008
NYC 1-718-353-2801
Ohio 1-513-275-9991
Seattle 1-206-368-3969

** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more
often, they are announced by local radio bulletin boards. The
local packet BBS will most likely have a monthly updated schedule
for VE sessions. ARRL or W5YI can generally be called and asked for
local VE sessions as well. Don't forget that you will need the
following when you go in for an upgrade: a copy of your current
Amateur license; your original Amateur license; any CSCEs (duplicate
not required), if applicable and less than a year old; a picture ID,
preferably a driver's license, passport or visa; and the VE test
fee (approximately $5 right now).

Bart Jahnke, KB9NM, the ARRL VEC Manager (bjahnke@arrl.org) posts a
listing of VE exams indexed by state (and some overseas sites, usually
at embassies and military bases) to the net every 6 weeks or so. The
same list can be obtained from the ARRL e-mail server under the file
EXAM-SCHEDULE. Another file of interest is EXAM-INFO.

The ARRL list is the definitive list for ARRL VEC sessions. There
are other smaller VECs around the USA. ARRL includes their schedules
when the info is available. The other VECs phone numbers are listed
with the ARRL info so you may wish to give them a call to check their
schedule if they didn't provide it to ARRL.

** Why isn't XXX available electronically?
This is a theme for a lot of common questions. For the "XXX" above,
substitute any of the following:
Callbooks
DX QSL Lists
Radio station lists
various publications
and more...

Except for the Callbook (via callsign servers), these are not available
because of any of several reasons. Either there are copyright restric-
tions, royalty fees, or the source just may not have done the work.
Also, not everyone that has information has reliable UseNet access.

** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start?
This FAQ would not be complete without a reminder that useful
resources on the net do not grow on trees, they are the work of
many dedicated volunteers. The rec.radio.amateur.* newsgroups
are very fortunate to have quite a number of such volunteers
providing everything from FAQ lists to telnettable callsign
servers. This doesn't mean, however, that there isn't room for
more information and services from additional volunteers. One
such service would be more detailed FAQ lists for the recently-
-created special-interest rec.radio.amateur.* newsgroups (such
as those for antennas, homebrew electronics, equipment and
ham radio in space) to supplement this general FAQ.

Recently an electronic mailing list for amateur radio FAQ maintainers, archive custodians, service providers, and other volunteers was set up. It is the rec.radio.amateur.* Working Group (rra-wg). Anyone with a sincere interest is welcome to subscribe by sending E-mail to rra-wg-request@amdahl.com. The readers of that forum would be more than happy to provide advice and guidance with regard to an existing information project, or even suggest a new one to fill a currently-unmet need.

4449. rec.radio.amateur.misc Frequently Asked Questions (Part 3 of 3)

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-22 05:14:36 UTC

Rec.radio.amateur.misc Frequently Asked Questions
Part 3 - Amateur Radio Advanced and Technical Questions
------------------------------------------------------------------------------

Questions discussed in Part 3: (dates indicate last modification)
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 3--

** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice privileges on 10 meters, and privileges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
Required are 5 wpm Morse code test and 30-question Novice test.
```

Technician - has full privileges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
code test.
General - has all Technician privileges, plus larger access to more
HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15,
12, and 10 meter bands. A General class amateur can give Novice
tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question
General test.
Advanced - has all General privileges, plus wider band access on 80,
40, 20, and 15 meter bands. An Advanced class amateur can
also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and
50-question Advanced test. The Advanced test is the most difficult
of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra
can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General,
Advanced and 40-question Extra test.

** What is the best way to learn Morse Code?
This is becoming an increasingly common question as many "no-code"
Technicians realize they can add more privileges to their license if
they learn Morse Code. The following list of suggestions should
be helpful in finding ways to approach the effort.

* Listen to code at a rate faster than you can copy.
* Participate in Novice-Roundup and/or Field Day. Practice whenever
you get the chance!
* Avoid the "deciphering" plateau around 5 WPM and and character
plateau at 10 WPM by listening to the fast Farnsworth-paced
"beat" of each letter and the "beat" of common words. (See the
question on Morse code speed for more information on Farnsworth
pacing.)
* Practice to develop a "copy buffer" so you copy about 5 characters
behind. (This is not easy but it's how the higher speeds are done.)
* Practice both with headphones and "open-air" copy as the code test
may be in either format. (If you only practice one, you may fumble
on the other.)
* Most of all, don't give up! Recognize when you reach plateaus
and keep trying until you break through them.

** What is the standard for measuring Morse code speed?
The word PARIS was chosen as the standard length for CW code speed.
Each dit counts for one count, each dash counts for three counts,
intra-character spacing is one count, inter-character spacing is three
counts and inter-word spacing is seven counts, so the word PARIS is
exactly 50 counts:

PPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
. - - . . - . - . . . . . .
1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
^ ^ ^
^Intra-character ^Inter-character Inter-word^

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or one count every 240 milliseconds. 13 words-per-minute is one count every ~92.3 milliseconds. This method of sending code is sometimes called "Slow Code", because at 5 wpm it sounds VERY SLOW.

The "Farnsworth" method is accomplished by sending the dits and dashes and intra-character spacing at a higher speed, then increasing the inter-character and inter-word spacing to slow the sending speed down to the desired speed. For example, to send at 5 wpm with 13 wpm characters in Farnsworth method, the dits and intra-character spacing would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the inter-character spacing would be 1.443 seconds and inter-word spacing would be 3.367 seconds.

** What is the standard phonetic alphabet?
Though no standard phonetics are required on amateur radio, good operating procedures include using the standard phonetic alphabet to help communicate more clearly. The recommended phonetics are those also in use by aviation (internationally by ICAO treaty) and some militaries (in most English-speaking countries.)
alfa bravo charlie delta echo foxtrot golf hotel india juliet kilo lima mike november oscar papa quebec romeo sierra tango uniform victor whiskey x-ray yankee zulu

The numbers are spelled differently to suggest a particular pronunciation. Also, nine was changed to "niner" to avoid confusion with the German word "nein" for "no", though that change is not commonly used by Hams. (Usually you'll only hear "niner" from Hams who are also pilots.)
zero one two tree fower fife six seven eight niner

When first making contact with another Ham, it is a good idea to say callsigns in phonetics to give the other side a better chance of understanding them correctly.

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
AMSAT Amateur Satellite Corporation [see rec.radio.amateur.space]
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version of RTTY. Also used commercially as SITOR (Simplex Teleprinter Over Radio). [see rec.radio.amateur.digital.misc]
ARRL American Radio Relay League
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for downed aircraft and missing kids and uses frequencies just outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and

does not require any license to operate [see rec.radio.cb]
CQ An on-the-air request for a conversation with anyone
"dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
to quickly check that you have not had a "duplicate" contact
with someone (on a specific band or mode) in a contest
Elmer An amateur radio mentor, or "Master Craftsman" to a new ham.
Could refer to anyone, regardless of age or gender.
FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
NTS National Traffic System, a way to send radiograms
OF Old Friend, or Old F#$%, used to denote an older ham
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
[see rec.radio.amateur.digital.misc]
PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"
QCWA Quarter Century Wireless Association, membership means you've
been a ham for more than 25 years
RTTY Radio Teletype - older form of computer communications on HF
[see rec.radio.amateur.digital.misc]
SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
[see rec.radio.amateur.space]
SK Silent Key, a nice polite way to say a ham has passed on "to
that great antenna farm in the sky"
SSB Single Side Band - need less band width than AM or FM
SSTV Slow Scan TeleVision - REALLY slow, low data rate, typically
used on the lower frequency bands
SWL shortwave listening [see rec.radio.shortwave]
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
WARC World Administrative Radio Conference, a summit meeting that
occurs every few years, required by international treaty to
determine how the spectrum get sliced up to all vying
communications services (last one was in 1992)
XYL eX-Young Lady, or wife
YL Young Lady, non-ham girlfriend or female ham
2m Shorthand for "2 meters" (144-147.995 MHz), which is a

reference to the wavelength of a common Amateur frequency
band used for local communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to
hear. It's used as a "PL Tone." PL is "Private Line", a trademark
of Motorola for their implementation of CTCSS (Continuous Tone Coded
Squelch System). Basically, the transmitter sends the signal with
the Sub-Audible tone and the receiver only opens when it hears signals
with that tone. Signals without the proper tone are ignored. This
is useful for "closed" repeaters, or for repeaters on the same
frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit.
Tone decode refers to the feature of responding to the tone on receive.
Tone squelch refers to all of the above. DTMF refers to Dual Tone
Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS
probably means Dual Tone Squelch System and refers to the feature of
providing a predefined sequence of Touch Tone digits to open the
repeater for transmit. DTSS is an alternate method from CTCSS, which
provides a way to use a "closed" repeater even if your radio doesn't
do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the US?
First, check if there is a Ham Radio-related newsgroup specific to
your country. See the country-specific newsgroups in "the rec.radio.*
newsgroups" in Part II of this FAQ.

Also, write to the ARRL and ask. They can usually tell you how to get
a license in your country. See also the ARRL e-mail server. (Details
are in Part 2.)

If you know of any location where this information is available
electronically, whether by an e-mail server, anonymous FTP, or a
contact person, please mail it to us so we can include it here. Send
it to hamradio-faq@amdahl.com.

** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)?
Editor's note (11/92): the regulations affecting this question are
being changed. Contact your local Volunteer Examiner (VE) and ask
about a VE 60-day pass. More details will be included in future
revisions of the FAQ.

This paragraph is soon to be obsolete:

You need to submit a FCC Form 610-A to the FCC, PO Box 1020,
Gettysburg, PA 17326. They will then send you a reciprocal permit
for alien amateur licensee (FCC Form 610-AL). You must be a citizen
of a country with which the United States has arrangements to grant
reciprocal operating permits to visiting alien Amateur operators.

This information is still current:

For FCC licensed hams operating abroad, the following guidelines apply:
* A reciprocal license is required in all foreign countries (that have a reciprocal operating agreement with the US), except Canada, where the FCC license is automatically valid.
* Send a SASE to ARRL Regulatory Information Branch, telling them which country you are going to visit and they will send you the info and an application form. Foreign hams can likewise request information from their national Amateur radio society.
* Submit your application with a certified copy of your Amateur license (ie, notarized copy), and fee if applicable (use a bank draft of a bank that does business in that country) to the appropriate licensing administration of the foreign country. Processing may take 30 to 90 days.
* If less than one month, you could try sending the application and pick up the permit upon arrival in that country.
* Most countries will not allow you to bring communications equipment into their country without a license or permit. If you applied, but haven't received the permit yet, show the copy and your FCC license to the customs officer, however, the equipment may still be held at customs until your departure.
* Be sure to use only those frequencies covered by your FCC license which are also used in the foreign country, unless otherwise authorized.

See also the file RECIP-OP on the ARRL e-mail server. (See Part 2.)

** My apartment or housing complex does not allow outdoor antennas, now what do I do?
[see also rec.radio.amateur.antenna]
First of all, don't despair. Many hams have similar problems. Many books offer advice for the growing group of hams that cannot put up antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.
* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up something as long as it "is invisible" or "doesn't disturb your neighbors" or "doesn't attract lightning".
* Operate primarily from your car.
* If the restriction is due to local ordinance, you may have relief via PRB-1. Meet with the local government and seek an informal compromise. It is possible to win in court...but it's expensive and time consuming.
* If you are restricted by "covenants" attached to the deed of your home, your options are severely limited. Covenants are considered to be private, voluntary contracts between individuals and are outside of the intended application of PRB-1. In many cases, you can petition the Homeowner's Association for an exception. Sometimes you can win in court on the basis that other violations of the covenants by others without action taken constitutes abandonment of the agreement.

* For further information, contact the General Consel's office of the ARRL, 225 Main St, Newington, CT 06111.

See also the file ANTS-INDOOR on the ARRL e-mail server.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a complete list. There are also books on the subject available from ARRL.
* If cable TV is an underground feed, look for central distribution box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is disconnected and you use rabbit ears instead. It could be the cable company's problem!
* Calling the cable company may get results, since they are also responsible for RF leakage from their equipment. However, they are very often obstinate. Good luck! Try some or all of these suggestions before calling the cable company:
1. Log the interference, noting geographical location, frequency, and characteristics.
2. Bring it to the cable company's attention in writing, preferably addressed to "Chief Engineer", or "Technical Staff".
3. Don't be accusatory, instead ask for assistance in resolving the problem. Try to work it out with someone technically knowledgeable.
4. Do mention your "licensed radio system", but try not to be too specific about "ham" or "CB" unless requested.
* Try moving the radio antenna further away from the TV sets. Make sure the SWR is LOW.

See also the series of files on the ARRL e-mail server on various aspects of electromagnetic interference. The filenames start with "EMI-" like EMI-CATVI (cable TV), EMI-GEN (general notes on EMI), EMI-AUDIO (interference to audio devices), etc.

** Did you know that you can get college credit for being a ham?
It's true! You can receive up to 14 credits in electronics and engineering thru placement tests for CLEP (College Level Entrance Placement) exams and DANTES (Defense Activity for Non-Traditional Educational Support) exams if you have an Advanced or Extra class Amateur license. For more information, ask your campus education office or (for DANTES) your military education office.

** On what frequencies do JPL and GSFC retransmit the shuttle audio?
[see also rec.radio.amateur.space]
Station VHF 10m 15m 20m 40m 80m Video
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860

KA9SZX 146.88 426.25
K4GCC 146.94
WA4VME 145.17
W6TRW 145.32

All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on
40-80m.
WA3NAN - NASA Goddard Space Flight Center (GSFC), Greenbelt, MD
W6VIO - NASA Jet Propulsion Laboratory (JPL), Pasadena, CA
K6MF - NASA Ames Research Center (ARC), Moffett Field, CA
W5RRR - NASA Johnson Space Center, Houston, TX
W6FXN - Los Angeles, CA
KA9SZX - Champaign-Urbana, IL
K4GCC - Titusville, FL (near or at Kennedy Space Center)
WA4VME - Melbourne, FL (near or at Kennedy Space Center)
W6TRW - TRW ARC, Redondo Beach, CA (shuttle audio may be overridden
by repeater usage)

** Can I take my HT on an airplane and operate it if I get the permission
of the captain?
Technically, maybe. But don't count on it. In general, you can't use
a radio or scanner on an airline (or charter) *unless* the airline
allows it and the pilot-in-command (PIC) determines that it will not
interfere with the instruments and radios on that specific aircraft.
Very few US airlines allow passengers to use radios so be ready to
disconnect the antenna when you ask. (Don't even ask to transmit.)
For reference (in the US) the pertinent portion of the Federal Aviation
Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the
HT (or any electronic equipment) onto the airplane. Generally, you
can appease the security guards, simply by showing that the unit is
operational and doesn't have a bomb inside. For a radio, just turning
it on and opening the squelch satisfies them. Expect more difficulty
during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you
have the permission of the PIC. It is still possible for the radio to
interfere with the plane's navigation or communication equipment, so
be sure to ask first. Always obey the requests of the PIC. He knows
his airplane and radios better than you do.

** How do I modify my current Amateur license?
To modify your license (change of address, change of station location,
change of name, renewal, or even change of callsign), submit an FCC
Form 610 to the FCC. Forms are available from the FCC or ARRL or a
local VE session or ham radio store. Do NOT use a photocopy. Check
off the appropriate boxes, fill in the new/changed information, SIGN
THE FORM, and attach a copy of your current license (or a brief letter
of explanation for its absence, ie, "my dog ate it"). NOTE: If you

check the box to change your callsign, YOU WILL GET A NEW CALLSIGN, even if all you wanted was to supply a new address; if you want to keep your callsign, DON'T CHECK THAT BOX. Send the form to FCC, POB 1020, Gettysburg, PA 17326. Turnaround time (for CURRENT licensees only) is about 2-4 weeks.

ANY ham can apply for a new callsign (this is different from the past where you can only get a new callsign if you move or upgrade). You can't specify WHICH ONE you want, a new one comes from the same pool as new licensees for that class of license. The callsign is based on your mailing address. For overseas military and civilians, be sure to specify a station location that is within FCC jurisdiction.

New licenses are for 10-year terms. If you apply for renewal before its expiration date, the expired license is valid for 60 days after expiration to allow for the new license to arrive. You have up to 2 years after expiration (5 years for an old 5-year license) to renew before re-examination is required (but you can't operate with an expired license). You will lose your current callsign after 1 year after expiration if you don't renew.

For more information on FCC Form 610, see the file FCC-610-INFO on the ARRL e-mail server. (See Part 2 for details.)

** I'm confused about XXX, should I ask the FCC?
[see also rec.radio.amateur.policy]
Whatever "XXX" is in this case, the overwhelming ARRL and net opinion is a resounding "NO!", at least not as a first step. Amateurs are generally very law-abiding people and have historically written the FCC asking for clarification on some operating practice or another. This is a very dangerous practice, for several reasons.

Most amateur radio regulations (contained in Part 97) are generally very loosely-worded, so as not to restrict experimentation and new techniques. But asking the FCC for a clarification will set in motion the process of "clarifying" it for everyone (i.e. new rulemaking.)

Examples of such restrictive rulings include varying topics like when Hams can help non-profit agencies or effectively forcing packet BBS sysops to screen messages before forwarding them. They were the result of well-intentioned questions by Hams that forced the FCC to make a ruling where they previously allowed the amateur radio community to police itself.

Under all circumstances, it is better to first read the rules yourself. Then, if there's a problem, ask your national amateur radio organization (such as the ARRL in the US) which can give qualified advice about interpretation of FCC regulations. Organizations like the ARRL also have the influence to ask the FCC informally, without forcing a ruling.

Even if asking the FCC doesn't result in a restrictive ruling, it is generally a good idea to not overburden an under-staffed and under-funded government agency with a lot of correspondence. The Amateur

Radio Service has traditionally been a low-workload "hands-off" service, and has enjoyed a wide latitude from the FCC. Please don't ruin this image for your fellow amateurs.

For more discussion on how and when to contact the FCC, see the file FCC-CONTACTING on the ARRL e-mail server. (See Part 2 for details.)

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 - old radios, TVs, ham equipment, 40s and 50s radios, telegraph, books, etc.
Hallicrafter Service manuals: Ardco Electronics, PO Box 95, Dept Q, Berwyn, IL 60402
Antique Wireless Association, Bruce Kelley, W2ICE, Route 3, Holcomb, NY 14469 - sponsors the Wireless Museum

** Where can I buy vacuum tubes?
Kirby, 298 West Carmel Drive, Carmel, IN 46032 (1-317-843-2212)
Antique Electronic Supply, Box 1810, Tempe, AZ 85281 (1-602-894-9503)
Fair Radio Sales, Box 1105, Lima OH 45802
Fala Electronics, Box 1376-1 Milwaukee, WI 53201
Southern Radio Supply, 1909 Tulane Ave, New Orleans, LA 70112 (10504-524-2343)

See also the file VACUUM-TUBES on the ARRL e-mail server. (See Part 2)

** What do I need to get started in packet radio?
[see also rec.radio.amateur.digital.misc]
Packet radio is a digital form of communication using radios. There are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use packet radio, you'll need a radio (2 meters and 70 centimeters are most popular), a box that converts radio signals to digital signals that a computer can understand (called a TNC or terminal node controller) and a computer or terminal. For some computers or TNCs you may need special software as well. However, most TNCs and computers get along quite well with just a terminal emulator software package. Most personal computers can be interfaced to use with packet radio. Since there are many digipeaters, generally even an HT will work with packet radio.

Your first source of information on Packet Radio should be the rec.radio.amateur.digital.misc newsgroup. It has its own regularly-posted FAQ that goes into much more depth on the subject than this one can. See also the mailing list and archives info in Part 2.

For more information on packet radio, you might try TAPR (Tucson Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).

See also the files PACKET-INTRO, PACKET-NEW, and PACKET-GLOSSARY on the ARRL e-mail server or the directory /hamradio/packet on the KA6ETB e-mail HAM-server. (See Part 2.)

** What do I need to get started in satellite communications?
[see also rec.radio.amateur.space]
For more information about Amateur Satellite Communications, try AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington, DC 20044 (301-589-6062). They also have an international net on Sundays on 14.282 MHz at 1900Z.

ARRL publishes a book on this subject: The Satellite Experimenter's Handbook. Ham Radio stores in your area may either have it or be able to order it. Or you can order it direct from ARRL.

See also the contents of the directory /hamradio/satelite on the KA6ETB e-mail HAM-server. The ARRL e-mail server has a bibliography on satellite materials in the file SATELLITES-B.

** What is available to get started in ATV, SSTV and WEFAX?
This is a large subject area in itself. Amateur Television (ATV), Slow-scan TV (SSTV), and Weather FAX (WEFAX) all deal with transmitted pictures. (ATV includes moving pictures and audio just like your household TV.)

Equipment is available to interface to most common microcomputers including PC clones, Amigas (which are prominent in most video applications anyway), Atari ST, and others. (At last check, we didn't see Macintosh on the list.) There are also a handful of publications on the subject.

All this information is available via FTP in the /pub/ham-radio directory at ftp.cs.buffalo.edu. (See Part 2 for more information on FTP.) The file called sstv_wefax_info is maintained by John Langner WB2OSZ (johnl@avs.com).

The ARRL e-mail server contains an introduction to SSTV in the file SSTV-INFO. (See Part 2 for more information on the ARRL e-mail server.) There is a bibliography of ATV articles from QST in the file TV-B. (See Part 2 for details.)

The KA6ETB e-mail HAM-server has files on SSTV and WEFAX in the directory /hamradio/sstvfax.

Another resource is the regularly-posted UseNet Elmers Directory. The list contains a volunteer Elmer who can help with ATV, SSTV, and WEFAX questions.

** What are these contests I sometimes hear, and how do I participate?
Dozens of contests are held each year, usually at weekends, and can provide useful operating experience. They typically last for 24 or 48 hrs, and are usually on SSB or CW only (the Russian CQ-Mir contest is on both modes at the same time). You can participate by making one QSO or several thousands. In most contests you send a signal report (traditionally 59 or 599) followed by a number that is different for different contests - the most common one is a serial number (so you send 599 001 for your first QSO, then 599 002 etc). The exchange may, however, be your age (All Asian contests), your CQ or ITU zone (CQWW

and IARU contests, respectively), your state (ARRL contests) or something else. Read "Contest Corral" in QST for the rules for all major contests - the more serious contester may wish to subscribe to the National Contest Journal, or join the e-mail contest mailing group (write to Trey, WN4KKN, at garlough@tgv.com). Knowing the rules can prevent embarrassment - you will get a cool reception if you are a W or VE and call a W/VE in the ARRL contests, since they can only work non-W/VE stations. Otherwise, QSOs made in contests are just as valid for DXCC (DX Century Club - more than 100 contacts), WAS (worked all states) and other awards as are 30-minute ragchews. Although not strictly a contest, the annual Field Day provides very useful operating experience under less than optimal conditions and is highly recommended for new operators - check with your local club for their Field Day plans some weeks before the (late June) event.

For more information on contests, the ARRL e-mail server has the following files: CONTESTS-93 (as of this writing, substitute current year), CONTEST-LOGS (for contest log formats), FORM-10M (10m contest entry form), FORM-VHF (VHF contest entry form), and others.

: dish receiver, or other devices designed to receive telecommunication
: signals, [...]

: Pardon me, but I thought this wasn't legal? Can someone post, email or
: point me to relevant legal precedent which makes the clause invalid?

The FCC's PRB-1 only applies to restrictions imposed by government agencies. You are free to voluntarily enter into a private contract that puts restrictions on you, so it is a perfectly legal and enforcable contract, unless you live in Georgia.

The Georgia legislature recently recognized that people often don't have a real choice about accepting deed restrictions, and passed a law which prohibits restrictions against Amateur Radio antennae, even in private covenants. I don't know if the law has taken effect yet, or any other details...

I guess you probably aren't buying a house in Georgia. Oh well.

You might try talking to your prospective neighbors and see how they feel about outdoor antennas. If they don't object you will probably have better luck with the review board. In particular, a not-too-obvious dipole is not very objectionable -- I have one in the yard now, despite a similar prohibition. It is almost invisible (well, it helps that it is in a oak tree big enough to completely contain a full size 20-meter dipole -- and possibly a 40 if I wanted to try!). Good luck!

House builders will only rethink these lovely clauses when they see people walking away from what they thought were sales because of them, and realise that it's hitting them in the pocket.

If amateurs would only visit the occasional new housing tract and invest a few hours in acting like a well heeled punter, and then walk out because of the clauses..... Expressing interest in all the expensive options helps - builders make particularly high profits on the optional bits.....

I once bought a car with real, live cash. I took along a few percent less than they would probably accept, in a cardboard box. Took it out, wad at a time, counting it. Oh dear! not quite enough, I'll either have to save a little more, or go for the other brand. The salesman's nerve just wasn't up to the sight of the money going BACK into the box.

House builders don't really care about these clauses, they just think that they help sales in some circumstances, all we have to do is highlight that they also lose sales in some circumstances and we can reverse the trend.

So how are things going, Mike ?

Cheers
David GM4ZNX

AM also suffers much from ignition noise, generated by cars, which makes
mobile comms very difficult.

I am about to apply for a restricted (ie, no code) licence from my local authority - I've already passed the necessarry examinations.

With the restricted licence, I'll have the following limitations :

A restricted class license permits the licencee to operate on VHF bands allocated to the Amateur Service. The station shall transmit on F3E or A3E, and is limited to a maximum RF output of 10 Watts (erp).

If the rig can do 'more' than that, it has to be modified to conform 8(. If it can operate on other bands, they might jolly well have to be disabled too.

Besides all this, I'm interested in knowing more about 2m rigs (or handhelds). Could someone tell me where I can find out more about them, perhaps grab a few brochures too. Perhaps some reviews would be good

As this is going to be my first rig, I'd appericate a couple of pointers on what I should look out for when buying a new rig. Also, what kind of antenna should I use with VHF equiptment...

Hopefully soon-to-be-ham

PS: Where I come from, we have to get approval for what equiptment to purchase _first_, next purchase it, then get it tested/approved, finally do we then get our license - of course, the revelant examinations have to be

jeff, you need to stay up to date. after march of this year, the FCC would only accept the new form 610s. i had to destroy the old forms after the exams we had in February so they wouldn't get mixed in with the new forms.

if you send in a renewal with an old form, you get the application back in about 2 months with a new application form attached that you fill out and send in again and wait another 2 months.

the 610 you should be using should have section 1 at the top of the page, with a big area for the check off of what the application is for, section 2 with the VE signature blocks are at the bottom and section 3 for the medical waiver is on the back. no "checkerboard" area with boxes to record credits and dates issued and all that.

you can flush the rest (unless you have a museum or some other collection of old government forms).

I have a PK232 using Packratt software. I can not find a default where I can have "break-in" in the CW mode. No trouble with it in terminal mode, but using the software doesn't seem to allow one to use a break-in method. I have to type the characters then hit either space or return to set it to send the CW.

Any help would be greatly appreciated.

Thanks,

4459. Repeater Help - Cary IL. area

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-22 14:24:25 UTC
From: thweatt@rtsg.mot.com
Message-ID: <thweatt.780243865@mustang3>
Source record: 259822

I really need help. I have recently purchased a radio and
don't really know what I am doing. It seems like I have
a basic understanding of using a repeater; but, am not having
any success. A friend gave me a copy of a repeater guide and
I think I understand how to use it but could not even once access
the repeater. I spent a whole battery before I even got one contact.
Also I hear people talking but I am always afraid to jump in and don't
really know how to jump in without steping on someones toes.

Example:

In this book it stated that a repeater was location was Crystal Lake, IL.
The frequency was Output 146.055 with input +600KHz. So I set up my YT-470
to listen on 146.055 and transmitted on 146.655. Also I forgot that it has
a CTCSS of 107.2 so I think I set up my CTCSS for 107.2. I listen to 146.055
on my other radio to see if I could hear me transmit; but, I did not hear a
thing. I would really like to start talking to someone. The radio can
transmit since I have hear me transmit using simplex on a frequency and
listening with my other radio; however, the radios were in the same room.

Could someone help me with this???? I live in Cary, IL and Crystal Lake is
only about 10 miles max from me. It might be possible that I was transmitting
at to low of wattage (about 2 watts I think). If anyone lives in this area
please email me since I would like to talk with you about local repeaters.

Also email me if you have any help for me at:

thweatt@cig.mot.com
Thanks,
John

4460. Re: Learning CW [long]

Source record: 259760

Gang,

OK, I don't have any time on my hands, but where there's
a will....

Do not repost this to the internet. You will be flamed
if you do because of the length and you don't want that.

Also, let's not use up bandwidth for flamewars etc., just
email to me direct and do not, i repeat, do not post your
values to this group. I'm sure they are not interested
at this time and we both will get flamed big time. I'm
going to take enough flak as it is. :-) If you don't
know how to use your mailer on your system, then print
this off and mail to me at the address listed within.

I'll write "the" book on CW, but I need some help. Your
help in fact. I'll credit everyone who contributes and
I don't think you'll get a free copy of the book, but I'll
try. This is going to be dependent upon the publisher.
Obviously you'll need to write a chapter or more to be
considered. Give me your resume if you want that much
attention and I think you don't. :-) I'll take no
royalities from the publisher for this work except to
cover out of pocket expenses such as postage and phone
charges.

I'll do a FAQ if it hasn't already been done for just CW.

Here's the idea. Book plus 3 CDs. Book has study guide,
history of CW, world record holders, answers to the disks,
Phillips-Adams chart for abbreviations, QSO formats and variations,
and there will be several tests on the disks that if you
copy and send in you get a certificate (but the ARRL already
does this) along with tables of freqs and schedules for all the on
the air practice you can find. Book will be typeset using
LaTeX and 1200 dpi printer. Audio will be produced at
44.1K for CDs and 48K for DAT using DSP in a workstation with 2.5mS
rise and fall times shaped to reduce or prevent "thumps"
on make and break with no (absolutely no) background
hiss, no crosstalk, and all that other crude you hear
in other media. Variation in tone frequency to break
the monotony.

The CDs will have 6 hours of practice and tests using one
channel of the stereo pair, thus the double time. I think

that someone makes a cheap switch for attaching stereo headphones
and getting one channel, R or L, out. I think this critter is used
for books on tape (no wonder illiteracy is at an all time high).
:-) Anyway, saves time and money. I'll send note to Wayne
Green (CD wizard?) and see if he can give us a deal on CDs. :-)
I know that we're talking about some serious money here in
range of $50 or so for the whole kit and kaboodle (sp), but
education is expensive no matter how you get it - K5FO.

I can generate perfect CW at ANY speed. We'll shoot for Farnsworth
spacing until 15 wpm and then it's regular code from there on up
to 40 wpm. Then if there is enough interest to finance the project
then we'll try for 60 wpm on another disk.

Section of code samples for contest operations
1. SS
2. FD
3. CQWW
4. DX tests
5. Cracking a pileup for calls.

Some one give me the history of Farnsworth. I have a reel-to-reel
tape more than 25 years old that uses it, but it wasn't called
anything back then. Did Farnsworth come along after that? I don't
have a date for same.

I'll take email listings of all books and materials that you
personally own related to CW operation and/or learning. Anything
that will help or that I may not have in my library.

This whole project may flop due to the anti-code backlash and
a lot of bad attitudes about code in general, but
what the hell. Let's go for it. No flames please. This is a
project, not a policy making decision. :-) Take that to
rec.*.*.policy or whatever it's called.

Here's some statistics that I need for testing a couple of
theories. Please fill in the following table (don't return
this text, I've already read it) and email to me. The USPS
is too slow. But if you just gotta, Chuck Adams, Box 181150,
Dallas, TX 75218 (not the callbook address please).

If you are a newbie and about to learn the code, how are you
going to go about it? If you know some code or all of it, fill
out the following and email to adams@sgi.com.

<optional survey follows> Please be honest with me and
yourself. I'd like this to be serious work. All data
will be confidential except the tally and interesting
points and comments may be made public without releasing
source of info unless permission granted or needed.

Name:

Call (if any):
internet email address:

Do you know the code?
How long have you known the code?
What is your current code speed? Listen to ARRL practice
session if you are not sure and see what it is.
Your age, if you don't mind me asking:

How did you learn the code? Sight or sound? Tapes, on the air
listening, computer generated, ... ? What books and who's
materials did you use? ARRL? W5YI? Gordon West? Other(s)?

Did you learn using Farnsworth spacing? This will test if
there is a bias in the technique (maybe).

Do you know how long it took you to memorize the characters?
and numbers? and punctuation? and prosigns?
How long did it take you (approximately) and how much
practice per week to get to 5wpm?
How long did it take you to get to 13wpm?
How long did it take you to get to 20wpm?
Make a table if you want for the above information.
Tell me about layoff times if you had them.

Guess at how much time per week you spent during these
periods and how that time was spent, i.e. did you get
a license and then get on the air?

Are you think you are stuck at some speed and what is that speed?
Do you think you count dits and dahs for numbers?

Do you use pencil or pen when writing to paper?
Do you print or write when writing to paper?
Do you use a typewriter? If so, what is you max typing speed?

How do you think you translate from sound to characters?
Is this process automatic or do you have to really concentrate?

Do you know at what speed in wpm you read a newspaper?

Do you use CW at all or part time now?

I may have left something important out, but hey, that's life.

tnx es gl

There was an article in the Dec 15, 1993 WESTLINK REPORT (front cover) that tells of a ham who put a repeater on 147.49 MHz, caused interference to a simplex net, and received a notice from the FCC that the operation of a non-coordinated repeater may not cause interference to other amateur operators. The notice said that Section 97.205 states that an uncoordinated repeater does not have the same right to use of the band as simplex operators or coordinated repeaters. The notice also warned that failure to comply could result in loss of license.

If someone puts a repeater in the simplex band, I'd say the odds are it is not coordinated :-).

Gee, Wayne Greene is right, those ARRL guys really are out of touch with reality! Anybody know what an ARRL "Vice Director" does. I figure he's either gotta police it or provide it.

You know, I thought Wayne was being too hard on the ARRL until I joined it two months ago. You get a free book when you join. I picked the repeater directory because mine was a '91 model. I had been seeing the '95 edition in the stores, in the magazines (including QST), and at hamfests. Imagine my surprise when my "new" book arrived and it was a '94 version! Now we know how the ARRL gets rid of all those outdated license manuals, they give them as "freebies" to newcommers!

Mike,
Perhaps they were aware that you are prone to swearing on the bandwidth
given to you and decided not to issue you a license. Lighten up, you get
what you pay for. If you wanted it sooner, you should have taken the
test earlier. I'm just happy that they lightened up the requirements
from what they were ten years ago. We have a pretty decent hobby/adventure
ahead of us, let's not mess it up.

Thanks,

And, unfortunately, when I checked with my local RS store they said "you want what????" They checked the computer and it wasn't even there. So they said "Well, this is the 1995 catalog so I guess it won't be available until 1995" or something along those lines. The sales person was new and the manager wasn't around so that may not be the whole story but they don't appear to be regularly available right now.

Jeffrey Herman (jeffrey@kahuna.tmc.edu) wrote:

: Then why did the land-mobile services (which started our using AM)
: switch to FM?
: Jeff NH6IL

Aircraft do tend to travel further afield. Changing over would involve changing an airport and all the aircraft using it simultaneously. These aircraft use other airports, so those must also change at the same time - and so on. In this way the whole world (except the odd reclusive country) would have to change over at once.

The capture effect is a discouragement, but on the other hand, much aviation radio is of very poor audio quality and various incidents have been attributed to this. There have been studies into changing to improve speech clarity, but the inability to do a phased changeover has always killed it.

Land mobile has been historically broken into small, isolated groups, so a group could buy new FM gear when it wanted. Channel spacings weren't affected. Joe's taxis could change quite independantly of the fire brigade etc as the two systems are isolated.

Maritime VHF is FM because they used HF mainly, and only started later on VHF, after FM was proven. Aircraft went for VHF early because of the benefit of smaller antennae.

In the aviation world, dates have already been set for the shut-down of ILS systems, a few years after the date set for the installation of MLS. I wonder if some of the GPS based alternatives might throw a spanner in the works ?

Cheers

Nice program! One question though (maybe I'm dense or something):
Which part of the 300 ohm line does the center conductor of the
coax attach to, the part with the 1/4" gap or the other side, or
does it matter?
Tnx.

> Good luck, and enjoy your new toy!

I just installed a Yaesu 5100 in my wife's Subaru. I mounted it where the CD player would have gone. I find that the sound from the internal speaker is just fine. Routed the power cable through the brake pedal to master cylinder hole (ample room, no problem with rubbing). Check around, you may find some unused plugs in the firewall or can easilly pass it through with an exhisting item, like the air cond. drip line you mentioned.

I used a Larsen Glass mount antenna (KG 2/70 PL) and am quite impressed with it. SWR on 2 meters is 1.1:1 and the worse I found was 1.3:1 on 70 cm at max power (35 watts). I was able to hit a repeater 30 + miles away

with my HT connected to this antenna and the cigarette lighter for power. This antenna also solved the mounting and wiring problem, since the wires are already inside the car and no holes needed to be drilled into the body. All in all I am really pleased with this antenna. Others may not be keen on glass mounts and your mileage may vary, but its' worked well for me.

My friend also has this same antenna on a Mustang hatchback. The antenna is mounted on the rear glass (hatch) and works well for him also. I also have a Mustang hatchback and will use the same antenna for it also.

I would reconsider the glass mount and mount it on the hatch. Mounting it on a stationary side window would not be bad, but you need to keep the coil up above the roof so as not to couple with the car body. The Subaru has the antenna mounted at the bottom of the window (should be at the top, but would not clear the garage and I do not want to remove it all the time). The coil still clears the roof and like I said it works fine. If it didn't, I would have gotten the reinstall kit and put it on the top portion of the window.

Have fun and good luck with whatever you choose.

Regards
Ken

Hello Victor. QSL bureaus don't do things in a hurry. The Sterling Park (Call District 4 with 2 letter prefix) guys do not do periotic mailings. If you put a single 29 cent stamp on each envelope, they will put 8 to 14 cards in there before mailing. If you send, say, 50 cards per month through the outgoing bureau, your first envelope should show up in about 9 months. Subsequent envelopes about once a month.

If you put on 2 stamps, it will easily be a year and a half before you get the first one back. If you work more DX than that, of course they will come back faster.

This is based only on my experience. Anyone else find anything different?

To all radio amateurs

SB SPCL ARL ARLX026
ARLX026 A special ITU station

A special ITU station

Special event station 8N3ITU is operating from the International
Telecommunication Union 14th Plenipotentiary Conference. The
station is set up at the International Congress Center in Kyoto,
Japan, site of the conference.

ITU officials attending the conference who are licensed amateurs are
allowed to operate the station. Japanese amateurs watch over the
station and assist visiting amateurs. The station's sponsor, the
Japan Amateur Radio League, asks operators to avoid ''piling up'' on
8N3ITU.

The operators also hope to have a station on amateur satellites,
possibly AO-13.

The conference is scheduled to run until October 14. QSLs may be
sent via the JARL bureau, or direct with an SASE to 8N3ITU,
JARL-Kansai, 3-8-31 Daidou, Tennouji, Osaka 543, Japan.

ARRL Bulletin 74 ARLB074
From ARRL Headquarters
Newington CT September 22, 1994
To all radio amateurs

SB QST ARL ARLB074
ARLB074 A new FCC service

A new FCC service

The FCC has instituted a toll-free phone line at its Gettysburg,
Pennsylvania licensing division for customer service inquiries.
Amateurs may call 800-322-1117 weekdays between 8 AM and 4:30 PM
Eastern Time to access an automated information system with recorded
messages on interference complaints, form requests, records, and
Amateur Radio call sign assignments.

Other messages regard fee information and processing times. A
TouchTone telephone is required.

The FCC said the new service was part of its response to a
presidential order that the federal government be ''customer driven.''
The FCC said it used a series of focus groups with external
customers to identify the desire for an 800 number at its licensing
division.

''Within the next 18 months,'' the FCC said, ''customer service
standards will be developed for other areas of Commission operations
to ensure that FCC customers receive the highest quality of service
possible. As these new standards become available, the FCC will
inform its customers.''

>73, Jeff. (yet another one)

The info sheet that I received a long time ago from the Sterling Park bureau recommends that you place one 29 cent stamp on each envelope and, if you expect a lot of cards, to staple additional postage (19 cent stamps) to the last envelope. That way, if you don't get many cards, the envelope will go out once they fill up one ounce worth of postage. If indeed you receive a lot of cards (as I occasionally do), then the manager can add additional postage as warranted, rather than sending 3 or 4 enveloped back at once.

Good morning. It's Sunday the 25th of September and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

First the headlines:-

The new Young Amateur of the Year is Robert Aley, G7SRR,

Amateur radio is being demonstrated at Earls Court

and fifteen should be open for next weekend's RSGB 21/28MHz Contest.

The 1994 Young Amateur of the Year is seventeen-year-old Robert Aley, G7SRR, who was selected from a list of nominees after interviews at RSGB HQ held by the Radio Society of Great Britain and the Radiocommunications Agency. Robert, who was first licensed as 2E1AXZ, enjoys participating in special event stations, construction, packet radio, designing his own QSL cards and helping the Amiga Amateur Radio User Group. Remarkably, Robert has been an RSGB Novice Instructor since September 1993 and has recruited several more Instructors. In July this year he received his Full Licence and has already booked a date for his 12 words per minute Morse test. Interestingly his examination fee was earned by writing questions for the Novice RAE which were accepted by the City and Guilds.

The runner up is Stephen Conner, GM0TET. He gained his first Novice licence, 2M1ARO, in July 1992 and after passing his 12 WPM Morse test in October became 2M0ADS. In December he gained a double-distinction in the RAE and became GM0TET. Stephen's activities have included construction, operating the club station for most of a 6 metre contest, helping to teach a Novice course, and repairing converted PMR radios for other club members .

A number of prizes donated by the RSGB, the RA and Industry will be presented to Robert and Stephen at a ceremony held at the RSGB HF Convention on the 9th of October.

Today, Sunday the 25th, is your last chance to visit LIVE '94, the huge consumer electronics show being held at London's Earls Court. This year the RSGB has coordinated an 'Amateur Radio Village' in conjunction with seven other companies, featuring all aspects of amateur radio.

LIVE '94 covers a wide range of activities including music, broadcasting, computers and photography. The Society's aim at the show is to introduce the hobby to as many people as possible and well over a hundred thousand visitors are expected to attended the six-day event.

GB3RS and GB2VHF have made many contacts from Earl's Court. Details of LIVE '94 can be found in the September RadCom, pages 26 and 88.

An RSGB Regional Meeting takes place on Saturday the 22nd of October in Bristol. The doors open at 12.30pm, when light refreshments will be available, and the meeting commences at 2pm. Members of the RSGB Council will be in attendance plus representatives of HQ. Full details appear in the October edition of RadCom which was posted to all RSGB members at the end of last week.

The next RSGB Microwave Round Table meeting takes place on Sunday the 13th of November at the British Telecom Laboratories, Ipswich, Suffolk. The event is organised by the Martlesham Radio Society and will commence at 10am. Attractions will include the usual round table sessions, test equipment and bring and buy facilities. The provisional lecture programme includes talks on 10GHz rainscatter, 24GHz and 47GHz activity, as well as an update on the 10GHz Phase 3D transponder by Freddie, ON6UG. For security reasons, all access is by advanced booking only, and it is important to give the names of all persons attending in a group if you request multiple tickets. Tickets can be obtained by sending a Self Addressed Stamped Envelope to Roy Smith, G0RRC, 'Lykkebo', The Street, Burstall, Ipswich, IP8 3DN.

A new RSGB Liaison Officer (RLO) has been appointed for the Shetland Isles. He is Robert G Miles, GM4CAQ, and his address is 58 Fogralea, Lerwick, Shetland Isles ZE1 0SE. RLOs hold a wide range of information and they are available to help any RSGB member seeking advice.

A new RSGB Liaison Officer (RLO) has been appointed for Durham. He is John Deamer, G4SJY, and his address is 28 Brackendale Road, Belmont, Durham DH1 2AB. His telephone number is 091 384 8313. RLOs hold a wide range of information and they are available to help any RSGB member seeking advice.

The British Young Ladies Amateur Radio Association (BYLARA) now has a new secretary. She is Mrs Maureen Ritson, G7FYV and her address is 14 Dunsdale Road, Holywell, Whitley Bay, Tyne and Wear NE25 0NG.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Angola, SM7DZZ will be active as D2ZZ from now until Sunday the 2nd of October.

From Bermuda, K1EFI will sign K1EFI/VP9 from now until Tuesday the 4th of October. Operation will be on all bands, mainly CW.

And from Greece, N1JAC will be active as N1JAC/SV2 from now until Wednesday the 28th of September, including the multi-operator participation in the CQ World Wide RTTY contest this weekend.

Now the rallies we know of for today, Sunday the 25th of September:

The Harlow Amateur Radio and Computer Show is being held at the Harlow Sports Centre. There is easy access off the M11 motorway at junction 7, the A414, and other routes are signposted. Doors open 10.30am. This year's event has extra floor space and more entrances will be used. The event features many trade stands and a bring and buy area. Full catering and lounge bar facilities are available in the complex. Talk-in is on S22 and SU22 by G6UT.

The Three Counties Rally is being held at the Three Counties Show Ground, Malvern. Doors open at 10.30am. The event features a large selection of trade stands, covering radio and computer, a bring and buy stall and four lecture periods on amateur radio topics. Refreshments are available.

The North Wakefield Radio Club Rally is being held at the Outwood Grange School, Potovens Lane, Outwood, Wakefield, located just one mile from the M1 and the M62. The event features trade stands covering radio and computer interests, local radio groups, a Novice stand and a bring and buy stall. RSGB Morse Tests will be available on demand, subject to the usual fee and the need to bring two passport size photographs.

The SDX Cluster Support Group (GB7SDX) Junk Sale is being held at the Community Centre, Maryhill Road, Glasgow. There are facilities for disabled and also ample car parking space. Doors open at 11am. The tea rooms are open to provide hot/cold drinks and also light snacks. Talk-in is on two metres, channel S22.

Finally, a reminder that the Peterborough Radio and Electronics Society, East of England Rally which was to have taken place today, Sunday the 25th, has been cancelled.

Next the two events we know of for next Sunday the 2nd of October:

The Blackwood and District Amateur Radio Society Rally is to be held at the Community College, Oakdale, near Blackwood, Gwent. Doors open at 10.30am. The event features many trade stands and a bring and buy stall with a 'one pound per item or job-lot' fee and raffles. Talk-in will be on 2 metres, channel S22. For further details contact Norman, GW0MAW on 01495 227550.

The Great Lumley Radio Rally is to be held at Great Lumley, near Chester-le-Street, County Durham. Doors open at 11am, or 10.30 for disabled visitors. The event features a varied selection of trade stands and a bring and buy stall. Refreshments will be available. Children under 14 accompanied by an adult will be admitted free. Further details from Barry, G1JDP on 0191 388 5936.

Now a date for your diary:

The RSGB International HF and IOTA Convention is to be held from Friday the 7th until Sunday the 9th of October, at the Beaumont Conference Centre, near Windsor. Full details, including late booking information, can be found on page 57 of September's edition of Radio Communication, or can be obtained by calling 01442 62929.

Now for the HF contest news:

Firstly, the rules and dates for the RSGB QRS Cumulative Contests for September and October 1994 have not been published. Anyone requiring a copy of the rules should contact Chris Burbanks on 0115 937 6441 {Newsreaders: note that we will be introducing some of the new STD codes (see RadCom, Sept, p7) into GB2RS from this week. Nottingham has a new code 0115 but most will just contain an extra '1' and the codes really do work now}

The Scandinavian Activity SSB Contest lasts until 1800 today, on 3.5 to 28MHz, but not the WARC bands. Also the CQ World Wide RTTY DX Contest runs until 2400 today, Sunday the 25th, on the 3.5 to 28MHz, but not the WARC bands. See September RadCom page 18 for more information on both of these events.

The RSGB 21/28MHz SSB Contest takes place from 0700 to 1900 UTC next Sunday the 2nd of October. See June RadCom page 82 for full details.

Next some VHF contest news:

The RSGB 70MHz Trophy and SWL Contest takes place from 0900 to 1400 UTC today, Sunday the 25th. There are three sections: Single Operator Fixed, All Others and Listeners. See July Radcom page 82 for further details.

Another RSGB 10GHz Summer Cumulative Contest takes place from 0900 to 2100 UTC today, Sunday the 25th. See April's RadCom for details.

The RSGB 432MHz to 24GHz Contest tales place from 1400 UTC on Saturday the 1st, until 1400 on Sunday the 2nd of October. Concurrent with this, the IARU 432MHz to 24GHz Contest is also taking place.

Also the RSGB 1.3GHz Trophy and Listeners Contest and the 2.3GHz Trophy and Listeners Contest takes place from 1400 to 2200 UTC next Saturday the 1st of October. Full details appears in June RadCom page 83.

The WAB 50MHz Phone Contest takes place next Sunday the 2nd of October from 0900 to 1400 UTC. There are sections for Fixed, Portable, Mobile and Listener. Full details available from Gordon, G4SKQ whose address is correct in the RSGB Call Book, or via packet at GB7SYP.

The RSGB 144MHz CW Cumulative Contests will take place from 2030 to 2300 local time, on Friday the 14th and Monday the 31st of October. Use a 4422 summary sheet to show scores for each day, and the best three days will be totalled. Please send all logs plus a single 427 cover sheet for entry. Rule 10 applies. There are two sections; the first for single operator or portable entries, and the other for listeners. The Adjudicator is David Johnson, G4DHF, 65 West Street, Bourne, Lincolnshire PE10 9PA.

A special event station active this week is GB2EPF. It will be operated by members of the Grafton Radio Society during next Saturday the 3rd of October at the Police Sports Ground at Chigwell, Essex. Operation will be on HF and VHF on SSB, with Amateur Television on 23 centimetres and packet on 2 metres. Further details from Rod, on 0181 368 8154.

And now the solar factual data:

The period from the 12th to the 18th of September saw the quiet side of the sun coming into view, with all solar parameters declining. The spot count at Meudon was zero on the 16th. Every alternate solar rotation is now recording at least one zero. The daily sunspot indices meaned at 14 for the period. Solar flux levels declined from 77 units on the 12th, down to 70 by the 17th and averaged 73 units for the period. The 90 day average was 79 units on the 18th.

The geomagnetic Ap levels declined from just unsettled on the 12th to quiet levels of only 4 units by the 18th, giving an average of 9.2 units. The state has been 'nil nothing to report' throughout the period. The aa indices, as reported by the British Geological Survey for the period from the 6th to the 12th of September, averaged 37.1 nanoTeslas, about K3. The 7th was the most disturbed day with an index of 59.3 nanoTeslas and a period up to 101 nanoTeslas. There was no quiet period any day. The X-Ray flux has also declined from A4.1 units on the 12th down to only A1.0 by the 18th, giving an average of A1.6 units for the period. The electron fluence has declined from high levels on the 12th down to median levels through to the 18th.

I'll repeat the figures. Spots - 14; Flux - 73; Ap index - 9.2; X-ray flux - A1.6.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 12th to the 18th of September, averaged 6.5MHz. The darkness hour lows averaged 3.0MHz with very little variation day to day. Some blanketing E was reported on the 16th and 17th. Now that the seasonal changes are having an effect, the daytime highs are occurring around 19.00 hours, with the darkness hour lows around 05.00 hours.

I'll repeat the figures. Highs - 6.5MHz; lows - 3.0MHz.

No ionospheric data has been received this week from Ekaterinberg.

And lastly the solar forecast:

This week, the more active side of the sun will be rotating into view. Solar flux levels are expected to be about the 90s. The geomagnetic field is expected to be mainly at quiet levels. Daylight Ionospheric MUFs in the south are expected to be about 21MHz. Darkness hour levels are expected to be around 10MHz. The best paths will be north/south.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Golf and G7 Tango Sierra series, and Novice calls in the 2 0 Alpha India and 2 1 Delta Kilo series.

--

GB2RS is prepared by the Radio Society of Great Britain and is broadcast
in the 80m, 40m, 6m and 2m bands.

>than 1 part per billion.

Ahem, a factor of 10,000 missing here. It's 2 parts in
a million for the above example. But it's still a small
effect - 200 Hz at 100 MHz.

>Doppler isn't something you worry about for terrestrial objects.

Unless you have a radar gun pointed at you while
driving over the speed limit...

Why? You pick some unused band and simulcast AM on 118-136 MHz and FM on the other one using channel-pairing. That way, planes equipped with the new equpment can use it and people will the old stuff can continue to use that. Gradually (after 10 or 20 years, or whatever interval seems appropriate) you force the remaining few to switch over.

Not that I'm convinced this would be practical, but it's certainly possible.

> Price? I think it's $119.

I don't have the catalog in front of me, so I don't know what it says
exactly, so I'll take your word for it.

What is and does a helical filter do essentially? When I first saw it
in the catalog I noticed it did not have a switch to turn off the
pre-amp (like my Alinco brand HT amp does). On my amp, I have to turn
off the pre-amp when I'm in town because of the intermod.

Another HT amp on the market is the Ramsey 2m amp. That is $90 and is
a piece of junk. Mine up and stopped working after a few months. If
the helical filter does reduce intermod and the RS amp itself won't
bust up with the slightest provocation, then the extra $30 would be
worth it.

Greater than 2 MeV Electron Fluence for 21 SEP is: 2.0E+07

SYNOPSIS OF ACTIVITY

Solar activity continued at a very low level. The sun was
again void of spots during the period.

Solar activity forecast: solar activity should continue
at a very low level for the majority of the next three days.
On 24 Sep, old Region 7773 should begin to reappear at the

east limb. This region produced 2 M-class and 16 C-class
flares last rotation but is not expected to be as active
this rotation.

The geomagnetic field was quiet. Energetic electron
fluxes ranged between normal and high levels. It appears the
enhancement in these particles which began on 08 Sep is finally
beginning to wane.

Geophysical activity forecast: the geomagnetic field
should be quiet to slightly unsettled for the next three
days.

STD: A well placed transequatorial coronal hole may begin
elevating levels of geomagnetic activity slightly as early as
23 or 24 September. A full-disk x-ray image has been appended
below.

Event probabilities 22 sep-24 sep

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 22 sep-24 sep

A. Middle Latitudes
Active 15/10/10
Minor Storm 01/01/01
Major-Severe Storm 01/01/01

B. High Latitudes
Active 20/15/15
Minor Storm 05/01/01
Major-Severe Storm 01/01/01

HF propagation conditions were normal over all regions.
No changes are expected through 24 September inclusive.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

I called two different RS today and neither of them have heard of it (yes
I gave them the catalog number and page number in the 1995 catalog) although
they did try to pull it up on the computer. They said they have no idea
when it will be out since the warehouse doesn't even have it. They *hope*
it will be by Christmas since it should be a hot seller.

FYI,
David

ARLD058 DX news

ZCZC AE56
QST de W1AW
DX Bulletin 58 ARLD058
From ARRL Headquarters
Newington CT September 22, 1994
To all radio amateurs

SB DX ARL ARLD058
ARLD058 DX news

The items in this week's bulletin are courtesy of Tedd, KB8NW, Frank, AH0W/OH2LVG, Jukka, OH2BUA, Rick, BZ1QL, Sam, N3NFK, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network, and the Contest Corral column from QST. Thanks.

BELAU, MICRONESIA, and GUAM. Tosy, JA6VZB, will be active as KC6VW through September 26 from the QTH of KC6ZZ. He will be on all bands with CW, SSB and SSTV. Look for him in the CQ WW RTTY Contest this weekend. On September 26, 27 and 28 he will sign V63BM from Micronesia, operating primarily SSTV. He hopes to send underwater pictures taken on his trip. On the 28th and 29th, he plans to be active as AH0T/KH2 from Guam with CW, SSB, RTTY and SSTV. QSL via the bureau to JA6BSM.

SAO TOME. Charlie, S92SS, is now on 160 meters Fridays and Saturdays. Check out 1835 kHz around 0000z.

THE GAMBIA. Gary, C53HG, has been busy on 17 and 20 meter CW and SSB. On 17 meters try around 1330z and 2130z. On 20 meters try between 1830 and 2230z. QSL via W3HCW.

ALAND ISLANDS. The Sanoma Radio Club will be active this weekend in the Scandinavian Activity Contest SSB. Operators include OH2BUA, OH2ZA, OH2BEJ, OH2BAP and OH2BMY. They will be on 80, 40, 20, 15 and 10 meters. QSL via OH2EW.

DUTCH SAINT MAARTEN. PJ7/WA7LNW and PJ7/OH2LVG will be on the air during the last week of September on all bands, and with some RS12/13 work. Plans are to sign PJ8X in both the CQ WW RTTY contest and the Scandinavian Activity Contest SSB. QSL via KE7LZ.

CHINA. The Tsinghua University Amateur Radio Club will operate as BT45PRC on SSB, CW and RTTY from the end of September through all of

October. QSL via BY1QH.

PRINCIPALITY OF SEBORGA. Tom, DL8AAM, plans to be active for 5 days starting around September 25 as IK/DL8AAM/1P. This spartan operation will utilize a TS-50S and vertical.

PACIFIC DXPEDITION UPDATE. Teo, DJ1RL, and Harry, DL6NA, will now be on from Rarotonga, ZK1, October 19 to 22. Harry has received the call 3D2AN for the Fiji operation scheduled for October 17, 18 and 19.

CAYMAN ISLANDS. Dick, K2UFT, will sign ZF2SY from November 19 to 23. Operating will be between 0300 and 0600z, and again from 1000 to 1400z, primarily on CW. Dick will concentrate on 80 and 40 meters, and the WARC bands. QSL via K2UFT.

ZONE 2. Chris, VE2DR, of the Quebec HF Club, reports a schedule has been worked out for folks needing Zone 2 credit. No dates or call signs were mentioned, but check 3797 kHz at 0000z, 7070 kHz at 0100z and 14180 kHz at 0200z.

TAIWAN. Fritz, WD8E, will be sign BV/WD8E in late October. He will be on a business trip, so ham operations will be limited. QSL via WD8E.

CARIBBEAN DXPEDITION. Listen for Dieter, DL3KDV, as he travels through the Caribbean. Here is his itinerary. J6 from November 9 to 17, J8 from November 18 to December 1, and J7 from December 2 to 12. He plans to be on CW, SSB and RTTY on all bands.

INDIAN OCEAN TRIP. JA1ELY, JA1ETQ, JA1IDY, JA1OEM and JL1UXH are planning to activate 3B6, D68, FR, FH and 5R8. Operations are to take place between October 23 and November 20, with activity mainly on the WARC and low bands, using CW, SSB and RTTY. No QSL route has been announced.

THIS WEEKEND ON THE RADIO. The CQ World Wide RTTY Contest, sponsored by CQ Magazine and The RTTY Digital Journal, runs from 0000z September 24 to 2400z September 25. Exchange RST, state or province and CQ zone. For more info, check page 101 in August QST.

The Scandinavian Activity Contest, Washington State Salmon Run and 1994 Fall Classic Radio Exchange also take place this weekend. Check page 125 of September QST for details.

Here's my two cents:

I heard it was a matter of safety. If two fm radios key up at the same time, the stronger one usually prevails. If a third party was listening, he would not hear one of the other two transmitters. If AM is used, there will still be some hetrodyning, but the message may still be heard.

What do you think of that, netters?

James Holtzman kc6ncg (holtzman@shazam.ecs.csus.edu)

I had only one experience with them and it was OK. I needed a tektronix
491 service manual and they sold me a photocopy for $60. (later on, I found
a new one at a swap for $20)

|>
|>
|> Jeff NH6IL

It still has little to do with FM capture effect. It's purely economic.

How old is the average airplane? How old is the average car that uses land-mobile radio service? And how much $$ does an aircraft radio cost compared to one suitable for a car? And typically it's the government user that uses land-mobile radio services who can decide to spend the $$$ because it's only tax dollars they are spending, not their own personal dollars.

Cars are replaced every few years, and end-users of land-mobile (typically government/taxi/police/fire) buying cars/trucks can make that switch to new radio technolgies with little or no economic impact. Not so with airplanes. Airplanes are NOT replaced regularily, and thus there is a huge economic cost for someone to mandate that airplanes *will* switch to the imcompatible FM mode.

And it would have had to have been mandated for *everyone* to switch to FM due to the incompatibilities between AM and FM

There are too many AM radios in airplanes, and when there was shortlived talk of FM for airplanes, it was thorougly trounced by a broad spectrum of airplane drivers/owners/operators for purely economic issues.

SE> I may be moving to Wilmington, North Carolina. Does anybody have
SE> info on Packetcluster/BBS accessiblity in this area?
SE> Thanks & 73,
SE> Sean Kutzko KF9PL
Sean the Lan in Wilmington is on 145.690 and is KB4NOZ-3, the BBS is
KD4PSX-2. We also have a DXcluster is on 144.950 and the call is N4WI.
The SEDAN net is on 144.770 and the call is AD4DN-7. During the winter we
also have a gateway to 10 meg on 145.690, his call is N4WI-1.
Also the Cape Fear LL BBS has a LL to packet link.
Give me a shout when you get in the area.
73, Stanley / KC4DPC

: KE6MGW

Congrads Scott,
I love reading about people getting their licenses! I've been a
ham for 21 of my 34 years. When I passed my General from Novice in 1975,
I passed the test in May of 1975 and didn't get my ticket until October 1975.
Six stinking months, and it was hand typed! No instant upgrades either,
I had to wait for my WA1TNK ticket to replace my WN1TNK novice ticket.
Needless to say it was a VERY LONG SUMMER SITTING at the mailbox.

Got I feel like an old BUZZARD! :-)

Tom

4499. NICAD question

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-23 01:11:57 UTC
From: charnoft@wfu.edu
Message-ID: <35ta0t$deo@eis.wfunet.wfu.edu>
Source record: 259781

It is not a good idea to leave a nicad in a charger all the time anyway. For obscure chemical reasons I'm not familiar with, the battery should be charged and then drained before recharging. Don't top off a battery that has only been partly used if you don't have to; it should be fully cycled.
I have often questioned Norelco's motives for offering a stand that keeps your shaver "continuously charged";)

4500. RESULT: rec.antiques.radio+phono passes 411:35

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-23 01:29:43 UTC
From: rdippold@qualcomm.com
Message-ID: <rec.antiques.radio+phono-RESULT@uunet.uu.net>
Source record: 259782
Cross-posted to: news.announce.newgroups,news.groups,rec.antiques,rec.audio.tech,rec.radio.amateur.misc

RESULT
unmoderated group rec.antiques.radio+phono passes 411:35

There were 411 YES votes and 35 NO votes, for a total of 446 valid votes.
There was 1 invalid ballot.

For group passage, YES votes must be at least 2/3 of all valid (YES and NO)
votes. There also must be at least 100 more YES votes than NO votes.

There is a five day discussion period after these results are posted. If no
serious allegations of voting irregularities are raised, the moderator of
news.announce.newgroups will create the group shortly thereafter.

Newsgroups line:
rec.antiques.radio+phono Audio devices and materials of yesteryear.

This vote is being conducted by a neutral third party. For voting
questions only contact rdippold@qualcomm.com. For questions about the
proposed group contact Bill Robie <robie@umbc7.umbc.edu>

CHARTER

Discussion of the use, repair, and collecting of early standard-broadcast
radios, phonographs, and any other similarly-related items designed for home
entertainment sound receiving or sound reproduction.

This group is intended to be a forum for those with an interest
in sound-receiving and sound-reproduction equipment that was generally
manufactured prior to the widespread use of transistors. The group's
discussion, however, will not be strictly limited to vacuum-tube and
mechanical devices, and those with an interest in early transistor radios,
early televisions, and other such items that reflect pioneering audio
technology will be welcomed.

Exclusions:

Amateur radio equipment discussion will be directed to the existing amateur
radio newsgroups and to the boatanchors list. This is only done because
those groups present an established forum for people with an interest in
classic amateur radio equipment. Those classic amateur radio collectors who
also share an interest in early standard-broadcast equipment will fully
appreciate the desire to separate the two interests. Their valuable
expertise will, however, be most welcome in all forums.

Since the summer of 1993, there has been an ongoing discussion among
those interested in antique radios and phonographs (and other related
equipment and materials) about the possibility of forming this

newsgroup. That small core of enthusiasts has rapidly grown in number, and now includes representatives of museums, technical specialists, collectors, and novices with an inquisitiveness about sound reproducing and receiving equipment of the past. With enthusiasm for the preservation and enjoyment of these superb expressions of human inventiveness steadily increasing, the time has come to establish a forum through which knowledge of their history, restoration, and use can be shared by experts and newcomers alike. This proposal represents the essence of what an Internet newsgroup can accomplish--it can produce a collective source of knowledge from which useful information can be drawn for years into the future.
Bill Robie, August, 1994

4502. OLD TRANSISTOR RADIOS STILL WANTED

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-23 02:52:05 UTC
From: ap451@yfn.ysu.edu
Message-ID: <35tfsl$84f@news.ysu.edu>
Source record: 259769
Cross-posted to: misc.forsale,misc.wanted,rec.collecting,rec.antiques,rec.radio.swap,rec.radio.amateur.misc,rec.radio.shortwave

I'm still looking for old 50s and early 60s transistor
radios. These are the small kind made of plastic (sometimes with
metal trim) and were usually made in the US or Japan.
Let me know what you have by emailing me information...
the name and model number (if you know it), whether or not it
works (hopefully) and has the box (not necessary but adds to the value).
If the radio is in poor physical shape, the value is much less from a
collecting standpoint. I'll pay $10 to $40 for most radios, but a
few radios may merit anywhere from $60-200 (Sony TR-55,
Regency TR-1, Toshiba TR-193, for examples).

Keep me posted; thanks again; and 73 de WA4FJF.

Randy
email: ap451@yfn.ysu.edu

a) Is there such a version

b) Where can I obtain a copy

c) Is it Freeware, shareware, or how much does it cost

Thanks in advance

Hello all ham radio clubs !!

need a copy of your newsletter/bulletin(s) to post on my dedicaterd amateur
radio BBS as HAM*INFO*LINK*SOURCE BBS at 1-818-584-1952...
I'am the ARRL affiliated club coordinator for the Los Angeles/So Cal area.
as part of my volunteer duties is to collect and now post all amateur radio
club newsletter/bulletins ! What better way than to post them on my BBS for
all to see & download ! Please send to me here on the Internet or connect
to the bbs and upload "your choice ?"

4505. TN6RR QSL route

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-23 03:58:07 UTC
From: oo7@astro.as.utexas.edu
Message-ID: <35tjof$61q@geraldo.cc.utexas.edu>
Source record: 259777

jfj@pacer1.usca.scarolina.edu (John F. Jarvis KE2WB) asks:

>>Any suggestions re a QSL route for TN6RR very greatly appreciated.

Almost certainly via SL1M - save your $$. TN0CW was
real, though...

Derek Wills (AA5BT, G3NMX)

>the odd reclusive country) would have to change over at once.

Nice argument but it has flaws.

Recall back in the mid-70's the transition the MF marine band went through: AM to SSB. We at the Coast Guard Radio Stations, during that transition period, made our MF voice broadcasts in such a way that those with either AM or SSB radios could copy us. The ITU set a specific date in which AM would no longer be allowed; it was up to boat/ship owners to equip their vessels with SSB by that date. This was a worldwide transition.

Keep in mind there were more ships/boats involved in that change-of-mode transition than there would be airplanes today. [And boy what fun it was picking up those marine radios practically for free and using them on 80 and 160M!]

If aviation were to switch from AM to FM (or even SSB) the control towers, just like the Coast Guard, would have to maintain equipment on both modes during the transition period; it wouldn't have to be a change done simultaneously worldwide as implied in your article.

I would think that SSB would be the perfect mode for VHF aviation comms since there's no capture effect when two stations xmt at the same time; HF aviation comms have of course been using SSB for decades.

> Land mobile has been historically broken into small, isolated groups,
>so a group could buy new FM gear when it wanted. Channel spacings
>weren't affected. Joe's taxis could change quite independantly of the
>fire brigade etc as the two systems are isolated.

Again, the switch from AM to SSB on the MF marine band was worldwide.

> Maritime VHF is FM because they used HF mainly,

you mean MF of course; prior to the incorporation of the VHF marine band mariners used the 2-3 Mc band for coastal comms.

>and only started
>later on VHF, after FM was proven.

Not quite. Maritime VHF FM came into use in the mid-70's at the same time
the world went through the AM to SSB transition. FM in general was a proven
mode in the 50's.

>Aircraft went for VHF early because
>of the benefit of smaller antennae.

Hmmmm... More important is the limited line-of-sight capability
of VHF for local comms; an aircraft wishing to contact a tower only
100 miles away might have difficulty on an HF aircraft band.

Gee, this one looks easy. Apparently, transmitting antennae (_designed_ for transmitting, i.e. low SWR) are OK. Also, since your station is not intended for cable or network TV reception, or entertainment (you can argue over this one. Say it's for educational purposes; to learn about radio.), you can brush this aside. Of course it may still cost you to defend yourself in court (and who will have more money for lawyers?).

And for all those who would say, "If you don't like the covenents, don't buy the house," let me tell you that in many towns you _can't_ find a new home without these restrictions.

Well Mike, I hope you don't talk on the air using the same language
you use here on this newsgroup (with its estimated 50,000 readers
worldwide).

Just be patient, do a lot of listening, and study for your upgrade
in the meantime.

73,
Jeff NH6IL

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACTIVITY

22 SEPTEMBER, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACTIVITY INDICES FOR 22 SEPTEMBER, 1994

NOTE: Energetic electron fluence at greater than 2 MeV returned to
near-normal levels over the last 24 to 48 hours. The background
x-ray flux continued below A1.0 levels.

NOTE: The Effective Sunspot Number for 21 SEP 94 was 22.0.
The Full Kp Indices for 21 SEP 94 are: 2- 1o 1o 1- 2- 2- 2- 2-
The 3-Hr Ap Indices for 21 SEP 94 are: 6 4 4 3 6 7 7 6
Greater than 2 MeV Electron Fluence for 22 SEP is: 9.7E+06

SYNOPSIS OF ACTIVITY

Solar activity was very low. No events were observed. New
Region 7781 (S08E07) emerged on the disk.

Solar activity forecast: solar activity is expected to be
very low.

STD: The limbs appear quiet in Yohkoh x-ray imagery. If old Region 7773 still exists, it is expected to be in a much diminished state compared to what was observed last solar rotation. A full-disk x-ray image is appended to this report.

The geomagnetic field was quiet. The greater than 2 MeV electron flux at geosynchronous altitude was moderate from 21/2100Z to 22/0000Z and from 22/1100Z to 22/2100Z. Otherwise, the flux was normal.

Geophysical activity forecast: the geomagnetic field is expected to be quiet to unsettled.

STD: A transequatorial coronal hole may begin influencing levels of geomagnetic activity on or near 24 September.

Event probabilities 23 sep-25 sep

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 23 sep-25 sep

A. Middle Latitudes
Active 10/10/30
Minor Storm 05/05/20
Major-Severe Storm 01/01/15

B. High Latitudes
Active 10/10/25
Minor Storm 05/05/25
Major-Severe Storm 01/01/20

HF propagation conditions were near-normal over all regions, although MUFs remain fairly low due to the weak state of the ionosphere. Near-normal conditions should continue until 24 or 25 September when a well placed coronal hole may begin influencing levels of geomagnetic activity and high-latitude signal propagation. Nothing particularly significant is expected from this disturbance.

STD ESTIMATED CORONAL HOLE BOUNDARY LOCATIONS DERIVED FROM YOHKOH X-RAYS

VALID AT 02:30UTC 22SEP94

"!H!" = Highly probable coronal hole locations.
"!W!" = Weak x-ray emissions (possible weak coronal holes).

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>in the catalog I noticed it did not have a switch to turn off the
>pre-amp (like my Alinco brand HT amp does). On my amp, I have to turn
>off the pre-amp when I'm in town because of the intermod.

"Helical resonators" is a buzzword for a sharply tuned bandpass filter. The term was the subject of much awe when I first got licensed--like they had magical powers. Folks would get on two meters and brag, "MY radio has helical resonators in the front end". Sounds like hype, but yes, I've found that *well-designed* bandpass filters constructed of "helical resonators" are an effective weapon against letting out-of-band signals into your receiver where they can mix 'n match and work their way into your IF.

But like all filter, they do induce some additional loss, so the preamp' is a good idea. Question is: what is the preamp's gain and noise figure? High gain with high noise is worthless... And yes, being able to kill the preamp' would be very desirable. Perhaps it's connected in parallel with the power amp, so that the switch either bypasses the amp/preamp' completely, or switches inline the amp/preamp'. The catalog didn't specify what the arrangement was.

Incidentally, I took advantage of RS' current sale on the HTX-202 and picked one up for a spare radio to keep here at work. I must say that while it's larger compared to other available radios on the market, IMHO it's offers good performance/features for the buck. I'll still use my Yaesu FT-530 and FT-73R, but the HTX-202 looks like it'll be a good secondary radio to have around, and it didn't cost nearly as much as any of my newer HT's either.

TG>: > THis isb why we need that crime bill to put out more cops on
the street. But conservastives think thats pork.

I know that I'm taking this out of the context of the conversation,
however.... What a professional will tell you is that someone who has
never fired a weapon in either self defense or anger has no compunction
to kill. This person will be more likely, even subconsiously(sp?) to
simply stop or maim an agressor. If you've had any combat experience
you will know that a single shot in the correct place will immediatelly
stop and agressor while several shots in the wrong place will do little
in the short term. A 45 will do more for the stopping power, and again
however, there are recorded cases of an agressor being minus a limb or
other vital body part can still have the last reflex left unabated
leaving the body still functioning to the extant that it will seem that
only a ghost is operating the musculature. I have to assert that a
better trained officer in the field can do more than a brigade of
untrained minions.

TG>: Where have you been for the last 20 years or so? Not living in the United
TG>: States of America! Because the exact opposite of what you said is true.
TG>: Liberals have NEVER supported the police. They only started CLAIMING to
TG>: support the Police in the last two or so years. Conservatives have ALWAYS
TG>: supported more Police.

There seems to be something very wrong with this last statement. What's
wrong with this picture?

TG> if thats the case, why is spending for more police power "pork"?

Only the political pork that I can see. It's a good bandwagon to cling
to and so it attracts the less strong.

TG> The NRA has continually been lobbying congress for
TG>: laws that are tough on criminals. The liberal controled congress has
TG>: stomped on every attempt at real crime control.

There are plenty of crime laws on the books already, what is needed is
quite clear. More effective enforcement of the real laws and fewer of
the political laws. I would go into this in more detial, however
(again) I believe that there is a 150 line limit.

TG> yeah, let the cities solve it on their own with no money!

This is essentially correct. The problem here is that the community
wants only to hire the officers to do the work without the community
support! This is wrong.

TG> And better check that bill
TG>: again. It spends quite a bit on midnight basketball and other social
TG>: programs while putting '100,000' police on the streets. Nation wide, that
TG>: averages out to what, 1/4th cop per police department? Real effective,
TG>: they can even save money by buying smaller cars what with the 1/4th guy in
TG>: the front seat. But they don't pay for the cops on the street. They
TG>: provide funding for a PORTION of the cops. And what when the money runs
TG>: out? And lastly, do you have any idea how much of this 30 billion dollars
TG>: is funded from..... NO WHERE.

I know that I'm not the smartest person online here, however (again) did
I miss something in the last paragraph?

TG>: Next, what does what you said have to do with what I said and you quoted?

Say that again...!?...:)

TG>: Aside from that;

TG>: You quote a hell of a lot to make a 2 line response and then leave a bunch
TG>: left over with nothing after it? Bet you litter too.

I really don't litter, I know you didn't mean me....still.

Why should a gasoline piston engine in a car produce any more or less
ignition noise than a gasoline piston engine in an airplane? In fact, the
airplane has twice as much ignition stuff per cylinder, so I would expect it
to produce more.

>HF aviation comms have of course been using SSB for decades.

No, for two reasons. First, air traffic centers have DF equipment that
depend on a steady carrier to work. This is used very often to find
"lost" general aviation aircraft. And second, keeping all those radios
on channel closely enough to be intelligble on SSB would be a major
chore. That's why ACSSB was invented, to allow a pilot carrier for AFC
(and compandoring). If a change were to be made, ACSSB would be the
logical choice.

From: ss@JH.Org
Message-ID: <35unbe$qls@snoopy.jh.org>
Source record: 259798

I have to install a RF Concepts 2m/440 Amp in my Toyota Camry.
I have a bunch of questions:

What guage wire do I use? The brick is rated at 6 amps.

I plan to run cables from the battery to under the driver's
seat. I will fuse the pos and neg leads at the battery. Do
I use 6 amp fast-blo fuses or what?

If you are familiar with '92 Camrys do you have any
suggestion for routing these lines through the firewall?

Should I create a chassis ground at the amplifier as well?
Does this ground need to be a braid or is it sufficient to
use the same guage wire as the power line?

Thanks for your help.

BTW I'm also going to post about the above installation with the
subject "Camry Installation"

As a former "shak" employee, I can tell you that if it isn't in the computer
(the warehouse has not rec'd it from the manufacturer) then it will probably
not be available for quite a while.

From time to time, things will even appear in the catalog and then never get
released until the NEXT year's catalog is out!

It's all a plot to favor the CATV franchise...

1. Builder plans to build a nice "development" in a "near fringe" area that for the most part will require an outside antenna for decent TV reception.

2. Builder and CATV franchise make a "deal" -- CATV franchise will pay the builder if he arranges to slap an outside antenna restriction on EVERY house in the development then everybody will be REQUIRED to subscribe to CATV if they want to watch TV.

3. Builder figures that most people will probably want CATV so he goes along. Builder makes money... CATV company makes *lots* of money.. Home owners pay for it all.. Its simple ;-)

Just wait.. In a few years when direct satellite programming becomes more poplular and companies selling this service start to really grow and realize that there is lots of money to be made... but the subscribers will require a "small" satellite antenna on their roof.. the franchises will be looking for new subscribers in these "antenna restricted" areas.. and you will see these silly outdoor antenna restrictions lifted.. at least for the satellite antennas.. unless they figure out a way to make it work with an indoor antenna.

SIDE NOTE: Have you ever had your CATV service disconnected? The first thing they ask you is " Where are you moving to? " ... and when you say " I'm not moving -- I just don't want cable anymore " they just look at you funny... almost in disbelief!

Several years ago I bought an old used HP digital voltmeter from them. The unit arrived very well packaged with a manual. Their catalogs are a great source of info about old test equipment. But it seems their test gear prices have really gone up in the last year. They can copy many manuals (and the HP mauals are BIG) but they charge plenty for them.

They have also started selling Ham and computer gear. They have a 300W tuner that looks like a real bargain at $140. They usually have prices in their ads instead of "call for latest price". These prices appear quite competitive (hard to tell since so many other dealers don't advertise prices).

The standard disclaimer: I am just a customer and have no other interest in Tucker Electronics.

>There are too many AM radios in airplanes, and when there was shortlived talk of FM for airplanes, it was thorougly trounced by a broad spectrum of airplane drivers/owners/operators for purely economic issues.

What would an (FAA accepted?) FM radio cost? What is the total anual cost (hangar/ground space, inspections, maintenance, fuel) of operating a single engine plane? Is a radio upgrade going to break the bank? What is the cost of a new radio as a percentage of yearly (or even amortize it over 5 years) operating expenses? I'm not saying your wrong, just curious about yearly operating costs.

I'd suspect the hobby of aviation has just as many people reluctant to "upgrade" as does the hobby of amateur radio. I still hear local repeater chatter regarding the "problem" of "upgrading" your HT to PL when one's favorite repeater moves from "carrier only access" to full-time "PL tone" access. As if PL is some high-tech luxury!

>to produce more.

Shielding. In a typically automobile, ignition noise suppression efforts are pretty much limited to resistive plugs and plug wires, to take some of the sharp edges off the ignition pulse. Most all other filtering efforts are within the receiver portion of the car radio, and besides, we all know AM is dead these days...

Aircraft ignition systems feature full shielding from magneto to plug electrode, with flexible metal braid covering the harness and fully shielded plugs. Receivers have noise suppression circuits on the power leads, and (relatively) complex noise blanking circuits. But ignition noise is still often a problem.

(Prediction - when Slick's new electronic ignition system comes into wide-spread use, we'll see a rise in ignition noise complaints. Electronic ignition have a higher voltage spark with a faster rise-time, thus providing a lot more energy to radiate. Then we'll all have to get new resistive ignition harnesses and plugs. Slick's pretty smart, eh?)

The reason we still have AM comms is purely economic - You'll never get a change through which will replace the AM system without a major squeal from aircraft owner groups. "Too expensive", they'll say. "Unfair to the little guy", will be the cry. Heck, we can't even legislate out the old 90 channel radios.

-Mark

4535. FCC Application Delays . . .

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-23 15:21:53 UTC
From: ss@JH.Org
Message-ID: <35urqh$r75@snoopy.jh.org>
Source record: 259811

Just to let everyone know the status of my ticket:

I passed my General on 7/24. Last week I saw some posts
and heard that others were receiving their ticket in 5-7 weeks,
so at week 8 (09/18) I decided to call the FCC.

I was told that the license was received on 8/15 but that there
was some problem and that it would be returned to the 'Amateur
Group.' I called the ARRL VEC dept and a very understanding
fellow, Peter Warner, explained that they had rec'd nothing back
but it could take 6 weeks! He suggested that I could call
back and try to get more info.

The second time I called the FCC I relayed the previous conversations
and was then told that the application was sitting in an error folder
because data entry had some problem and it would have to be reviewed.
She could not say if it would have to be returned to the ARRL or not.
She could not give me any further information and told me that there
was no way to expidite it or even to find out what is wrong with it.

I spoke to Mr. Warner again he said that it could sit for a
couple of weeks in the error folder.

I wonder if I am alone (in this folder) or if there are other
hams-to-be in there with me? I know that the current amateur
application processing time quoted by the FCC is 8 - 10 weeks, but
this is a very frustrating time.

I hope that the people answering the phones are not the same ones
doing data entry. If they are, I will limit my calling them. I
considered asking for a supervisor, but this may make matters worse?
Has anyone tried to speak to someone besides the clerk that answers
the phone? I'd hate to make a fuss and have my 610 dropped in
the circular file (or is that where it is now?).

I am aware of the plans for electronic filing of applications
and retrieval of new call signs, I just hope that those of us
that are stuck in the current burocracy [sp?] aren't forgotten
about.

If others are not aware, the FCC new toll-free number is
(800) 322-1117.

Aircraft ignition systems are much more carefully shielded than those
in your car. A lot of them have the plug wires encased in an ignition
wire shield that is essentially conductive conduit (shielded plugs
have threaded fittings on _both_ ends to connect to this conduit)
which may be flexible copper braid or actual rigid tubing (usually in
radials or older inline or vee engines). This essentially
completely kills the plug noise in the radios. The unshielded systems
are usually very carefully balanced with caps and chokes to minimize
the radiated RF.

Aircraft radios, BTW, are sensitive to signals in the nV/M range -- if
somebody starts their car on the ramp, you can definitely hear it even
50' away with your squelch turned down ... strobes make a fun noise
too ...

>court (and who will have more money for lawyers?).

Again, nonsense. Complete nonsense as far as real life attorneys and
judges that I have met. Your point about money for them is well taken,
however, you had better have a good argument if you are about to take
the time, money and effort to invest in such a thing. I wouldn't take
this direction suggested, it is a waste of time.

>And for all those who would say, "If you don't like the covenents, don't
>buy the house," let me tell you that in many towns you _can't_ find a new
>home without these restrictions.

That is, unfortunately true, especially here in SoCal. The Legislature MAY
be able to do something about it and survive a Constitutional challenge
to freedom to contract, not my specialty in the law :-) .

Again, please make "reasonable" interpretations and statements when you
represent ham radio to people who don't know us. These silly attempts
to use technicalities, if used in public, will put all of ham radio in
a very bad light as far as the public is concerned. We need mature,
reasoned approaches to the problems that face us.

Rudi/DK7PE's cards from his TN0CW operation are out now -- mine hit yesterday.
Interestingly enough, it was mailed from Miami. The card is an interesting
color
picture of part of a street in downtown Brazzaville (I gather it's
Brazzaville...that's
where he was operating).

Glad to have gotten this one on 80m...

The one thing I have noticed is that on used equipment their prices seem very, very high. I routinely get a catalog from them and in it I see old computer systems with 64K, tape drive, and dinky monitors selling for $800.

Even on new equipment their prices are nothing special.

I suppose if they have a piece of equipment that you absolutely, positively need and cannot get anywhere else, buy from them. I never would, however.

basically the problem is that everyone grows up. and there has been a serious lack of recruiting for folks under the age of 30 for whatever reason for a long time.

you could be the first in a new organization. then again, you'll be in QCWA when you are 34 (in 2012) whereas i'll be 41 (in 1997) when i'm eligible.

is there a school radio club? and if so is there enough interest in the younger kids to get a legacy going? this usually runs counter to the strong "classing" of people that goes on in the school...

I was going to just skip this message, but it hit too close to home.

If I buy a piece of property, and decide that I want 10 antennas, why
the hell is it any of YOUR business? People like this really piss me off
(mainly because I live next door to one of them.) They constantly look
into YOUR yard, complaining about all sorts of things. Why is it people
just can't mind their own g-d business?

So, do we really want neighborhood regulation of what activities you can
and cannot participate in next? Maybe playing ball with your kid in the
street should be next. Or, how about outlawing any stereos - they cause
nothing but noise.

At first, I tried to be pleasent. I attempted to be accomodating. Now,
I tell them to screw. Its a give, give, give, give scenario. They're only
happy when you give up >your< hobby to accomodate >them<.

John Chapman (jwc@col.hp.com) wrote:
: Be specific. Contracts can be modified before and at time of sale.
: If the selling agent accepts, your in.

With covenants, it's seldom going to be that easy. Most are recorded and run with the land; they aren't simply a one-time agreement between the seller and the buyer. You won't get around them with an amendment unless you get all the property owners covered by that set of covenants to agree; at least that's the way mine are. However, in practice, in my case (12 lots in the development covering 40 acres [lots of space between houses], and the developer long gone), folk seem to just ignore them and do as they please, with reasonable respect for the neighbors and neighborhood.

4554. Radios in Land Rovers etc

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-23 17:36:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2E8293DE@smtp>
Source record: 259791

I read with interest the article in Sep QST on cars and radios. I am not very happy about the fact that Land Rovers and Range Rovers arent included. For those of us who have such cars, that is 4 wheel vehicles such as Jeep Cherokee etc, I would like to add the following information.
- I have receivcd informatin, that there is no problem in installing radio transmitters in Land Rovers. Wherever Land Rovers are used in a military setting, they often have radios in them.
- Whenever my Range Rover starts, all battery circuits turn off, therefore, turning off any radios.
- Due to the height, I have installed a Hustler 20 meter antenna (with the short MO-4 mount) on the front of the car, on a spring loaded mount on the bull-bar. It is a couple of feet away from ignition and I have no problems with the electronic systems.
- If a car antenna has two much SWR, latches turn off and all sort of things happen, common to other cars as well.
- Because the antenna is on the fron (right side), it is directional in nature (similar to a two element beam). This would happen to other drivers who use the car body as a reflector.
- After several experimements, it has turned out that the best place to install HF antennas is in the front of a car (the right side of the front bumper is the best) and not in the back, especially with hatchbacks.

I hope this info is useful to others.

4555. Answer to "How far can I talk?"

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-23 17:36:37 UTC
From: mwhite@mitre.org
Message-ID: <mwhite-230994133046@m14494-mac.mitre.org>
Source record: 259821

Every now and then someone posts a question like: "How far can I talk on an HT?". There's lots of "ifs, ands or buts" in the answer to this question, but here's a useful little rule of thumb: The distance to the "radio horizon" is the square root of twice the antenna height in feet. This represents the maximum line of sight distance over flat ground; terrain, buildings, etc. will limit coverage further, so the calculated value represents a best-case maximum for line-of-sight contact. At 2 meters and below, there is significant knife-edge diffraction, so you can frequently maintain contact "over the horizon", but it gets spotty. At UHF and higher, the SQRT(2H) formula works pretty well as a maximum. The formula is based on the "4/3 earth" model which accounts for atmospheric refraction.

Just thought people should know about the POOR SERVICE that W & W Associates has given me on a battery purchase. I ordered a battery on September 13. They told me that company policy was to process and ship the order within 48 hours. Well, as it turns out, they didn't process the order until September 19, which was verified by the charge date on my Discover Card. Next, they didn't ship the order until September 22! So now I sit here waiting, knowing that it will be another week until UPS gets it here from New York. Total time from placement of order until receipt is expected to be two and one-half weeks! When I originally ordered it, I expected it to be here within one to one and a half weeks. Pretty poor service if you ask me. Also, they had my phone number, so they could have called me if there was a problem.

4557. Postage rates for QSL cards

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-23 17:56:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2E8298B1@smtp>
Source record: 259792

The European Commission has instituted a directive some time ago to harmonize the charges levied for mailing purposes within Europe.

For a standard letter (20g), Europe is treated as part of the letter's originating country. Thus the cost of mailing a letter, via airmail, from Brussels to say, Paris, is the same as from Brussels to Antwerp, another Belgian city.

The cost is harmonized throughout the Union. It is currently about 50 cents per letter (about ECU .44) via airmail. The cost remaines the same for other European countries (non-EU members) but it is no longer airmail.

For areas outside Europe, the letter cost is doubled onto which you add airmail charges and then, individual countries charge whatever they want. Currently from Belgium, a letter to the US costs BF 38, which is $1.20.

There is no distinction between postacards and letters, thus a QSL card, is a letter so put it in an envelope.

I see that someone posted the same question but did not see any answers posted here. The faq postings didn't help either.

I'm a recently licensed amateur contemplating my first HT purchase. Leading contenders are the Yaesu FT530 and the new Kenwood TH79. Other than the ads in QST I don't know anything about these units. I'm looking for a nice HT dual-bander and at present don't anticipate heavy use. Primary interest will, for now, be in the two meter band. I'm also interested in receiving info on mods or procedures for these units, in particular, extended receive capabilities.

If you feel like recommending other current model HTs to me, please do. Again I would be interested in extended receive capabilities.

Thanks in advance, Roy

MONDAY SEPTEMBER 26, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* MACHHOLTZ-2 NEWS *
====================
Astronomers are keeping a watchful eye on Machholtz-2, a comet discovered to be racing toward the Sun by an American scientist last month. Shortly after the comet was discovered, observers reported the comet had broken up in a manner similar to comet Shoemaker-Levy-9 before its impact with Jupiter in July, and there is some concern the fragments of comet Machholtz-2 could impact the Earth in the future. Five fragments have been spotted so far, and all are heading for Earth's orbit. However, astronomers warn it is extremely difficult to predict the long-term behavior of the comet fragments and advise the comet will be monitored closely.

* NOAA-11 FAILURE *
====================
Reliable sources report that NOAA-11's AVHRR failed at 23:30 UTC on 13-Sep-94. A brief report indicated that the fault appeared to be electrical. NESDIS personnel have been working diligently to solve the problem, but it seems that APT as well as high resolution images are no longer available from NOAA-11 because of this failure.

* AO-16 RELOAD COMPLETE *
=========================
As of 0330 UTC on 21-Sep-94, the AO-16 File Server is open and returned to general use. The AO-16 Command Team would like to thank everyone for their patience during this important "Preventive Maintenance" reload. Thanks go to the AO-16 Command Team consisting of WJ9F, WD0E, VK7ZBX, KB5MU, as well as NK6K and WB9ANQ.

In the body of the message (not the subject line) users should type the words "subscribe press-release" (no quotes). The system will reply with a confirmation via E-mail of each subscription. A second automatic message will include additional information on the service. Questions should be directed to (202) 358-4043.

* MIR NEWS *
============
On 09-Sep-94 Malenchenko and Musabayev performed an EVA for the first time. The duration of the EVA was more than 4 hours (a reliable source even spoke about 5 hrs 2 mins.). During the pass in orbit 48915, between 1200 and 1207 UTC when Mir was VHF of observers in Europe, the cosmonauts reported the closure of the hatch at 1202 UTC. During this EVA they inspected the outside of the entire orbital complex, installed experimental materials on outside platforms for exposure to open space and removed other experiments of that kind for storage inside the complex. They repaired the damaged thermo-isolation layer on the transition section (P.Kh.O.) of which a 30x40cm piece had been torn away during the collision with Soyuz-TM17 in January 1994. The inspection made clear that the toughes of the freighter Progress-M24 during its second approach on 30-Aug-94 did not cause significant damage.

On 13-Sep-94 the cosmonauts worked in open space for a second time. The EVA lasted 6 hours and 1 minute between 0631 UTC (opening of the hatch) and 1232 UTC (closure of the hatch). The cosmonauts performed many minor repairs, replaced bolts, screws, etc. of platforms and equipment on the outer surface of the complex. They also spoke about an old antenna. Activities of that kind must be done now and then, but have been often neglected during EVA's due to more important matters. The cosmonauts also did some preparatory work aimed at the future transfer of the solar batteries from Kristall to Kvant-1. This transfer has been put back again to the beginning of 1995.

Radio communications during the EVAs were copied in Europe on a frequency somewhat lower than normal, 143.622 MHz, shifting by Doppler to 143.617 MHz. Listeners in Western-Europe, including the UK, who monitor MIR traffic during EVAs often experience heavy interference caused by cross-modulation from an airtraffic control frequency.

>but here's a useful little rule of thumb: The distance to the "radio
>horizon" is the square root of twice the antenna height in feet.

That means that if I'm up 50 feet, then I can talk (sqrt(2*50)) = 10 feet?

Just kidding. You mean furlongs, right?

Seriously, though, you should take into account that the other station
might have an elevated antenna and that will affect the maximum
distance as well.

4563. Re: Youth amateur radio club?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-23 19:29:53 UTC
From: Peter Coffee WA2OJL/AE <72631.113@CompuServe.COM>
Message-ID: <35vabhble1@mhadg.production.compuserve.com>
Source record: 259629

In article 4087, brownjeb@delphi.com writes:

"I've had my license for 7 years, and have never heard of a youth
amateur radio club. Does anyone know of any?"

When my 8-year-old got his license, I made up a mailing list from
the QRZ CD-ROM and sent a letter to the 63 hams aged 16 and under in
the 12-city area around us. The letter included a preaddressed,
pre-stamped postcard inviting them to fill in their call sign and
be put on a permanent mailing list for group activities aimed at
their interests and schedules. Of 63 cards that went out, only
four of these (PRE-STAMPED!) cards came back, and our attempts to
get even this small group together -- for example, to drive down
to San Diego (about 2 hours) for the Southwest Division convention -- have
consistently run afoul of soccer, football, family activities, and
the like.

I would welcome *your* suggestions as to what kind of things a young
operators' group could do that would make it more attractive than some
of the other things that seem to fill young people's free time these days.
Transmitter hunts are the only we've identified so far, and we hope to
do one this autumn. But it's tough.

Even grown-up clubs seem to have a tough time these days: ours is
looking for a president for next year, and I *know* what my XYL would
say if I took on the job while we still have two kids in pre-school...

Eagerly seeking ideas for young-ham activities here as well.

- Peter AC6EN

: >to my BP-7 and watched the voltage. It never peaked, it just kept going
: >up. Did I not leave it on long enough or does the phenomenon not work
: >at a 0.1 C charge. I was afraid to leave it on more than 30 hours...

: You missed it. The dip is slight, a few millivolts, and you have to
: measure it under load, not while charging voltage is present. The
: dip is also short, continued charging will cause the surface charge
: voltage to go higher after the dip occurs. Chargers using this method
: of detecting charge status are generally pulse chargers that momentarily
: apply a load and sample the cell voltage after each charging pulse.

: Gary

Maxim does not do it this way with their max713 nicad charger chip. They
charge with a constant current, and measure the cell voltage at intervals
(typically a minute or two apart, but this depends on the charge rate).
If a sample is found to be less than the previous one by more than 2.5 mV
per cell, this is taken as the end of charge indication and the rate is
reduced to trickle charge.

> wrong, just curious about yearly operating costs.

They must be FCC type accepted for the FAA to approve them.
Yes, a new radio stack can cost from $9,000 to $28,000 and up...
This for an airplane that you bought 10 years ago for $18,000.
Yes, this would "break the bank".

> I'd suspect the hobby of aviation has just as many people reluctant
> to "upgrade" as does the hobby of amateur radio. I still hear local
> repeater chatter regarding the "problem" of "upgrading" your HT
> to PL when one's favorite repeater moves from "carrier only access"
> to full-time "PL tone" access. As if PL is some high-tech luxury!

If you think aviation is a hobby like ham radio, you have another (free) think coming. Many of us airplane owners and former airplane owners put almost every available dollar into our love of flying (for fun or for work). Ask anyone who owns (or shares) an airplane about what else they have or do. Usually, we can make do with a 10 year old car, live in an apartment, or a house we bought more than 10 years ago, no "cruise" vacations, no " 2 week ski" vacations, no cabin in the woods, no boat or camper... yes, almost every available dollar not required directly for subsistence goes into aviation. It is our choice.

What we object to is the "do gooders, with a better idea" who tell us... "this is how you should spend your money... and we'll pass a law making you buy new (transponders, radios, et.al.), just to make sure you do"!

Yes, PL is some high-tech luxury. The luxury is polluting the airways with all the garbage instead of filtering it out AT THE SOURCE! Putting PL on a repeater masks the problem, while creating another one, without fixing the first one! Bad engineering! Bad idea!

> David GM4ZNX

As of about 2 months ago, the FAA has cancelled the MLS program in favor of GPS. I believe that they will only continue pursuing MLS installations at those locations where necessary to meet international agreements (I assume this means at the big internation airports that see significant volume of non-US aircarriers).

4569. 75 ohm hardline question

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-23 20:17:36 UTC
From: smesko@boi.hp.com
Message-ID: <CwLn1D.HrB@boi.hp.com>
Source record: 259635

I'm interested in using 75 ohm 1/2" hardline coax to feed a HiGain triband Yagi from my Kenwood TS440S/AT. On the antenna end, I'll need a short piece of flexible coax due to the rotating Yagi. Should this coax be 50 or 75 ohm? Should I consider using a 75 to 50 ohm balun at the antenna end?
From a practical standpoint, does this impedance mismatch really matter?

In the shack, I have a short run of 50 ohm coax from the rig to a manual coax switch. The switch has multiple runs of coax to antennas in other areas of the yard distant from the tower and yagi. The hardline will be run from this switch out to the tower - about 150 feet. Should any type of matching be done on the shack end?

I faintly remember this subject comming up in this group before but don't recall the responses. I know folks have done this and am interested in their ideas, solutions and results.

I got this new coax for a really good price (free), and if it makes sense would like to replace my old coax run out to the tower.

Thanks for your help.

Steve Mesko

4570. STD: Weekly Solar Terrestrial Forecast & Review for 23 September

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-23 20:29:46 UTC
From: oler@rho.uleth.ca
Message-ID: <9409232029.AA00175@rho.uleth.ca>
Source record: 259537
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.info

--- SOLAR TERRESTRIAL FORECAST AND REVIEW ---
September 23 to October 02, 1994

Report Released by Solar Terrestrial Dispatch
P.O. Box 357, Stirling, Alberta, Canada
T0K 2E0
Accessible BBS System: (403) 756-3008
SKYCOM Software Announcement: (403) 756-2386

** SOFTWARE DISTRIBUTION ANNOUNCEMENT **

The Solar Terrestrial Dispatch is seeking individuals who are interested in helping us redistribute and market the line of software products we have developed. Specifically, we will shortly permit authorized individuals to RESELL and distribute the following:

* BCAST Solar and Geophysical Database Management Software.
Contains all of the utilities necessary to use the Extended Database below. Also contains a large limited database of solar and geophysical data from 04 Sep 1991 to the 1993 with the ability to track solar and geophysical information to the present date. A powerful solar cycle analyst.

* Extended Database of Solar and Geophysical Data.
Contains Sunspot numbers from 1818 to 1993, solar flux values from 1947 to 1993, and geomagnetic data from 1932 to 1993. Ideal for those studying solar cycles and related statistics on solar or geomagnetic storms.

* Professional Dynamic Auroral Oval Simulation Software.
Determine when and where to look to see auroral activity. Simulates the position and appearance of auroral activity from any location on the Earth. Also simulates the appearance and location of the Sun and Moon and comes with an extensive database of auroral activity sightings.

* SKYCOM HF Ionospheric Signal Analyst Propagation Software.
A sophisticated and powerful high-frequency propagation program. Ideal for radio communicators or listeners, commercial broadcasters, educators, and anyone else interested in radio propagation. Produce broadcast coverage maps, global maps of maximum usable frequencies, maps showing the proximity of signal paths to the auroral zones, and MUCH more.
Ray-trace signals between any two paths. Produce an all-band

spectrum analysis showing what bands or frequencies to use at
specific times of the day, what transmission elevation angles
to use, modes of communication, magnitude of multipathing, and
MUCH more than is possible to list here. SKYCOM outranks most
other propagation programs in features, power, and
flexibility.

There are no special personal requirements to become authorized. Anyone
can participate. To find out how, send a request for more information to:
Oler@Ultrix.Uleth.CA or to: COler@Solar.Stanford.Edu along with your
postal mailing address. We will send the required information to you
through postal mail.

Propagation Forecast Bulletin 39 ARLP039
From Tad Cook, KT7H
Seattle, WA September 23, 1994
To all radio amateurs

SB PROP ARL ARLP039
ARLP039 Propagation de KT7H

The Sun is quiet. On Tuesday and Wednesday there were no visible spots on the solar surface, and geomagnetic indices have been very low as well. The low geomagnetic indices (the K index and the A index) mean stable conditions, but the lack of sunspots and resulting low solar flux make the Maximum Usable Frequency on HF paths low also. This is not what we want to see as we enter the Fall DX season, but be prepared for more of this over the next several years.

As the current solar cycle declines, we can look forward to the end of 1997 as the period in the next cycle when solar activity will increase again to where it is now. In the interim, 1996 should be the year of the quiet Sun, with the lowest average solar flux now projected for October of that year. The current projection based on the SESC Regression Model is for the peak solar flux to be around August, 2000.

During the projected peak year of the next cycle, cycle 23, the author of this bulletin will turn 48. Starting out in amateur radio at age 12 between cycles 19 and 20 gave an early start to observing solar cycles, but still, one does not get to experience very many in one lifetime. It is also a sobering thought to realize that one never knows when an extended period of quiet Sun, or no solar activity for decades, might return. There is evidence of several periods like this throughout history, although none since the invention of radio. What other course might the development of radio have taken if there were no sunspots for the first half of this century?

Sunspot Numbers for September 15 through 21 were 11, 12, 19, 30, 29, 0 and 0, with a mean of 14.4. 10.7 cm flux was 71.5, 70.8, 70.3, 71.9, 70.2, 69.8 and 69.9, with a mean of 70.6.

Look for the solar flux to rise to around 90 at the first of
October, and then fall to the present level after mid month. A
recurring coronal hole should bring disturbed conditions around
October 4 through 7.

I use 75 ohm hardline on some U/VHF runs and ignore the loss, swr is
1.3 to 1 caused by the mismatch. At higher power levels it may be worth
worrying about.

Also remember that unjacketed aluminum hardline will have a dissimilar
metals problem with the galvanized tower and must be jacketed at any point it
touches the tower. I used a large diameter garden hose and
cut slices that i wrap the hardline in

|> >two different antennas on it but once the rules are lifted somebody always
|> >goes to the extreme.

Well, no. That's not why such covenants are places. That's the reason given,
but it's not the real reason. Developers place such restrictions on
new developments because they cut deals with the local cable company. The
cable company agrees to wire the development for free if the developer agrees
to put a no-antennas restriction in the covenants. It's done pretty
universally.

: have called me if there was a problem.

: 73 de KE6IHA - Darryl Linkow

My order also took quite a while to process. However, I usually don't
get upset unless it takes over a month for a mail order purchase -
but that's me.

Anyway, the point of my post is that the fnb26 equivalent I ordered arrived,
and works as advertised (I measured the capacity). The plastic on these
packs usually looks a little cheesy, and this one is no exception - sink
marks, texturing not quite up to snuff. Also, mine arrived with a small,
cosmetic only, crack in the plastic. I guess it makes little difference if
the radio is in a case. Don't expect it to look as perfect as the one
from the manufacturer of your HT.

Was it worth it? Well, This might only be meaningful to Canadian readers,
but It cost me CDN $73.80, including currency exchange, all taxes, handling
fees, etc. It would have cost a grand total, delivered, CDN $151 to order
a "real" fnb26 from a retailer in Toronto (and it would have a capacity
of 1000mAH vs 1200mAH for the w&w unit). So, provided it lasts, I'd have to
say yes, at half the price, it was worth it. YMMV.

4583. RAIN Dialup for Sept. 23-29

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-23 23:49:20 UTC
From: Kc9rp <Kc9rp@f747.n115.z1.nwugate.fidonet.org>
Message-ID: <780346160@f747.n115.z1.ftn>
Source record: 259699

The September 23-29, 1994 edition of the RAIN Dialup (708/827-RAIN)
includes:

"GMRS, the Best Kept Secret", part 1
interview with Corwin Moore/WB8UPM, the driving force behind the Personal
Radio Steering Group (PRSG).

RAIN (Radio Amateur Information Network) programming identical to
that heard on the RAIN Dialup is available on audiocassette for
significantly less than long distance charges. For an information sheet,
call RAIN's voice mail (708/518-6551) and leave your name, call sign, and
mailing address.

The RAIN Dialup is heard in Markham, IL, Wed. at 8 PM on the W9NXP
A.R.E.A. repeater, serving Chicago's south suburbs on 147.135 Mhz.
RAIN programming is suitable for relay via ham radio.

73, de Hap/KC9RP @ W9ZMR.IL.USA.NOAM.

(Jerry Bransford) writes:

>It still has little to do with FM capture effect. It's purely economic.
>How old is the average airplane? How old is the average car that uses land-mobile radio service? And how much $$ does an aircraft radio cost compared to one suitable for a car? And typically it's the government user that uses land-mobile radio services who can decide to spend the $$$ because it's only tax dollars they are spending, not their own personal dollars.
****

How old is the average ship? See my article concerning the mid-70's
worldwide transition from AM to SSB on the maritime MF band.

And note that shipboard radio equipment prices rival that of aircraft.

****
Jerry continues:

>Cars are replaced every few years, and end-users of land-mobile (typically government/taxi/police/fire) buying cars/trucks can make that switch to new radio technolgies with little or no economic impact. Not so with airplanes. Airplanes are NOT replaced regularily, and thus there is a huge economic cost for someone to mandate that airplanes *will* switch to the imcompatible FM mode.
****

Ships don't get replaced all the often yet the owners endured the
change of mode.

{Jerry, it's quite difficult editing your articles if you don't use
the return key at the end of each line.}

>
>Keep in mind there were more ships/boats involved in that change-of-
>mode transition than there would be airplanes today.

I would kind of guess against this. There are probably in the vicinity
of 250,000 aircraft in the U.S. alone. I would not be suprised if there
were, in fact, twice that many.

>I would think that SSB would be the perfect mode for VHF aviation comms
>since there's no capture effect when two stations xmt at the same time;
>HF aviation comms have of course been using SSB for decades.

I disagree. As an active pilot, I would *MUCH* prefer FM to SSB. I
want a mode where there will be no modulation of the received signal by
signal strength flutter if (for example) the reception path happens to
be through my propeller. I want the maximum signal clarity. I want a
mode where signals are of consistant volume level from the receiver.
SSB fails in all of these counts.

>Again, the switch from AM to SSB on the MF marine band was worldwide.

How many stations switched? A lot, I bet. Still, there are lots of
airports -- many of them are inland.

Given all this, I would really love to have aviation radio be FM with
20 kHz spacing. That works just fine for my 2 meter rig with essentially
no interference from the next channel over -- aircraft radios generally
are such junk that they hear stations 25 or 50 kHz away. More channels,
real audio fidelity, levels consistent in the noisy aircraft -- lots of
advantages.

About the only time the capture effect would be likely to matter is when
one of the aircraft is vastly closer to the receiver. It could well be
an advantage on 122.8 for traffic announcements. You would hear the local
ones, and not lose them to the ones from 50 and 100 miles away.

Alan

The airplane has shield braid running from the magneto to the plug, and
the spark plug is designed to ground the braid. Dunno about the magneto end.

Yes, "Magneto". It's possible too that the magneto has a slower rise
time that indicates that fewer of those nasty interference-making
high-frequency harmonics are being generated. I don't know; I've never
found anything that looks at this angle.

4590. Singapore's Ham Laws (or: we in the US have it easy)

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-24 02:43:15 UTC
From: jeffrey@kahuna.tmc.edu
Message-ID: <CwM4w3.BGD@news.Hawaii.Edu>
Source record: 259679

The following appeared on the QRP email newsgroup. I'm posting it to show US hams how severe other countries can be in regard to licensing. Dan gave me permission to post it. It starts with Dan asking the QRP group for an IC-22A - he needs one quickly since to get his license (which he's been waiting for over one year) his station first has to be inspected by the government and only certain radios are approved by the govt (the IC-22A is one on them; on xtal rigs allowed on 2M).

After that the laws only get more severe...

Jeff NH6IL

**********Begin Included Article**********

> -> Anyone have an IC-22A for sale?
>
> I have one but was not interested in selling it... Just curious, what are
> they worth these days? This one has something like 18 channels worth of
> crystals in it...

No idea how much it costs but am desperately looking for one. Was told that it should not be more than 100 bux. The reason for the desperation is that the authorities want to give me a license but insist on seeing my equipment first! Yes, dumb, but they're the law.

Anyway, they've only approved exactly 10 models for 2M use and exactly 10 models are out of production, and more than 10 years old. There are a few models that I am looking for:-

1) Icom IC-215
2) Icom IC-22A
3) Kenwood TR-2200A, TR-2200G
4) Kenwood TR-7200, TR-7200G
5) Yaesu FT-2F
6) Yaesu FT-221

You may try other CRYSTAL controlled only models but bear in mind that each radio you submit for type approval will cost you $200 additional fee. Yep, I could buy another rig with that kind of money if I had it.

If you're wondering, they DON'T allow ANY kind of synthesized 2M equipment under ANY circumstances, and have no plans for allowing them. The reason is that amateurs are only allowed about 5 or 6 spot frequencies on the 2M band. Thus you can see the reason for my desperation.

Among other things I had to do was:-

1) Submit 2 character references
2) Sign a statutory declaration of secrecy at the high court
3) Give model and serial # of radio AND antenna! (must be < 10w ERP)
4) Give schematic of installation and antenna
5) Submit letter from Landlord approving installation of antenna

All this before they even consider issuing me a license. I need to get this radio by next month cos that's when they are supposed to give the license to me. I've got all my other papers ready and submitted most of them, now I need to get a radio (an almost extinct one at that). After all this, there is still no guarantee that they will issue a license, and they are not required to give a reason.

Oh, did I mention? They will send people to inspect my station to ensure that I am complying with all regulations AND that my equipment complies with what is declared. If I buy a new radio, that too needs declaration and approval first.

This is a temporary restricted license I am referring to (novice) but I expect my general in December. For HF radios, there are about 35 approved models for use. $200.00 for approving anything else. The restricted class has just (less than 2 months) been implemented.

So, don't bother bringing any synthesized sets here. Same thing for handheld ones. People have done that, no luck with them so far. Foreigners must be here at least 3 months to even qualify to apply for a license.

In order to operate mobile, you need to apply for special permission/license. Otherwise, for FDs you need to apply for special permission also. Your license allows operation ONLY from your present location, as declared. If you move or change hear, you need to inform them in writing.

Computer logging of QSO's is not officially permitted.

Spot checks are conducted from time to time at your station to ensure compliance.

Maximum power allowed for the first year - 25w, thereafter 100w. For VHF, max power is 10w ERP. I was told (unofficially) that YAGIs are not permitted. On the first year, the general licensee can only operate A1A and A1B.

Special permission required to operate in most (if not all) bands above 2M.

Oh, yes. The theory test costs $40 ($20 for students) and the morse test costs $50 ($25) for students, restricted license $25 and general license $50. License needs to be renewed yearly, failure to do so will mean needing to retake morse test and to reapply. Theory tests are conducted once a year, and morse test twice a year. You pass the test, submit papers, then they might give you a license.

There's a big monitoring station around which listens in for abuse of channels, misuse etc. though this is not publicized, it is a well known fact.

Come to think of it, its probably easier to buy a gun in US than a radio here.

73,
daniel

I'm happy to announce that the QRZ Anonymous FTP server is now online.

We will be archiving all the major amateur radio data files and will offer 24-hour ftp services worldwide. Presently, the entire contents (less the callbook files) of the QRZ Ham Radio CDROM are online and available for downloading.

We're actively soliciting for contributions, uploads, etc. so if you have any interesting amateur radio related material to share then please ftp it over to us. Worthwile items will be included on the next edition of the QRZ CDROM, due out this winter.

To reach us, just ftp to: ftp.qrz.com

Feel free to go to the /qrz directory and have a look around.

73,

-fred

Hi Bruce,
Name here is Sonny (Ka1esg) in New Bedford, Ma. Those guys were not pulling your leg. There is such an organization, and they usually have them at the Ham Radio Conventions. It's suppose to be like a horror story and if you sit through it all at the end they will give you a secret password. The meetings are always held at midnight in a very dark room. It was fun although I have only been once and that was many years ago. If you get to Dayton I am sure they will have one there, or if your in my area next weekend they have a Convention in Boxboro, Mass. which is not too far from Boston, and I know for sure they will have it there. Wish I could tell you more, but it's all a secret. Hi Hi. Take one in and find out for yourself. 73 and if you care to respond my e-mail address is

So you get last year's Repeater Directory as a freebie and automatically condemn the whole League? Aren't you jumping the gun a little? There's a lot more to the organization that their new member giveaways.

From the perspective of having been a member since 1956, I can tell you that if you add up all the benefits and services they provide, you'll do a lot better than a repeater directory, particularly if you actively participate by regularly letting your Director and Assistant Director know your point of view on the various issues concerning amateur radio.

N5MEI asks about experiences with Tucker Electronics. I have been dealing with WM5G and company now for a couple of months, and there have been some problems with equipment they furnished.

I can't say enough about Jim and his folks at Tucker. They appear to really have the customer as their first priority and their actions prove that to me. They are easy to communicate with, always polite and never seem to have that "I'm too busy to worry about you" attitude that seems so prevalent these days. They have literally "fell over themselves" working to mitigate the equipment problems.

I'm favorably impressed with Tucker Electronics.

>Tnx.

From what I have heard and understand, it doesn't really matter which side you connect the center conductor to. I usually connect it to the side with the gap. The ferrite bead(s) or choke coil of coax right near the feedpoint "isolates" the coax feedline outside of its shield from the antenna (twinlead) anyway. Same thing when you do a coil of coax feedline into a wire dipole.

Quoting from the The ARRL Repeater Directory, 1994 - 1995 edition, page 25:

Regional Frequency Coordination

The ARRL supports regional frequency coordination efforts by amateur groups. Band plans published in The ARRL Repeater Directory are recommendations based on a consensus as to good amateur operating practice on a nationwide basis. In some cases, however, local conditions may dictate a variation from the national band plan. In these cases, the written determination of the regional coordinating body shall prevail and be considered good amateur operating practice in that region.

End quote.

This same paragraph was also in the 1993 - 1994 edition, also on page 25. I'm pretty sure it was also in the 1992 - 1993 edition, but I gave my copy of that one away, so I don't have it handy to confirm that.

The magnetos I used to work on had metal casings - this would help shield
interfering EM radiation.

AFAIK, there are two types of aircraft ignition systems using magnetos -
high tension and low tension. The former generates a high voltage at the
magneto, while the latter generates a low voltage at the magneto and uses
transformers at *every* plug to convert this to high voltage. I've not seen
many of the latter type!

Grounding in aircraft is way ahead of that used in ground vehicles. All
metallic surfaces are electrically bonded together - usually by short wires.
Even the moving control surfaces, oleo legs, etc., are treated this way.
The reason is primarily because of static discharge and lightning protection,
but it sure helps for the radio side of things, too.

In Australia, aircraft COMMS made the switch to ssb over a couple of years
during the early '80s. (HF, anyway - I cannot remeber about the vhf part).
I remember being an apprentice working on the "ssb mod." on one of our
F-27's. Unfortunately, it was very early on, and I was just learning about
radio, and my job was terminating a lot of control/power wires - that's why
I'm not fully versed in all that happened during the mod.!

We had one old F-27 that was moth-balled, and this somehow "slipped
thru the cracks" for the mod's. We lined up a buyer for it, and finally it
looked like we'd get it off our hands ... then one of our guys realised
that it couldn't fly because it didn't have ssb!

> Just kidding. You mean furlongs, right?

Sorry, everyone, my little formula was incomplete. Of course, it
should be distance to the "radio horizon" IN MILES = the square root
of twice the antenna height in feet. If the other station's antenna is
elevated (as is usually the case) you just do the calculation twice, once
for each station, and sum the "radio horizon" distances. My apologies for
the omission.

Mike, N4PDY

: Give it a try and have fun with DX during band openings!! 73 de WB4IUY

This should be a whole lot of fun when the band opens;-) The simplex users on 29.5 are dumped out on the nation-wide simplex frequency of 29.6. Too bad the fellows on 29.6 can't talk back to the guys on 29.5 simplex....

Why not operate on a repeater frequency? They can't all be in use in your area...Use your regional pl tone during band openings and you would be surprised how well it works. Have fun...

From: beers@Xenon.Stanford.EDU
Message-ID: <361uia$h06@Times.Stanford.EDU>
Source record: 259705

2-3 years ago, I worked on the callsign project to keep the callsign servers on the net up-to-date. Since then, I've fallen out of the loop on things so I'm no longer sure what's happening with it. Can anybody summarize to me what's up currently with the callsign project? Are the online databases still being updated by this effort?

Email replies are appreciated. Thanks!

(from various peoples)

>It's due to a simple fact that AM preceded FM and that AM is what
>was available when airplanes began using radios.

obviously, this is the big reason. Much the same way the computer industry has to work to run 1983 MS-DOS applications on the modern super PC just because there might be someone that really wants to run some program of that vintage.

>I think the best answer so far was that FM's capture effect would
>be detrimental, if not dangerous, to air-ground comms.

this is the second reason and the reason why today you don't see a change. having 2 calls at once is one of the things a controller will tell you happens regularly. stuck microphones are another (when the pro line II radios came out with the stuck mic timer, we (my employer) received a good number of very nice and extremely positive comments about it. we probably should have it on ham HTs and mobiles as well...8))

>It still has little to do with FM capture effect. It's purely economic.

nope. retrofit was the salvation for a good part of the business in the 80's. people wanted the new radios with the new diagnostic stuff in 'em and all that but they have to work with the old system. and w/o stuck microphone timers, a aircraft with a stuck transmitter next to the antenna farm at the airport could stop all communications in their tracks...

>How old is the average airplane? How old is the average car that uses
>land-mobile radio service? And how much $$ does an aircraft radio cost
>compared to one suitable for a car? And typically it's the government
>user that uses land-mobile radio services who can decide to spend the
>$$$ because it's only tax dollars they are spending, not their own personal
>dollars.

aircraft are generally flown until something makes them unable to fly. virtually everything on the airplane is replaceable so you get the 20 year old ax that's had 17 handles and 6 heads...so unless something breaks that's not replaceable or is truly expensive, it'll generally be fixed and the aircraft put back into service. We still make some 30 (40??) year old stuff because for the customer there is no replacement and he can't afford to recertify the aircraft to move into the modern equipment. Believe that's also true at Honeywell and AlliedSignal (the competition).

sometimes you can do a retrofit and we've also made new equipment that was functionally interchangeable with the old equipment (such as the VHF-21 replacing the VHF-20()).

landmobiles aren't TSOed. g'wan. bet the Moto radio software won't pass DO-178. and it probably won't make DO-160C on environmental. and they don't see extremes of environments in normal operation (where your radio would be mounted in a wheel well, in the baking sun, then quickly elevated to 30K feet and really cold for a couple of hours and then back to sea level and +95 ambient again...

the staute of repose bill was signed by Clinton (gee, he's not _all_ bad..8)) so that's going to be working it's way into the system..maybe aircraft will again be able to be sold w/o having thousands of dollars of liability insurance for the manufacturer built in to the price...and then we'll start seeing new aircraft again.

4617. VEC in or around Chicago

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-24 21:09:21 UTC
From: m-atkinson@nwu.edu
Message-ID: <3624i1$s5e@news.acns.nwu.edu>
Source record: 259710

Howdy,

I'm trying to find a VEC in or near Chicago (pref. near Roger's Park). The VEC listed in my Gordon West No-Code Plus book, the Great Lakes Amateur Radio Club, appears to have its telephone disconnected. I was told to try the Ham Radio Club at DeVry in the loop. Their answering machine states that they test on the first Saturday of each month, and that for more info I can call the Great Lakes Amateur Radio Club (!).

I've left two messages with the DeVry answering machine and not gotten a response. I want to take the (no code tech.) test this coming Saturday, 1 Oct. I can find their address if I have to. But what I really need to know is 1) will they be there and 2) what kind of donuts they want :-).

If you know somebody in either club who can help me, if you know another VEC around here, or if you have other info that can help, please either email or post.

The San Diego Section of the American Radio Relay League (ARRL),
will be hosting the 3rd annual Ham Radio Roundup on Sunday October
2nd, 1994 at Convair Missle Park located at Clairemont Mesa Blvd
and Missle Rd. All licensed Amateur Radio operators and their
guests are invited to attend from 10 am until 3pm.
Many agencies have been invited to demonstrate what they will
provide during disasters, both natural, and man made. The Red
Cross, California Department of Forestry (CDF), Civil Air Patrol
(CAP), Office of Emergency Management (OEM), as well as
representatives from the medical, and military disaster operation
teams have all been invited. Also on hand will be personnel from
the Amateur Radio Emergency Service (ARES), the Radio Amateur Civil
Emergency Service (RACES), various local clubs, and also the ARRL.
Talk in frequencies will be 147.480 (s), 224.900 -(107.2), and
447.325 - (107.2). For further info, contact:
1540.

The 3-Hr Ap Indices for 22 SEP 94 are: 6 5 1 2 1 4 4 5
Greater than 2 MeV Electron Fluence for 23 SEP is: 7.0E+06

SYNOPSIS OF ACTIVITY

Solar activity was very low. No flares were observed. A
filament near Region 7779 (N17W69) was observed to erupt from
23/1300Z to 1354Z. Region 7781 (S08W07) is growing slowly.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field was quiet.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled becoming unsettled to active
by the end of the forecast period due to a coronal hole.

Event probabilities 24 sep-26 sep

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 24 sep-26 sep

A. Middle Latitudes
Active 10/30/30
Minor Storm 05/20/20
Major-Severe Storm 01/15/15

B. High Latitudes
Active 10/25/25
Minor Storm 05/25/25
Major-Severe Storm 01/20/20

HF propagation conditions continued near-normal over all
regions, although the weakened state of the ionosphere is
resulting in reduced MUFs. Similar conditions are expected
over the next day or two. Effects of a well-placed coronal
hole could begin degrading high and polar path propagation
anytime now. The most serious degradation is expected on 25
and 26 September.

------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

PA QSO PARTY NEWS #3

After all those contacts with Pennsylvania stations, you can apply for 2 operating awards. Both PA and out-of-state hams may apply for them.

Nittany ARC sponsors an award for confirmed contacts with all 67 counties in Pennsylvania. QSL cards are required. The award is also offered in different classes for fewer counties confirmed. For complete award rules and application procedures, write to Awards Manager, Nittany ARC, PO Box 614, State College, PA 16804-0614, or send packet mail to K3CM @ W3YA.PA.

Harrisburg RAC sponsors the Pennsylvania Keystone Award for direct 2-way contacts with 100 different PA ham stations. The award can be endorsed annually. QSL cards are not required. No retransmitted contacts may be counted. For complete award rules and information on required log extracts, write to Award Manager Mark Robinson WB3JIS, 1235 Middletown Road, Hummelstown, PA 17036-8929.

FINALLY, someome that speaks the real truth -- The dirty little secret
of repeater ownership/trusteeship. Gross in SoCal, but occurs other
places too. In direct violation of the spirit of amateur radio,
repeater pairs in many cases are being sold for big money, and the
coordinating bodies are (knowingly or unknowingly) cartels to support
this behavior. You want a repeater in SoCal? Easy, pony up $10,000.
There are plenty of frequencies, especially on the 440 band.
Sure, they are all "taken", and most are listed as closed. A scan
reveals little activity across most of the band. The band is populated
with either "paper" repeaters or real junk boxes -- placeholders to
keep the pair out of the hand of those that want them to artificially
raise their value. Repeaters worth $150 (hardware value) are being
sold for 50x their value -- presumably because the "value of the
coordination" is so high. This is tantamount to selling of spectrum.
Where do the coordinating bodies come into this? They condone this.
How? By allowing transfers of coordinations between two private parties.
Why? Because coordinating bodies are run by repeater owners, each of
whom has a $10,000 stake in keeping the status quo. Do you think
they are going to change this and watch their $10,000 stake go to
$150? No way. TASMA (in So Cal) started to make noise about this,
and decided to start charging a fee and auditing for "paper"
repeaters. The repeater owners protested. Over $10/year? I
doubt it. They just don't want anyone mucking up the status quo.

The time has come for the coordinating bodies to get their act
together. Otherwise, the FCC and the Justice department are going
to get wind of this. Seems to me that this would fall quite
nicely under the RICO act (anti-racketeering and corruption statute).

The solution is simple. When a trusteeship changes, the
coordination goes away. People should be free to sell equipment,
but the coordination can't be sold. Equal opportunity should be given
to those who are new to the repeater game as someone who just
buys an existing box to the coordination process. If they want to share
the pair, that's fine too. But, then the "$10,000 value" goes way down.
Oh well. I would feel sorry, but this is AMATEUR radio.

> My recommendation for this repeater? Yank it off of the air. Unless
>it is going to do special things (ie: ACSSB, digital modes, etc.) We have
>too many now that do it already. We need the simplex frequencies for
>local comms.

This repeater is not operating within the accepted band plans, and thus
is not operating within the scope of "good amateur practice." Thus it is
illegal. Although the ARRL band plans are not perfect, the burden
of proof should reside on the renegade repeater owner that the machine's
choice of frequency meets with the approval of most of the affected
amateurs.

I understand your frustration. There was a piece on one of the TV news magazines" shows recently how covenants laid down by condominiums and homeowners associations are essentially forcing people to forfeit Constitutional rights. It sounds like something some hungry civil rights organization or Constitutional lawyer ought to look into.

On the lighter side, I have a ham friend who lives in a nice part of their city and while there were no zoning restrictions, his XYL regarded a tower and triband beam as something she considered... "not lovely" and she told him "NO!" Well, it seems that his XYL took a trip and while she was gone, my friend put up a 100 foot Rohn 45G with his new triband beam above the treetops. Oh... He painter the tower olive green. (As in "Army green.)

The XYL came home and for more than a month, she never noticed the tower, but when she did, of course she read my friend the riot act. After pointing out how long it took for her to realize it was there, what more could she say? She conceded and peace prevailed in their household.

I hope you are able to resolve your antenna battles as peacefully as my friend. As a word of encouragement, he was probably up against a tougher opponent. ;-)

4628. Does anyone use 2M AM?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-25 03:45:59 UTC
From: psthomas@nyx10.cs.du.edu
Message-ID: <362rpn$l5f@nyx10.cs.du.edu>
Source record: 259720

Hi,

Yes, this is a serious question :-). In October '92, I became the proud
owner of a Hallicrafters 2M AM radio (I forget the exact model number). At
any rate, the price was good, and I needed something to play with :-)

The only problem is that in the two years I've owned it, I've made
a whopping 0 QSOs with the thing.... barring a test-run that I made with
it, which was one-way.

Obviously, I'm not planning to get a "lot" of use out of the thing,
but I would like to know if anybody else has any experience with VHF AM.
Anybody want to confess?

Incidentally, I wouldn't mind picking up another older (tube-based)
2- or 6-meter radio, so if anyone has one collecting dust, feel free to
let me know :-)... particularly one that would do CW, but voice modes
are definately okay, too!

SYNOPSIS OF ACTIVITY

Solar activity was very low. No flares were observed.
Region 7781 (S07W20) continues to grow slowly.

Solar activity forecast: solar activity is expected to be
very low.

STD: A full-disk Yohkoh x-ray image has been appended to this
report. Slightly enhanced x-ray emissions are beginning to
become visible on the northeast limb near N06. The background
x-ray flux is also climbing steadily into the A-class range.

This is most likely attributed to slight but steady growth in
Region 7781.

The geomagnetic field was quiet to unsettled.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled.

Event probabilities 25 sep-27 sep

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 25 sep-27 sep

A. Middle Latitudes
Active 30/30/30
Minor Storm 15/15/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 25/25/25
Minor Storm 20/20/20
Major-Severe Storm 10/10/10

HF propagation conditions were normal over all regions.
Near-normal propagation should continue, although there is a
chance high and polar latitudes could see minor signal
degradation (particularly on night-sector paths) over the next
3 days due to possible (as yet, unseen) effects of a
transequatorial coronal hole.

Hey,

I'm currently awaiting the arrival of my technician license - am not affiliated with a club, or the ARRL yet [am waiting for my callsign to arrive in the mail] Can anyone recommend a source of information regarding hamfests in the Southern NJ/NY/Eastern PA area? I really like going to these things - but I just don't know how to find 'em.

For anyone living in NY, I heard about one tomorrow morning at the Lincoln High School in Yonkers, NY - and one in Queens, NY the following Sunday - if anyone has any info on either please feel free to mail me...thanx in advance

I'm looking for a manufacturer or distributor of inexpensive TV/CB
towers.

I'm looking for towers to mount lights on to illuminate our riding
arena. In the midwest (MI, OH) there were these inexpensive Rohn
look-alike towers that were used for TV & CB. Here in WA they are
non-existant. I need 6 to 9 of them, 20-30 feet tall. If anyone can
point me to a dealer or manufacturer, etc. I'd be grateful.

Hi Patrick--

I also have a 2 meter AM radio, a Gonset Communicator IV. I don't have any crystals for it yet, but I'm hoping to score a couple in a trade. There is a person out here locally who collects older AM tube sets. His name is Jim Beeson. He was selling some of his collection (duplicates) at our local ham fest last weekend. I was talking with him and he doesn't seem to have a power cord wired up for his Gonset Communicator IV's and he offered to trade me a crystal or two in exchange for him borrowing my power cord so he could duplicate it. Sounds like a deal that _I_ won't be passing up!

I want to get my Gonset on the air and maybe get my father-in-law going with an AM set, too. I don't think an informal 2m AM net will catch on here in Santa Rosa, but who knows?

>>heard of a youth amateur radio club. Does anyone know of any? Any information
>>would be appreciated.
>>Todd BROWNJEB@Delphi.com

>basically the problem is that everyone grows up. and there has been a serious
>lack of recruiting for folks under the age of 30 for whatever reason for a
>long time.

>you could be the first in a new organization. then again, you'll be in QCWA
>when you are 34 (in 2012) whereas i'll be 41 (in 1997) when i'm eligible.

Kenwood Radio had a program a few years ago to get youth
interested in ham radio called 'Kenwood Kids'. There were free items
for the clubs that sponsored youth groups, and even a few large radio
donations to some lucky clubs. The Virginia Beach Amateur Radio Club
(VBARC), in Va. Beach, Va. started a youth group at that time and it is
going strong! Many of the members are the sons and daughters of hams,
some had their calls before the group started, some got them after
joining the group. Some still don't have a call, but are trying. One of
the youngest members of the group, David KC4ZHU, got his call in 1991
when he was eight. I hope this helps a bit.

Subj: Re: Does anyone use 2M AM?

Patrick,

P> Yes, this is a serious question :-). In October '92, I became the proud
>owner of a Hallicrafters 2M AM radio (I forget the exact model number). At
>any rate, the price was good, and I needed something to play with :-)

(deleted)

P> Obviously, I'm not planning to get a "lot" of use out of the thing,
>but I would like to know if anybody else has any experience with VHF AM.
>Anybody want to confess?

I just bought a Hallicrafter SR-46 6M AM rig at the Virginia
Beach Hamfest. It says it puts out 65 Watts, but I have been told that
a previous owner only got 10 watts out of it. I won't say how much I
paid for it, but I will say, it does light up and the knobs turn! What
can I say, it looked lonely, and I thought I might as well use all my
limited band privileges I can get. I now have 2M FM phone and packet,
440 FM phone, and 6M AM phone. Only 23 cm and 220 left to go.

No Antenna yet so I haven't pressed the PTT. Is 6M AM vertical
or horizontal?

4638. Re: Restrictive Covenants: I can't have *any* antenna?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-25 07:24:16 UTC
From: linley@netcom.com
Message-ID: <linleyCwoCKG.22L@netcom.com>
Source record: 259578

The sad part about these covenants is that hams cannot seriously fight these through market forces. For each ham that walks away from a home sale due to antennae restrictions, there are plenty of non-hams who aren't bothered by the restriction. What we need is what Georgia has- a law exempting hams from any new covenants restricting amateur antennae.

Random thought:
Is antennas an acceptable substitute for antennae? I have to bite my tongue to remember to use the latter. It just feels weird to me.

The following is a QST

The numbers are in. Technician Class hams now outnumber everyone else. Also, another loss for the Morse Code. The Coast Guard is abandoning the mode entirely. These stories and more on the IARU Region 3 conference in Singapore on Newsline report number 893 coming your way right now!

(*****
HAM GROWTH

Technician class license holders outnumber General or any other by almost two to one. According to figures appearing in the September 15th issue of the W5YI Report newsletter, there are now 235,484 Technician class hams as compared to only 79,950 a decade ago. That's an increase of 194.5 percent over the past ten years with most of it probably coming in the two years since the FCC created the code-free Technician Class ticket.
Following behind the Technician class are the General with 124,589 today up from 116,804 ten years ago. That's a meager 6 point 7 percent growth rate. The Advanced class shows somewhat better figures. There were 97,804 Advanced class hams in 1984. There are 111,587 now, an increase of close to 15%.
And the Extra class has grown by a goodly margin. There are now 65,942 Extra class hams. In 1984 there were only 35,624. That's a decade of growth approaching 85%.
And least we forget the much maligned Novice Class ticket. A license that has shown very little in the way of growth since the Technician went to No-Code testing. In 1984 there were 80,461 holders of Novice class entry level licenses. Today the Novice sits at 93,797 although most of those coming into the hobby through the Novice class did so before codeless licensing came into being. None-the-less, a gain of close to 17% is more than reasonable over the ten years surveyed. If nothing else it says that the Novice class is far from the dead entity many predicted it would become.
But there is a bottom line to these figures and what it says

is very simple to understand. A decade ago most amateurs held General class or higher licenses. Today it is the No-Code Technician that is attracting the masses as both the point of entry to the service and a place to stay throughout ones life-long ham radio career.

(*****
NO OCEAN CODE

And speaking of no-code, another of the reasons that proponents of the mode point to, emergency communications at sea is going away. An article in the July issue of Ocean Voice magazine says that the United States Coast Guard will be terminating all weather and other broadcasts that use Morse Code as of July 1st, 1995. With the advent of the INMARSAT maritime communications and distress satellite system, the dependence on ocean going terrestrial communications has been steadily declining. As a result, in 1993 the Coast Guard closed down its famed 500 KHz distress calling frequency watch that had been monitored by the service for over seventy years.
Now, all other Morse Code services of the Coast Guard are going away. And, as a result, its more than likely that there will soon be little in the way of high frequency communications on board sea going vessels. For the many ham radio operators who have devoted their time to monitoring for Morse Code maritime emergency calls on the high frequency bands it means that the need for their knowledge of the code and their services as emergency communications providers is quickly coming to an end.

(*****
MARINE RADIO PROBLEMS

An engineer from the Denver Office has completed a fact finding trip dealing with inland maritime recreational communications. He reports numerous violations among coastal stations and recreational boats using VHF marine radios. While monitoring the Missouri River area, he found a fishing tournament being coordinated primarily by unlicensed marine radio operators.

(*****
KH PIRATE

And in the here-we-go-again department, word that the FCC's Honolulu office has closed down yet another unlicensed broadcast station operation. This one was found on 107.3 MHz and was operated by twin brothers in Kaneohe, Hawaii who openly admitted the illegal operation. In fact, they reportedly referred to themselves respectively as the station engineer and the on air DJ. Their pride of ownership will probably soon cost them some big bucks. The FCC is expected to issue a large fine, maybe even a twin fine in this case.
For those of you with score cards, this is the third bust of

unlicensed broadcast operations in Hawaii that we have reported in the past two months.

(*****
WHEN IT PAYS ENOUGH TO SELL THE VERY BEST

The Federal Communications Commission's Auction Team has received the Hammer Award "for reinventing government initiatives."
The Commission said that the award recognized that the auctions which were for narrowband Personal Communication Service spectrum and interactive video allocations served consumers by licensing new services faster, served the public by selling rights to the spectrum rather than giving it away, and served industry by getting licenses to those who value them most highly.
The FCC Auction Team includes employees who worked on allocation and auction rule making as well as the team that organized and carried out the actual auctions in late July.
After 47 rounds of bidding, the PCS auction earned more than 600 million dollars for the ten nationwide licenses being auctioned. An interactive video spectrum auction earned an additional 214 million dollars for 574 licenses that will be used for new broadcast services.
Vice President Al Gore made the award presentation.

(*****
IARU REGION 3 SHOWSIDE

As reported last week, Region 3 of the International Amateur Radio Union, the IARU met recently in Singapore. You already know the official decisions coming out of that conference, but what about the protocol of the gathering. Some say that the meetings of IARU Region 3 are the most impressive because of their ceremonial formality. After all, Oceanana and the Pacific Rim is made up of many peoples to whom formality is more than just custom. Its considered to be ritual rite. And that protocol is carried into the IARU meeting hall.
The pomp and circumstance of the Region 3 IARU meeting did not in any way interfere with the groups work. Those who were there say that it added to the magic that was accomplished at this Singapore meeting.
By the way, for those of you not aware, Jim Meachen, ZL2BHF did more than just report on this conference for Newsline. Jim was actually in Singapore in the capacity of a delegate. ZL2BHF happens to be the president of the New Zealand Amateur Radio Transmitting Society.

(*****
CHINA OSCAR NEWS

Still in ITU Region 3, word that the Tinghua University Amateur Radio Club in Beijing, China started its long-awaited

OSCAR-13 Mode B operation on Tuesday August 23rd signing onto the bird as BY1QH. The satellite ground station consists of a Yaesu FT-726R tribander, a Cushcraft AOP-1 system, a Kenpro KR-400RC azimuth and KR-500 elevation rotors, a Tokyo Hy-Power HL-120U 70cm amplifier, and a GaAsFET 2m preamp.
Uplink power is currently around 25 watts. The low power is due to a defective 70-cm power amplifier and a replacement for it as well as a broken Yaesu MH-1 mobile microphone are sought. Anyone who can help is asked to contact Rick, BZ1QL.

(*****
222 NOTES

The ARRL Executive Committee has ordered the filing of comments on petitions to the FCC. These from commercial interests, seeking changes in the status of the 220-MHz band. The contents of what the League will be saying inn its response has not been revealed.
In a related matter, the FCC has dismissed a petition to permit Novice operators phone operation in part of the 220-MHz band. The commission says that the 216 to 225 MHz range is under study. As such, changes in amateur usage that band would not be appropriate at this time.

(*****
CABANA APPOINTED CHIEF OF ASTRONAUT OFFICE

Marine Colonel Robert D. Cabana KC5HBV, has been appointed chief of the Johnson Space Center's Astronaut Office. Cabana replaces Navy Captain Robert L. "Hoot" Gibson, who was recently named to command STS-71. This will be the first United States Shuttle mission to dock with Russia's Mir space station.
Cabana is a veteran of three Shuttle flights, STS-41 in 1990, STS-53 in 1992, and STS-65 this past July. He served as pilot on his first two missions and as commander on the record-setting International Microgravity Laboratory-2 flight earlier this year. The changes were announced by David Leestma, who serves as director of Flight Crew Operations.

(*****
BALLOONING TO ABQ

KB5ZRV sez that he will be flying to Albuquerque, NM for the Kodak Albuquerque International Balloon Fiesta on October 7th. He has made arrangements to fly on a balloon and bringing a hand-held transceiver. He would like to go up with ATV gear but does not have a have a mini camera and transmitter. If you can help him with taking ATV gear drop Bruce a note via internet at KB5ZRV@AMSAT.ORG.

(*****
FCC-800

KB5ZRV also says that he recently spoke with the FCC and learned they have installed a nationwide toll free 800 line for Consumer Assistance for all branches of radio service. The number for the FCC Consumer Assistance Center is 1-800-322-1117.

(*****
WB6YMH GOES HIGH SPEED TELCO

One of the nations pioneer Packet Bulletin Boards is about to take a bold step in land based technology. Skip Hansen, WB6YMH, says that the well known Packet Radio Bulletin Board carrying his call sign will upgrade its facility to a minimum telephone access speed of 9600 baud. Hansen says that with 14.4k modems selling for less than $100 he has decided that the time has come to discontinue support of 1200 and 2400 baud operations.
According to WB6YMH, effective January 1, 1995, 9600 will be the minimum baud rate supported by this system. He says that it is not fair to the majority of users to wait hours and hours to get on the system because of the few who still insist on downloading 1 megabyte or larger files at 1200 baud.
For those of you not aware, WB6YMH was one of the earliest Packet Radio Bulletin Board systems to be established in the United States. Over the years it has been a test bed for much of the technological advancement in packet radio that has now spread worldwide.

(*****
DX

In DX, as summer is ending in the Northern Hemisphere, the Antarctica is getting its wake up call from a long winter. This also means there will be more activity from the bases in the Antarctica. The best times to be looking for them would be the early morning and mid evening hours. 8J1RL sez that he can sometimes be found on 20 meter CW between 11:30 and 14:00 UTC.

(*****
POSSUMTOWN PIGFEST

From the special events calender, word that the Mississippi based Louden Amateur Radio Club will operate KA5GMN this weekend, September 23rd to the 25th from 21:00 UTC to 03:00 UTC to celebrate the 12th annual Possumtown Pigfest. No, we are not kidding you. The group is going to celebrate the world of pigs with an on the air HAM radio operation. Sounds good to us.
You can find KA5GNM oinking along on 80 through 15 meters in the General class phone subband and on 10 meter Novice phone. For a certificate and commemorative QSL card send a 9' x 12" self addressed stamped envelope to L.O.C.O., Post Office Box 9291, Columbus, Mississippi 39705. And may we add good luck in the contest, and that this is one certificate that we at Newsline really want to see!

>thanks

I am not sure it is illegal but I have heard that the repeaters in Europe use a different scheme than we do here. Here we use one pl tone to access a repeater, (sub-audible tone that you must have installed in your radio to brind up the repeater). This means that a rig made for the US will have to have their type of tone encoder installed or you will not have access to their repeaters. You also need a operator license for any other country you might choose to use it in. We do have reciprocating agreements with other countries so many times you only need to notify that country and apply for a license there. Since you are not going to another country, don't worry about his question. Maybe he was just curious and wanted to go with you

This comment is baloney. I've developed hundreds of millions of $ worth
of residential properties all over the country over the past 20 years
and I have NEVER even talked to a cable TV company. The convenants are
put in because the buyers want them. Its very simple: it is what the
market wants not some sinister conspiracy. Sorry.

(This discussion belongs on .policy; followups redirected.)

Ken, don't tar all coordinating bodies with your broad brush. The Texas VHF-FM Society does not allow transfer of coordinations except from an individual to a club, and that only because many clubs had their repeaters coordinated by the individual trustees in the days when coordinations were always issued to individuals. We do not allow the practice you're complaining about. We also require trustees to renew coordinations annually, and have procedures in place for revoking a coordination if the repeater is in fact not on the air for over 90 days - but someone has to complain first.

I have no direct experience with coordinators in other areas, but we're not all bad.

4643. MFJ Service

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-25 14:14:09 UTC
From: palsson@ucssun1.sdsu.edu
Message-ID: <3640jh$1op@pandora.sdsu.edu>
Source record: 259583

Anyone ever tried to get a manual out of MFJ? About six weeks ago I called their 800 number and inquired about getting copies of two manuals --for their Artificial RF Ground and their Signal Enhancer II audio filter. I talked to a very helpful-sounding person, who took my name and address and informed me they would be sent free of charge, along with a copy of their current catalog. That was nice to hear, obviously, since I had said I would pay for them.

After four weeks, having received nothing, I followed up with a letter by fax mail, again offering to pay. That was two weeks ago; still nothing heard.

Is this typical of MFJ, or should I try again?

Well, Simon's view of things is, strictly speaking, correct. However, I'm
not sure of the value of his suggestion! I hate to say this, but I'm gonna,
anyhow: I'd be surprized if anyone who had passed the UK C&G examinations
for amateur radio found anything remotely difficult in the US tests. Except,
of course, the Part 97 stuff - you just gotta learn it :-)

> I'm not sure why anyone to want to do this anyway, but I suppose you
> could take all the theory exams in the right order, and then take the

> Or would they insist on giving you a no-code Tech license along the way?

Right. I think if you have all the bits and bobs to qualify for a license then
the VEC is BOUND (under FCC rulings) to ship them off and have the paper
issued to you. Not taking the Element 2 test would preclude this activity. But
then again, what of it? The FCC charges for upgraded licenses are set at a
rate that even *I* can afford :-)

> A local Brit who got tired of his long reciprocal call just went along

> should not be beyond the capability of the average True Brit.

I couldn't do this; lack of sleep/food/relaxation. I did 0 -> General on
Wednesday evening, and then the other bits the following Saturday morning.

You're right - it wasn't beyond my capability; just got caught on the wrong
day .....

4650. Question Pool Current?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-25 18:30:37 UTC
From: brettb@cruzio.com
Message-ID: <Cwp7F7.30I@cruzio.com>
Source record: 259612

I'm trying to prepare for the General and advanced. (Gasp! Gasp!)
It seems like that the question pools for the software at oakland
depository and some of the postings I've seen lately are NOT current,
at least if the latest book from Radio Shack is correct.

Shouldn't the current pool be labled G1A*** etc. for the General
rather than the old format? Any ideas where I can get some
current shareware? I like to take a mess of practice tests at the
keyboard before submitting to the *real thing*.

While I'm at it: is Supermorse the way to go for CW practice on the
computer?

HR AMSAT NEWS SERVICE BULLETIN 260.01 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 24, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-267.01

Weekly OSCAR Status Reports: 24-SEP-94

AO-13: Current Transponder Operating Schedule:
N QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Sep 12 - Dec 19
Mode-B : MA 30 to MA 150 |<- OFF Oct 22 - Nov 07 for eclipses
Mode-B : MA 150 to MA 190 | max duration 2h 12m
Mode-BS : MA 190 to MA 218 |
Mode-S : MA 218 to MA 220 |<- S beacon only
Mode-S : MA 220 to MA 230 |<- S transponder; B trsp. is OFF
Mode-B : MA 230 to MA 30 | Blon/Blat 230/0
Omnis : MA 250 to MA 140 | Move to attitude 180/0, Dec 19
The battery charge state is of paramount importance during the eclipse seasons. As always the command team may have to have to make temporary changes to the published schedule. In that case we will try to minimize the inconvenience, setting Mode-B OFF from MA 230-256 in the first instance.
==========
[G3RUH/DB2OS/VK5AGR]

AO-16: WD0E reports that as of 03:30 UTC 21-SEP-94 the AO-16 File Server is open and returned to general use. The AO-16 Command Team would like to thank everyone for their patience during this important "Preventive Maintenance" software reload. [WD0E].

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ N0QCU. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

4654. HT problem--help!!! Please!!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-25 19:08:19 UTC
From: jlw3@ritz.cec.wustl.edu
Message-ID: <364hr3$shc@ritz.cec.wustl.edu>
Source record: 259592
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I need some help here. I have an Icom W21AT whose external power jack no longer works. The HT works just fine by battery but does not power up when the external power is plugged in. I know that the adapter is ok. I know that the problem is with the HT. Anybody out there ever had problems with the external power jack failing? Anybody out there have suggestions on what I might look at?

What happened? The ht sustained a 4 foot fall onto carpet (it was also in it's little soft case). The radio was fine, but the tone card inside was kinda jarred loose. So I took the radio apart (via instruction manual instructions. However, although I turned off the power, I didn't disconnect the power cord. While removing the metal battery lead, I apparently shorted the battery terminal.

I found nothing to smell fried, and saw nothing unusually brown or black. Is this beyond simple search and repair? I'm having the schematics sent to me from home.

Thanks in advance for any help!!

>manuals (and the HP mauals are BIG) but they charge plenty for them.
>

Yes, Tucker's prices are way too high. A friend of mine who frequents
many hamfests tells me a good starting price for gear is "A tenth of Tucker".
Although, I feel that maybe a fifth of Tucker is probably closer
to the mark these days.
Tucker is even on the high end of some of the other commercial dealers.

As far as service goes, Tucker is very good. Sometimes when you need
something in a hurry, you just have to grit your teeth and pay the
premium.

I ordered two IC2SAT HTs from Tucker last Christmas. UPS lost them and made Tucker and me very mad. They had excellent customer service when I was working with them to remedy my situation. After UPS settled with Tucker, and the 2 HTs were shipped, one of them had a tuning problem on RX. I called Tucker and returned it to them. I had a new one within 5 days.

Some of their prices can be beat, so it pays to shop around, but that is true with everything today. I also recommend Ham Radio Outlet, especially their Denver store.

4657. AM Sensitivity Problem with TM-241A ??

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-25 21:44:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2E8570DF@smtp>
Source record: 259487

Deane,
its interesting you have this problem. I bought a TM241A about a year ago, and AM receive is really bad. However, reading in an article (I think it was in CQ) they said that AM sensitivity is bad thus you can only use it near airports etc.
Now you say your second 241A does not have this problem and I realised that there may be a change someone can do to improve AM sensitivity (perhaps Kenwood did the change for later models). I looked in the schematics and found nothing.
If you get answer on your question,please forward it.
Thanks,
Peter Vekinis, KC1QF

SB DX @ ALLBBS $OPDX.176
Ohio/Penn DX Bulletin No. 176

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 176
BID: $OPDX.176
September 26, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DX NEWS Letter, K4CEF & Southeastern Cluster group, G8XFT, JH2PDS/1, WA3RHW, KA3DBN, WB3JFS, K4UTE, W5KSI, W5ZPA, WD8IXE, N0BSH, AD1C and VE3UOL for the following DX information.

5V, TONGO. Baldur, DS6SI, is now active as 5V7DB. Most of his activity is on CW (with some RTTY) on 15, 17, 20, 30 and 40 meters. Apparently, the RTTY operator is DJ6JC and is traveling with Baldur. The QSL information is unclear at this time for RTTY contacts, they may go to DJ6JC (Listen for instructions). QSLs for CW and SSB go to DJ6SI. (Just a reminder! One green stamp is not enough to cover return postage from Germany.) The length of this operation is unknown at this time.

C2, NAURU. Ron, ZL1AMO, became active this past weekend as C21/ZL1AMO. He usually operates mainly CW and seems to favor 30 and 40 meters. His length of stay is unknown, but it is rumored he will be traveling to T31 next. QSL via CBA.

D6, COMOROS. JA1ELY, JA1ETQ, JA1IDY and JL1UXH are currently in the planning stage to be active from D6-land. No dates have been mentioned as of yet, but the group plans to be operational on CW, SSB, RTTY, SSTV, the satellites and on all bands. Stay tuned!

DX TIDBITS..... Effective October 1st, Selim, OE6EEG, will cease to be QSL Manager for the following stations: A71AL, HZ1MM, SU1AY, SU1ER, SU1RR, SU1SR, YI1DZ and 7Z1IS..... Kash, WB2RAJ, continues to communicate with Lou, ST2AA, and is trying to have Lou send the logs stateside for ST2AA and ST0K. Once the logs are received the cards will be printed. Please be patient. Meanwhile, Lou is off the air due to rig and commerical power problems.....

FR/G, GLORIOSO. Rumor from 256 Group is that FR/G tentatively is scheduled for December 1994 and again for July 1995. The operator on

FR/G will probably be Jacques, FR5ZU. It is believed he only operates on SSB nets, some RTTY but no CW.

IOTA NA-034. Steve, W4/YV5DTA, will be active October 3rd and 4th from Anna Maria Island, which is in the Flordia State West Group. The operation will only be on 20/15 meters and CW only. QSL to: Esteban J. Morao, 850 E. Commercial Blvd. # 131, Fort Lauderdale, FL 33334.

J6, ST. LUCIA. Several Southwest Ohio DX Association members will return to St. Lucia for a CQWW SSB contest DXpedition. Activity will begin October 22nd and last for 2 weeks (November 5th). Operations will be on 160-10 meters (including WARC bands) on CW, SSB, and RTTY. This is the first SSB contest effort (multi/multi class) by the J6DX crew who won the 1993 CQWW CW in the multi/single class. J6DX or some other special calls will be used during the contest period. QSL contest QSOs via N9AG. Individual callsigns/QSL routes will be used outside the contest.

PJ7/PJ8, ST. MAARTEN. Jim/KI4HN, Scott/KA9FOX, and Mike/N0BSH will be active from October 25th to November 1st. The group plans to operate signing PJ8Z as a multi-single entry in CQ WW SSB. Operators will will sign PJ7/ before and after the contest. Activity will be on 160-10 meters including the WARC bands. KA9FOX and N0BSH will also spend a couple days in KP4-land after the contest. QSL all calls via KA9FOX.

SY1MF IS NOT MOUNT ATHOS. Several have asked about the location of SY1MF. According to several on Internet who have worked him, he is NOT in Mt. Athos. The callsign is actually in use by SV1MF who is on an IOTA expedition to Salamis (EU-075), one of the Greek Islands in the Peloponnisos East Group. Thus, Monk Apollo appears to be the only active station from Mt. Athos.

V3, BELIZE. Operators Mike/W5ZPA, John/KV5E, Nellie/XE1CI and Stan/W5JYK will be active October 4-7th, from Ambergris Caye (IOTA NA-073), signing V31MP, V31JY, V31CK and V31YK respectively. The team will try to have three stations on the air, if possible. They will be on all usual DX frequencies operating CW, SSB and RTTY. QSL to each home call with SASE.

VP5, TURKS AND CAICOS ISLANDS. Tom/K2TD, Jack/N2VW and Mike/WB2YOF will be operating as VP5R, a multi-single entry in the CQWW SSB Contest on all bands during the contest. Before and after the contest, from October 25 through November 1, they will be signing VP5/home call, emphasizing CW and the new bands. QSL VP5/call via home calls, and VP5R via N2VW, via the bureau, or direct with SASE or SAE and return postage. (Please note that VP5R is re-issued; QSL this operation only via N2VW).
Also, there will be a group from the Florida DX Association to return to VP5 (Providenciales) NA-02 to participate in the CQWW SSB Contest. The operators will sign /VP5 before and after the contest while signing VP5Y during the contest. Look for operators: Steve/AB4UF, John/AC4ET, Dick/K4UTE, Bill/KQ4GC, Ron/N4KE, Mike/NF4L, Jim/NU4Y and AL/W3ZNB. All QSLs go to K4UTE (Please do not send bureau cards to VP5 bureau!).

VP8, FALKLAND ISLANDS. Jon, G8XFT, will be active from Mt. Kent in the Falkland Islands from October 18th until approximately February 20, 1995. His activities will be on all HF bands plus 2m and 70cm on all voice modes. He hopes to be active also on Packet, Amtor and RTTY. He does not plan any CW operations, although he stated an occasional slow morse contact may be possible if requested. Jon is currently in the process of setting up a P.O. Box to receive QSLs and will publish the address at a later date.

UA0, STOLBOVOY ISLAND. Sanyi is currently signing UA0QJG/0 and can usually be found on 20 meters CW between 1130 and 1300z on/or around 14003 kHz. Stolbovoy is located in the Lyakhovskiye Island group and has an IOTA number of AS-029. QSL via UA1AGC.

XY, MYANMAR (BURMA) UPDATE. Robert, K4MZU, had a chat with Ray HS0AC on September 21st and Ray indicated that JA1UT, himself and a few others did complete the SSTV demo with Burma Authorities a few days ago. They made several contacts throughout SE Asia using the call XY1HT for 2 days. No remarks were made regarding final outcome and further operations, but looks like some progress is being made.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

(Stuff deleted)

: Is this typical of MFJ, or should I try again?

Probably you should try again. Hard to figure with MFJ. When I told my local ham dealer I ordered a QRP rig from them directly and that MFJ indicated it would be about four weeks for delivery, they laughed, indicating it would be fortunate if I got the rig within my lifetime. In fact, the rig arrived in less than four weeks.

Later, I called to complain about the excessive VFO drift. MFJ told me they knew about it, and would be happy to send me a set of upgraded VFO caps once they arrived at the factory from back order. Well, about 12 weeks later, with no follow-up calls, I did indeed receive the caps free of charge. I won't dwell on the fact that they were mailed in a regular business envelope, and were half sticking out of the latter. The postman, poor bugger, probably had to get a tetanus booster.

This is mainly for the benefit of QRPers who dropped out of the QRP mailing list when it changed homes and lost the daily digest function. Many people expressed interest, and I am trying to spread the word in various ways to catch some of them, but there may be some folks on this newsgroup who are also interested.

A while back ago I said I was considering making some reprints of The Milliwatt (National Journal of QRPp), which was a QRP journal started jointly by me and Adrian Weiss (W0RSP) in 1970 (although he did the VAST majority of the work, and I deserted him early on, to join USAF). I finally decided to go ahead with it when I found a partner, and am now taking advance orders. (We are taking money and orders and will then go to the printer and order exactly what we need. We are NOT going to stock any copies for future sales.) This is a non-profit operation, by the way. Here is the posting that I sent out on the QRP mailing list:

We have decided to go ahead with the (non-profit) reprints of The Milliwatt. Neither my partner nor I can front the money for this, which will be quite a few hundred dollars if everyone who expressed interest places an order, so we must take orders in advance. The cost is $22 US dollars "postpaid" in the US and Canada. (UPS will be used wherever possible.) If anyone outside the US wants to order a set, contact me and we'll see if we can work out some method of payment. My partner told me it will be an extra $2.50 for surface shipment, $11 extra for air.

I will accept orders for about two weeks, and then give my partner the go-ahead to go to the printer. They will be shipped from Ohio. I don't know how long the printing will take, but we should have things on the way in about a month (guess).

[***This was sent out a while back; I will accept orders for about another week and a half.***]

Please make the $22 (US dollars) checks or money orders out to Michael A. Czuhajewski, and write "Milliwatt reprints" somewhere on them. Send them to me at 7945 Citadel Drive, Severn, MD 21144. (Do NOT make them payable to Milliwatt Reprints.) Please include a street address so we can use UPS; if you absolutely cannot give a street address, we will (reluctantly) use the US postal service.

Whether we actually go ahead with this or return all the money depends on the number of orders received. The price was based on the cost the printer gave us for 50 copies. If we have to order substantially fewer, the cost per piece will be higher; charging $22

allows us some cushion for higher printing costs, so we have to play this one by ear.

If you decide to order a copy, please send me an e-mail to let me know, and I'll get back to you if it never arrives. If you procrastinate for a while and are near the deadline for ordering, don't worry about it too much; just send an e-mail and drop the check in the mail. My partner said the printer will give us 30 days to pay so we have some leeway.

THE FINE PRINT

As previously stated, this is a non-profit photocopy reprinting of the Milliwatt, priced high enough so that all reasonably expected expenses will be covered, along with a comfortable cushion to cover unexpected ones. Money remaining after all expenses are covered will donated to one or more regional/local QRP groups of our choice (with the Maryland Milliwatts specifically excluded, of course--conflict of interest).

This is a photocopying reprinting of material published between 1970 and 1975; although it is in the same format as SPRAT, The Five Watter and QRPp, do not expect the same quality; it was published back in the good old days when things where typed up and pasted on paper and offset printed; computer technology was years away from widespread use, and laser printers existed only in science fiction. The original set of "master copies" were made by slapping the magazines open-faced on a copier; you will have to turn the book sideways to read it.

These are also second generation photocopies, although the last two sets I did myself a couple years ago turned out well. This time around they will be printed on both sides of the paper--that cuts it down from 360 sheets to a mere 180 sheets. Bill tells me they will be bound into two volumes of 90 sheets each, with comb binders and heavy (card stock) covers.

I am doing this project together with N8ET, Bill Kelsey of Kanga US (who is doing this is a private citizen, not as a company project). Both of us are fairly well known in the QRP community; Bill has been running Kanga US for several years, and I've been writing for the QRP Quarterly--articles and a column--for years. If you're still a bit concerned about sending money in advance, I'm sure that scams done via Internet/USENET fall under federal wire fraud statutes, so even if we do run off to Rio with your money they'll extradite us and throw us in the slammer!

We'll be making a very few extra copies, but don't count on being able to get one. We are not going to stock any for future sales, although we may do this again if there is enough interest.

Any fox hunters out there? I'd like to get some suggestions as to current equipment offerings. I've heard about something from BMG, also a company called Vector something. Any comments on what works well? Tnx...

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc,rec.radio.cb

My friend has a CB radio that works fine - when his computer is off. When he turns the computer and monitor on, the static and hiss level on his radio go way up, making transmissions very hard to hear and some almost indiscernable.

Questions:
How can we get rid of this?
1) Would something like a lead box around the actual CB radio eliminate this?
2) Would a lead box around the computer eliminate this?
3) Is it the antenna's fault (we're using a homemade 1/2 wave dipole mounted vertically)?
4) Any suggestions as to where I can find sheets of lead (if that's the answer) and how to put it up?

The interference is not coming specifically from the monitor or computer, but both.

Is the interference (apparently caused by electro-magnetic fields from the monitor and computer, right?) getting picked up by the antenna, the radio itself, or both?

Thanks for any help!

In a previous article, bjcraw@raven.csrv.uidaho.edu (S-JEvans) says:

>The other night I heard this guy yakking on the bands about some wierd
>C&W type songs out on CD about us Hams (one of the titles he mentioned
>was "Radio Widows") any one know anything about this??? (like a name??
>title??, callsign???)

The guy you are referring to is Andrew Huddleston of Denmark who has "The Ham Band" (what else?). He is G3WZZ/OZ1XJ/3D2AH/ZK1XW and is a professional musician who has released 6 CDs with his wife Lissa.

They recorded a CD full of songs called CQ about ham radio with titles such as:
On the Monday Evening Grayline
The Radio Widow
I'm Not Climbing Up the Tower Anymore
The Contest
...and others.

There are 12 songs in all, played by some veteran Nashville sidemen.

I haven't heard the music but I did get a press release from him.

The only info I have is:

Andrew J. Huddleston
Mollestein 53
DK-8000 Aarhus C
Denmark

Tel. +45 86 130632
Fax +45 86 191980

Hope this helps you and others who might be interested in trying this offering. Must be pretty unique and maybe not a bad acquisition for C&W-loving hams.

Rob

Russ, my guess is that the interference is being radiated from the computer or monitor to the antenna or feed line. The cheapest thing to do might be to separate the computer from the feedline and antenna as much a possible. Have you tried turning off only the monitor to see if the noise subsides? I know from some past experience that monitors can generate a lot of noise, but sometimes only when there is a certain type of picture on the screen, making it seem like both the computer and monitor are actually generating the noise (since the computer is what puts the picture on the screen). If you decide to build a shielded box, you don't need to use lead. Aluminum will probably work fine, as might a metallic screen mesh, or even some al. foil, at least at first to see if it has any effect. Also consider the possibility of radiation from the cables interconnecting the computer and monitor. Make it as short as possible, or at least coil up the slack tightly. If you suspect that the radiation is getting directly into the radio, you can disconnect the feedline and see if the noise persists. If the noise disappears when you disconnect the line, then its coming from the line or antenna. You could also leave the line connected to the rig and disconnect the antenna and see what happens.

Good luck.

I would appreciate any technical information for the following two radios. Also any restoring information, parts, restoring procedures for the RCA as it is from the 30's. The wire is cotton but mostly bare. There are no missing parts but I understand not to turn the radio on until all the electrolytic capacitors have been replaced. Ditto for all the wires. Any information would be helpful.
.

RCA Victor 'cathedral' top, tube table radio chassis model 121 . This is an AM and short wave radio.

Zenith TransOceanic model 1000-1. This radio is in great condition but could use some contact cleaner on the switches and additional cleaning. The aluminum chassis has some 'spots' on it, like corrosion. Simple
green
and a tooth brush cleaned up the outside and knobs.

Thanks ... Bill

Yes. The intent is very clear. The intent is to prohibit all forms of decent TV reception leaving you no choice but to subscribe to the local cable TV monopoly. You have no problem with this? I find this type of restriction akin to, "No automobiles (excluding Mercedes') shall be parked so as to be visible from the street or adjoining property." Of course, no one is forcing you to have a car (or watch TV), right? The language of the restriction is squarely focused on antennas receiving entertainment media and not amateur communications. You paint the frightening image that all judges could care less about the wording of a contract and rule based upon litigant's tactics and attitude rather than the law. Even if it were decided that you were wasting the court's time, that is an independent ruling and has no bearing on initial case you brought in.

>Again, nonsense. Complete nonsense as far as real life attorneys and
>judges that I have met. Your point about money for them is well taken,
>however, you had better have a good argument if you are about to take
>the time, money and effort to invest in such a thing. I wouldn't take
>this direction suggested, it is a waste of time.

Loopholes do not get cast aside just because some courts find them irritating. Legal contracts have to be excruciatingly precise or they're worthless. A good lawyer (unaffordable by most) can take advantage of loopholes (though, the case may take years to reach completion). In quite a few instances, restrictive CC&Rs have been declared null and void due to a lack of (or uneven) enforcement of the restrictions. Please check your facts before saying loopholes don't work in real courtrooms. And do not discourage people from fighting unfair practices because "they'll always lose." The little guy is right sometimes.

I have to say I disagree. Though I don't use a "standard" method of charging mine, a typical charge session of 4 AA cells gets the total voltage of nearly-new and very good batteries to a peak of 6.17 volts before it eventually (the few times I forget to stop the charge after the dip) drops to 5.76 volts and stays there.

My usual charging method is sine-wave power, 0.5C forward and 0.05C reverse on alternating half-cycles of 60 Hz AC. (Slight imperfections in waveshape should be uneventful; due to diodes.) I have observed the dip using only 0.75C forward pulses with no load.

Well it depends. Here at the AT-Centre we use paired VHF-UHF frequencies,
which multicast upon demand. This is done for civil/military coordination.
It will however be from a human standpoint impossible. If it's busy, then it
takes a lot from the controller to listen to both frequencies together.
But then, the militaries don't use these frequencies, because they have their
own ATC's.

14.070 MHz (amtor/fec) 0030 UTC VK2DPM (Alan)
14.091 MHz 0030 UTC VK2BQS (JIM)
146.675 MHz 0030/0930 UTC VK2JPA (PAT)
144.850 MHz (ax25 bbs) VK2JPA AT VK2RWI
(or VK2AAB)
146.675 MHz (rtty mmbbs/repeater) VK2RTY

And now ... what you've all been waiting for

ANARTS WW RTTY Contest 1994 Results
-----------------------------------

The results of the ANARTS 1994 WW RTTY Contest are to hand and
extracts are published hereunder. The full result sheets will
be despatched to all contestants, various RTTY Societies and
Amateur magazines both in Australia and overseas. The posting
will be dalayed for about a week until all Certificates are
prepared for inclusion where appropriate, oreoaration of the
Plaques will probably take another month before final
despatch.

WORLD PLACE-GETTERS ARE:
------------------------
Classification A: Single Operator

1. VK2KM 3,765,325 Points Plaque and Certificate
2. SV2BFN 1,978,530 Certificate
3. JR5JAQ 1,802,920 Certificate

Classification B: Multi Operator

1. VE3FJB 441,965 Points Plaque and Certificate
2. LY1BZB 57,728 Certificate

Classification C: S.W.L.

1. ONL383 260,790 Points Plaque and Certificate
2. ONL4335 118,550 Certificate
3. ONL3997 47,244 Certificate
```

In addition:

There were 46 Certificates issued for 1st, 2nd or 3rd places in DXCC countries or Areas as specified in the rules.

Matters of interest:

Subsequent to information provided by N6GG it was found that typos had flawed the original issue of the Points Exchange Table. This has been revised (1994) and future contestants should ensure they use issues so marked.

There were eighteen VKs recorded during the contest, but only six of these submitted logs. This is a pity because our standing overseas is enhanced when VKs are seen to be participating in what after all, is OUR contest.

Rules, Log-Sheet, Summary Sheet and 1994 Exchange Table are now available for the 1995 Contest to be held 10-11th June 1995, a request to the Contest Manager at Box 93, TOONGABBIE NSW 2146 with an SASE will give you a copy of these items which you may photocopy as required.

Comments from contestants:

SV2BFN A lot of QRN and someone stole 10 meters, only two QSOs ...
JR5JAQ Tnx fine contest, cond not so good but see you next year.
VE7SAY Maybe next year the bands will be better, cu next year es tnx for the QSO
GW4KHQ Pleased to work at least one VK. I hope to improve on antennas by next year.
VK2GOM I did not operate for long as was in the throes of putting up a tower/beam. Next year will be a different story...
SP6CYV CU in ANARTS 1995 ...
W9FFQ Again this year condx were very poor here. Heard no JAs and only one African, even USA rather scarce.
Enjoyed the contest.

GEOMAGNETIC: QUIET TO UNSETTLED, WITH POSSIBLE ACTIVE LEVELS 26-27 SEPTEMBER.

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES TO SLIGHTLY ENHANCED.

COURTESY OF IPS RADIO AND SPACE SERVICES, SYDNEY

Apologies, but this week's VK2SG RTTY DX Notes have not arrived in time for the broadcast. We are trying to make alternative arrangements but a gateway failure has upset those plans for this week.

ARLD057 DX news

The irems in this week's bulletin are courtesy of Chod, VP2ML, Tedd, KB8NW, Joe, NJ1Q, the Ohio/Penn DX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST. Thanks.

SOUTHERN SUDAN. John, PA3CXC, was on the air from Monday, September 19, to Friday the 23rd, then moves on to Angola for two months. John prefers CW at around 25 kHz up.

EUROPA UPDATE. FR5HG/E continues to be very active, especially on 40 meter CW. The operator has also been checking into the French DXNet. This operator sends very fast CW and could possibly be a professional radio operator. Michel, FR5HG, plans to sign /E for a 45 day stay. Activity

will include CW, SSB and RTTY. QSL via F6FNU.

SOUTH GEORGIA ISLAND DXPEDITION UPDATE. Vince, K5VT, has joined the team of operators which includes WA3YVN and WA4WQD. The group will operate three HF stations, all bands, CW, SSB and RTTY. Word has it that they are well equipped for low and WARC band operation. Equipment was put aboard the Research Vessel ABEL J in June and is expected to arrive in the Falklands around October 8. The team will arrive in the Falklands on December 23 and plan to operate the low bands and the WARC bands for about five days while awaiting departure for SGI.

FEDERATED STATES OF MICRONESIA. Kazu, JA0VSH, and his wife Miyuki, JG0PBJ, will be on the air from Pohnpei October 1 to 10 signing V63KZ and V63MP, respectively. Listen for them on CW and SSB on 160 through 10 meters. During their evening hours, only CW will be used. Miyuki is a very new DXer, so please be patient. QSL via CBA or the JARL bureau.

LAOS. Gaby, XE2GV, is expected to be active soon as XW8KPL. His length of stay is unknown. Listen for him on 20 and 40 meters, SSB only.

ZAMBIA. Brian, 9J2BO, has been active signing 9I30ZIN, as Zambians celebrate 30 years of independence.

ANGOLA. Kjell, SM7DZZ, will sign D2ZZ starting September 22 for about 10 days. He prefers CW and the low bands. Sometime around the middle of October, Kjell will be on from Namibia as V51/SM7DZZ. And later this year he will be return to Mozambique to operate as C91Z. QSL via his CBA.

NAMIBIA. Pete, N0AFW, will be heading up a group of five operators to be active in the CQ WW SSB Contest. They will arrive on October 24 and depart on November 6. Operators include N9NS, AH9C, WA0PUJ, NH6UY and host V51GB. The contest callsign will be V59T, and outside the contest the operators will use their own call signs /V51. Some satellite g ar will be brought along. QSL all via WA2FIJ.

HONDURAS. Ernesto, HR1ERL, will be signing HQ1T for the next two months and will be active on several nets. QSL via HR1FC.

CAYMAN ISLANDS. Mark, N7MCA, and Ron, WJ7R, will be active as ZF2MC in the CQ WW SSB Contest October 29 and 30. Outside of contest hours, ZF2MC will operate mostly SSB on the low bands and ZF2RV will be on CW. There is a chance of some RTTY and AMTOR operating. QSL ZF2RV/ZF8 via WJ7R and ZF2MC/ZF8 via N7MCA. Also look for ZF2JI CQ WW SSB Contest by John, K4IIF. QSL via KG6AR.

QSLING NOTE. K1FL wants all to know that he is not, repeat,
not the QSL manager for station ST0ST. The ARRL Outgoing QSL
bureau has no route information on cards bound for ST0ST.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065
Australia, for such matters as membership and general
enquiries. Enquiries can also be made by packet to the
President (Col) VK2CTD, or the Secretary (Pat) VK2JPA at
VK2RWI.

News items may be sent to Broadcast Officer PO Box 60
Blacktown 2148 Australia, or by packet to VK2JPA at VK2RWI.
Email addresses for the Broadcast Officer are :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from
anywhere in the broadcast coverage area. We are looking for-
ward to news from your areas to let other amateurs know what
you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes the broadcast for this morning/evening.

This is Michael Corbin VK2PFQ

Late last week I received the final legal account from the Divisional Solicitor. The matter was not mentioned on last weeks Broadcast, as I was unable to determine the exact information regarding the actual amount paid out to date.

In the Annual Report it was stated on page 10 that the amount of money spent on all legal advice was $31,494.00. Try as I may, I could not reconcile this figure with the accounts paid to the Solicitor and the Barrister. This was made doubly difficult as the accountant is presently, not in the country. Accordingly, I obtained fresh information on these Accounts, independent of that shown in the Annual Report. I will not disclose the exact details on this medium, the next Annual Report is the place for that. What I will reveal, is that an additional account for $16,062.60 has been received from the Divisional Solicitor. This was for his work in the Tower Case, as well as for advice in the matter of the removal of certain persons from membership of the Wireless Institute. This gives a total of $47,556.60. The only problem is.... that with the information I obtained, the total amount payable now adds up to $54,012.97. There is a discrepancy of $6,456.37 which is yet to be explained. Hmmmmmmmmmm!!!!!

No matter the discrepancy, the fact remains that this organisation has, I believe, spent enough money on legal fees. The Lord only knows what it has all cost when you takes into consideration what it has cost the "other Side" (sic).....Surely that would put the amount up in excess of $60,000......and what did it all achieve??????

In my opinion, all this expenditure, EVERY LAST CENT OF IT COULD AND SHOULD HAVE BEEN AVOIDED..... Just think what we could have built with this money.....what a station we could have had here at Dural..or What a....etc etc etc etc.

The Institute has sponsored our expensive legal system enough. I'm sure you will all agree. Regrettably, however, to finally reach a conclusion which will not see this Division in a state of confusion for ever, Corporations Law requires that we refer our circumstances to the Court for a decision.

During the week I have had discussions with several of those who opposed ratification of the last election. This has caused me to place the matter before you once again. I realise it's a bit late

but I believe we should leave our options open to avoid the cost of lengthy litigation, which means, MORE unnecessary legal expense, as well as the cost of a new Election.

Our choices are:

1st option : We seek ratification of the last election. The legal advice here seems to indicate (in lay terms) that, if there were no objections, the Court would approve this ratification, approve it quickly and with minimal cost. If even ONE MEMBER (perhaps someone who did not vote in the straw poll) objected to this course of action. The Court would have no option other than to order a fresh election in a manner decided by the Court.

2nd option: We could approach the Court and ask to hold a fresh election; Requesting a ruling as to the precise manner in which this election should be called and conducted. In lay terms again, the Court must consider submissions from the Institute and individual members before setting out the exact manner and method for this new election.

Any decision of the Court would, of course, be binding upon all members of the Division. The election would be held strictly in terms of the direction given by the Court.

Both options will cost money. Option one is the cheapest and the cheapest by far. So members we have a dilemma. I need your input urgently. My personal choice is obvious ...It is Option One..... ratification of the last election and why? .... Because $54,012.97 is too much to spend on legal fees. I must advise you that to date we have not payed for any advice on the current matter concerning the last Election. I believe we all want this matter cleared up, as cheaply as possible. I'll say it again... Just imagine what we could have achieved for our hobby with that amount of money. The mind boggles!

To this end a special Open Forum will be held next Friday night 30th September, at 7.00PM at Amateur Radio House, Parramatta to decide the issue. Members only of course. Time limit on the meeting 10.00PM. Let's put this issue to bed and get on with it, without further ado. I for one have had enough, haven't you? It's your last chance.....BE THERE!!!!!

Country members are encouraged to send letters or faxes. Let's hear what YOU have to say. My fax number is (02) 626 6066. The Institute Fax Number is (02) 633 1525. If you wish to 'phone in your support do that as well. If you like, register your preference TODAY at the end of this Broadcast in the following manner. Yes OPTION 1 or Yes OPTION 2. IT'S YOUR INSTITUTE!!!

See you next week

Divisional News

Please remember, next week's broadcast will start at 10 am.

Morse classes

The next Morse class at W.I.A. Parramatta 109 Wigram Street will commence this Wednesday night at 7 pm.

The course will run for two hours each Wwdnesday night for a period of eight weeks.

The cost will be $30.00 for the course including handouts.

Jim Walker VK2XJW Education Officer

Damsels in distress

A group of young ladies require one, even two, licensed Amateur Radio operators on the weekend of 15th-16th October. Yes, you guessed it ... that's Jamboree of the Air weekend.

This group has previously been helped by Sam Voron. Unfortunately Sam will be overseas this year and is unable to help.

Venue: Guide Hall CHATSWOOD
Date: 15-16th October

Contact Person: Joyce Thorpe 419 6636

Apology

If there are any news items missing from the Broadcast this week it's because of Gremlins in the fax machine at Parramatta ......
The management (?) apologises for any inconvenience.

Broadcast Officer

IOTA Special Event Station

In celebration of the RSGB international HF & IOTA Convention and the IOTA programme's 30th birthday, the special event call sign GB301OTA will be used by members of the Chiltern DX Club (The UK DX Foundation) and by other UK DXers, from their home stations. The Call will also be used from the Convention.

The special event station will be active now, and will be on air until 15 October.

QSL cards may be sent direct via G3PMR, or via the bureau to GB301OTA, please do NOT QSL via the bureau to G3PMR.

That information came via packet cluster and Internet from Alan Jubb, G3PMR, on behalf of the Chiltern DX Club, The UK DX Foundation.

New community radio and television broadcasting standards

The Australian Broadcasting Authority is seeking comments from the public over proposed standards to govern the operation of community radio and television stations. The standards cover News and current affairs, interviews and talk-backs, advertising and program classification.

Listeners who would like to comment on the proposed standards should contact the Australian Broadcasting Authority for a copy: their address is PO Box Q500, Queen Victoria Building, NSW 2000; alternatively, you can phone them on (02) 334-7700 or send them a fax on (02) 334-7799.

WICEN News

Unfinancial members are reminded that their membership will officially terminate on 30th September.

There are no further events in September (at least, none about which we have been informed), but October is shaping up to be somewhat busy. The VRA Annual Conference, celebrating 25 years, will be held at Wagga on the weekend of 8-9th October. There will be a Dinner on Saturday 8th October, and an informal gathering on Sunday 9th. The "Hawkesbury Classic Paddle" is on the weekend of 22nd-23rd October; and as before, Kevin VK2CKD is in charge. The WICEN Co-ordinators conference will be held at Bathurst on the weekend of 29-30th October, and the format will be that of a training Seminar with emphasis on Regional administration, and Operations with a short business session. Naturally, all members are invited to participate.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the
preferred medium, to either VK2AAB or VK2OP BBS. Alternatively, you can use the WICEN telephone BBS on (02) 888-2763, which is available at speeds from 300 bps to 14,400 bps.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and

Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

News briefs

Singapore company, Creative Technology, who developed the well-known Sound Blaster PC card, has now come up with an affordable videophone system that can transfer sound and video signals over ordinary telephone lines.

Well almost ... the video frame rate is limited to about 10 to 15 frames a second and the system gives the audio signal precedence over video. "ShareVision", as the system is called, will cost about $3,000 in Australia, which includes the portable video camera and high speed 928.8 kilobits per second) modem. Who will be the first to try it on the Amateur bands.

"News briefs" looks at communications news items that appear in the mainstream media. Thanks this week go to "The Australian" and "The Sydney Morning Herald". If your local or regional paper runs an item of interest to Radio Amateurs, why not send a clipping to the Divisional Office?

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

CLUB NEWS

Radio Amateurs Old Timers Club

Members and friends of the Radio Amateurs Old Timers Club are
reminded that the next series of broadcasts and call backs will
take place on Monday October 3rd.

Times and frequencies will be as follows:

10 AM. MELBOURNE TIME (2400 ZULU)
145.700 MegaHertz FM
AND
7.060 Megahertz LSB
3650 MegaHertz LSB

11 AM. MELBOURNE TIME (0100 HOURS ZULU)
14.150 MegaHertz USB beaming NORTH
from Melbourne

12 NOON MELBOURNE TIME (0200 HOURS ZULU)
14.150 MegaHertz USB beaming WEST
from Melbourne

8.30 PM MELBOURNE TIME (1030 HOURS ZULU)
3650 MegaHertz For the benefit of members
of friends who, for whatever
reason are unable to hear any
of the morning transmissions.

Callbacks will follow all six transmissions.
News for inclusion in the club broadcasts will be welcomed by Club
Secretary Arthur Evans VK3VQ or Allan Doble VK3AMD both of whom
are OK in any call book.

Summerland Amateur Radio Club

Reminder to all club members ... a special meeting is set down for
Sunday 6th November, 2 pm at the clubrooms. Discussion to be on
changes to by-laws regarding Associate Membership and also on a
proposal to rationalise membership fees. ... full details in your
next club newsletter, due out shortly ... be there so that the
Committee will know what you, the members, feel about these ideas.

Preliminary notice ... our next Summerland Computer Expo is planned for Saturday November 26th. ... bigger and better than the last one ... more info later.

Graeme, VK2GJ, Publicity Officer

VHF to SHF DX Interest Group

Note : The Group's net has a new start time of 15 minutes after the end of the morning broadcast (starting today). The net will continue using 146.5 MHz FM, this FM portion runs for approximately 30 minutes and then;

- transfers to 144.150 MHz Upper Sideband

- The SSB activity night which is every Tuesday between 20:00 to 21:00 AEST is well patronised with stations from far afield taking part. Up to 20 stations have been recorded.

- The Group's talk night on Tuesday 13th September was well attended and examples of preamplifiers and Power anplifiers were on display, amny lively discussions took place discussing the whys and wherefore of many aspects of the amplifiers.

- The Group's next talk night in November will be to start a preamplifier building and testing program.

Richard Soulie VK2ARS Publicity Co-ordinator

Coming events

CQ WW RTTY DX Contest . . . . . .ends today
Special Event Station GB301OTA active . . . . .until 15 October
Fishers Ghost ARC meeting . . . . . Tuesday
Motorola 66th birthday special event station . . . ends Monday
Morse classes commence at WIA Parramatta. . . . . .28 September
Unpaid WICEN memberships expire . . . . . .30 September
Wagga ARC meeting . . . . . .30 September
VK/ZL Oceania DX Contest Phone. . . . . 1-2 October
WIA (NSW) broadcast goes to 10 am . . . . . 2 October
VK/ZL/Oceania Dx CW Contest . . . . . 8-9 October

Curtis Wheeler (cgwh@chevron.com) wrote:

: From a technical standpoint it would be possible. However there isn't any
: suitable RF spectrum available for such an undertaking.

: Curtis Wheeler San Ramon, CA (cgwh@chevron.com)

It's not just the spectrum, there's the space needed for duplicate antennae, radios and controls. You certainly wouldn't want to do this on an aircraft, but even on the ground (the place where duplication would be essential) the nuisance factor just builds up. Duplicate VOLMET, duplicate VOR networks...

As you said, technically possible, but administratively very challenging !

I'm assuming that aircraft would not need to go dual mode, that any spectrum would be too far away for antenna sharing, and that anyway, a clean separation would be needed to allow the old gear to be junked at the end of the overlap period, without forcing any refitting of the new stuff.

Cheers
David GM4ZNX

4681. Urgent IARU VHF adress Region 1

Newsgroup: rec.radio.amateur.misc

>
>Gary

I second Gary's comments. For a neat hole with less effort, buy a Greenlee
3/4" round punch, just perfect for those NMO mounts. Access to the roof
is usually through the dome light, and the new headliners are semi-rigid,
which makes fishing the coax over to the windshield pillar quite easy.
The pillar trim usually comes off quite easily, as well, allowing you to route
the coax down the pillar and under the dash.

Larsen sells excellent NMO mount antennas, and a pack of 5 little black
NMO hole plugs, which you goop up with silicone seal and pop into the hole
before you sell the car.

Hi Scott. The ARRL Operating Manual contains a great section
on operating awards. As near as I can remember, it describes about
300 different awards. None local, although many are forign.

The Operating Manual is a great book that I use about 10 times
as much as the ARRL Handbook.

Prohibited? You mean you can't have a QSO with a Saudi station?
We can. I've worked Saudi Arabia. There are Americans operating
there using a 7Z call and they have a US QSL manager. They are
quite active.

Source record: 259625

Hi,

I recently made two QSOs with stations whose managers are in the
1994 callbook. I have an older book that serves me fine most of the
time, but not this time. So, if some kind soul could e-mail me
addresses for the following calls, I'd be grateful:

9A2AA
DL5DCA

Sorry to freeload this time. Please don't post here; e-mail me.

Source record: 259627

I have in the past 3 years been sporadically QSLing stations
all over the world for DXCC and IOTA credit via the bureau
and my QSL return has been pretty low, yet I hear other SWLs
talk of how they have 300 countries confirmed etc. ....
I want to hear from fellow SWLs of their QSLing experience:
^^

do you need to go direct all the time to get those DX cards
(despite the expense of doing so) or is there a special
knack in getting that reply QSL card via the bureau?
I would like to know what stations are no problem via the bureau
and which especially welcome SWL cards.....
And lets see if I get a better rate of reply through my letterbox!!!

E-mail: u9325913@qub.ac.uk
Packet: coming soon... (I hope)

4690. The HamSat Handbook- has the satellite Freqs ur looking for

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-26 13:53:27 UTC
From: wwg@coutts.UUCP
Message-ID: <403@coutts.UUCP>
Source record: 259516
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.misc

I've seen many posts over the months requesting satellite frequencies of one satellite or another. I just got my copy of "The HamSat Handbook" by Anthony R. "Tony" Curtis, K3RXK this morning. Flipping through this book I am pleased to see an up to date (Feb 1993) description of all OSCAR satellites, their history etc.

Chapter 1 covers the early history, titled "The First Space Satellites".

Chapter 2 "The Story of Orbital Satellites Carrying Amateur Radio" discusses the history of all OSCARs to 1993+.

Chapter 3 is devoted to modes and frequencies used by the satellites. (This would be the reference material that many are seeking, although chapter 2 also provides a fair bit of good information).

Chapters 4 and 5 covers Space stations and SAREX.

And finally chapter 6 covers Balloons, meteors and EME etc.

To recap, if anyone wants more information on what's available up there, I think that this is one very good source for amateur radio enthusiasts.

The HamSat Handbook, (I'm not affiliated, just a satisfied
by Tony Curtis K3RXK owner of the book!)

On a similer vein... Cable TV in the UK uses frequencies from 40Mhz to 300Mhz.
Under British law... If they are leaking onto our frequencies from the pipe
it is thier responsibility. If we interfere with them (even TX on their fundimental)
it is their responsibility. Is that the same in the US ?

Thanks Jer, couldn't have said it better myself! Of all the things
I may have problems with in my flying the Comm radios are not among them.
My goal is better, cheaper and safer flying not more radios. At last
count I had seven radios and I realy don't feel that I need any more and I
certainly don't feel the need to change the ones I have.

4697. MFJ and FBB, how????

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-26 16:18:41 UTC
From: briane@goofy.iaccess.za
Message-ID: <366s91$2ok@goofy.iaccess.za>
Source record: 259534
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc

I have just ordered n MFJ 1276 TNC from the States. My intention is to run a BBS on VHF, with Pactor forwarding on HF. I will be using the (F6)FBB software to run the BBS (v 5.15).

My question arises from the set-up instructions contained in the FBB manual. It states that "...for TNC-2 or close clones. The EPROM of the type 27256 must be replaced by a special EPROM with the WA8DED host mode software, or by the German TF4, TF8 or TF18" (Pg 37 of manual)

Now the MFJ advert that I saw prior to ordering my 1276, says that the MFJ is a clone of the TNC-2 type, totally compatible with the TAPR system, and is used in the US for digi's and BBS's.

Q1. Do I need to order the special EPROM mentioned, or does the MFJ come standard with the "right stuff".

Q2. What software are the majority of BBS's in the USA running on, here in ZS land, FBB is the favourite. If not FBB in the States, is the favourite available via FTP anonymous site.

Please e-mail to my Reply To, or [:-(] post replies here.

Many thanks for taking the time to read and assist in this matter.

Does anyone have experience with both BMK-MULTY and HAMCOMM (the one by W.F. Schroeder, DL5YEC)?

I already have an HF modem with good filters (an AEA CP-1). So rather than getting an expensive TNC, I'm interested in a PC-based digital communications package for HF that includes CW, RTTY, AMTOR, and PACTOR.

Could anyone post or email me a features and price comparison?

Thanks and 73,
--Peter Klein, KD7MW

peterk@seanews.akita.com

Note: I'm interested in programs that actually do the decoding in the PC, NOT terminal programs for a TNC.

>in the mail] Can anyone recommend a source of information regarding hamfests
>in the Southern NJ/NY/Eastern PA area? I really like going to these things -

well, I would consider joining the ARRL (get QST) or subscribing to CQ or 73. All the mags publish an event schedule listing hamfests for the next month or so.

You don't have to be a ham to be an ARRL member. You do have to be a ham to be able to vote on the few things members get to vote on and to be able to to be appointed to a job...you'd be an associate member until you received your license and at that time you'd notify the league and there you are.

Jerry congratulations. It must be nice. My VE never mailed in the paperwork. Took the test July 17th. in Skaneateles, N.Y. VE AA2LB gave paperwork to girlfriend to mail. They then had a fight and she keeps the paperwork. I found all of this out when I checked with W5YI (the organization who gets the forms from the VEs and then sends them to the FCC) they had no record that the exam was even given. To say that I am pissed dosen't begin to cover it. I am taking steps to rectify the situation, but... So if there are any others out there who have been waiting a long time you might want to check. Don't even joke about the mailman in Chicago setting fire to sacks of mail he didn't want to deliver.

Sorry for the bandwith folks but just wanted to blow off some steam and aleart others to the possible reasons for the delay.

Greetings Greg:

We spent about 2 and 1/2 years in Jeddah in the mid 80s.
Generally communications seemed to be quite restrictive. I have heard a
Saudi station from the east side. It was an American that was working
for an oil company. I also worked a ham who was out of Jeddah on a
dxpedition in India I beleive. He worked as a pilot for Saudia airlines
and if I remember correctly he was a Canadian. If you check the call
book you could possibly record hams listed there and contact them when
you get there to find out about the regulations.

I hope this information is helpful.

Looking in the ARRL Repeater Directory ('94-'95) I saw a listing for a repeater on Hopi Point in the Grand Canyon. Does anyone have any experience they can relate in using this repeater? Particularly, from the bottom of the canyon?

I have a number of hobbies, one of which is whitewater rafting. I just returned from an 18 day trip in the Grand Canyon where we almost had to evacuate one of our group due to injuries. The only option we had for getting help in this situation was to use a signal mirror to try and catch the attention of an overhead plane.

It occurred to me that this repeater and a 2m HT might be useful in this situation. The main thing I'm curious about is just how much of the bottom of the canyon can it reach. The entire length of the trip is 225 miles from Lee's Ferry to Diamond Creek. I'm not sure where Hopi Point is, but I'd doubt there would be more than a few miles on the river where I would have line of sight to Hopi Point, mostly due to high canyon walls.

If someone has done this before, did you just use the rubber ducky or did you carry some kind of break-down antenna? Did you have to hike up away from the river to get a clear enough signal?

Thanks for any information you can give. The prospect of using a 2m HT for emergency use in remote places has really piqued my interest in amateur radio. I'm studying now for my Tech+ so I can explore this further.

True, there are absorption peaks. But, since they aren't used by
microwave ovens, I stand by my assertion that the theory doesn't
apply. Or, does anyone know of a 24 GHz microwave oven that one can
buy that does an acceptable job of cooking food?

No it doesn't, the lowest absorbtion frequency peak is too high to
effectively penetrate thick pieces of food.

Why are absorption peaks needed? True, you don't have to work as hard
to transfer energy to the food. But, look at other mechanisms used for
cooking food, such as stoves and fireplaces. They seem to do an acceptable
job--I'd rather eat a hamburger cooked by a theoretically inefficient
fireplace than eat a raw one!

>are much cheaper than ham gear. And you will have a 25 watt rig. Even after
>you get your marine station license it would be cheaper than your handheld.
>Don't take short cuts with your safety on the water.

Actually, doing the modification is not illegal. Transmitting on those frequencies with a transmitter that is not type accepted for such use would be illegal, however. Except that in an emergency, it is legal to use whatever means necessary to summon assistance.

The FCC rules for marine radios require an (expensive) license just to possess one on a boat, even if you don't use it. To me, this is very counter productive as far as safety is concerned, as it discourages the occasional boater from obtaining a useful piece of emergency equipment. However, if you have an amateur license, your station is licensed by the FCC (as required by 47 CFR 80.13(a) for all stations in the maritime service) and you are breaking no laws just because it is capable of being used on frequencies outside the amateur bands. If you actually use that capability in a non-emergency, then the FCC can come down on you.

Disclaimer: I'm no lawyer and wouldn't want to be one.

Subject: Kudos to FAC for ASTA
I want to express my thanks to the FAC keeper for pointing me
to ASTA.
I am contemplating acquiring a satellite receiver and my deed
restrictions prohibit such animals. A quick look at the FAC and
I was turned on to ASTA. One call to them got me a warm fuzzy
feeling that I could indeed battle my civic association on this.
ASTA has two packages One for Zoning and another for Restrictived
Covenances. I just recevied the later which cost $34.95 and
found it very enlightening. The "Restricted Neighborhoods and
Unrestricted Skies" document by Lauritz Helland was most informative
and written in a non-inflamatory way. I plan to use this to
back up my position that I can install the dish, regardless of the
No outside antenna position of our deed restrictions.
I found that the ASTA people genuinely helpful and do not begrudge
the cost of the legal packet one bit. They were extremely please
to hear that I found out about them from the internet, they knew
about it but unfortunately are not on it. Since ASTA is a non-
profit organization, they are funded entirely on sales of these
two legal packets. I encourage anyone who is considering installing
a satellite receiver to support ASTA. Without them, I would have
felt very alone and intimidated by my community's restrictions tha
were made 15 years ago and obviously out of date.
I don't have any affiliation with ASTA, I just felt that they offer
a very valuable service and are unfortunately not well known. (My
satellite dealer who has been in business 12 years didn't know about
them).
Anticipating a world of new viewing
>>> Ahhh, this is what I need, a source of information. Just what is the
>>> 'ASTA'? I'd sure like to find an organization which knows something about
>>> fighting for the right to place a dish on your own property.
AMERICAN SATELLITE TELEVISION ALLIANCE (ASTA), headquartered in
Valhalla, NY, is a non-Profit organization formed to combat zoning and

covenant restrictions that impede the rights of dish owners to purchase
and use satellite TV systems. For more information as ASTA,
call (914) 997-8192.

Wow, Alan - no need to be so mean. The folks here know about the
invalid default address and are working on it. I've posted my
real address to the net several times in the past.

This is a university with 48,000 students - the computer center
has it's hands full with other problems besides the invalid
address. They set the standards, not me!

73 from Hawaii,

Seems like there's been increasing ham activity as far
as web pages go.

Just thought I'd drop a note in here to tell yous about
another. W2SZ is the student run Amateur Radio Club at
Rensselaer Polytechnic Institute in Troy, N.Y. Check
out the page if yer interested in that sort of stuff.

http://www.rpi.edu/~mickim/w2sz.html

Let me know what you think. I don't currently subscribe
to this newsgroup although I'm sure some club members do.

|>
|> Yes, I know, "the distance to the 'radio horizon' IN MILES is the
|>square root of twice the antenna height in feet". You big silly.

Actually it's closer to 50% greater than that for the radio horizon. The formula is something like: d=1.4*sqrt(h) where d is in miles and h is height in feet. Also note that the distance you can communicate is the sum of the distance of each stations horizon. So for two people with their radios 5 feet off the ground, ought to be able to communicate to a distance of about 9 miles plus or minus terrain variations and obstacles.

Also note that this distance is for line-of-sight communication, which is appropriate for your 2 meter HT, but not for a 2 meter weak signal station that is using 10-15 dB gain antennas and 100-200 watts of power. A station like that with an antenna at 50' should be able to communicate with a similarly equipment station to a distance of 150 miles or so reliably. This is as opposed to the 28 miles predicted above.

>but both.
>
>Is the interference (apparently caused by electro-magnetic fields from
>the monitor and computer, right?) getting picked up by the antenna, the
>radio itself, or both?
>

Russ,

How close is the CB antenna to the computer? Maximize this distance.

Interference can be conducted through the computer's power cable into
the house mains and thus into the radio's power supply. Try plugging the
power into separate circuits on your house mains.

Interference can be coming from the peripheral cables try unplugging the
mouse, printer, etc.

Shielding and suppression techniques are best implemented at the source.
Ferrite beads on the cables, beefed up cabinet grounding, and additional
shielding can be tried. Try to determine what function of the computer
is actually causing the interference before making any fixes.

I'll bet that the most likely culprit is the switching power supplies in
the computer and monitor. I'd start by isolating those power supplies
from your CB's supply.

>repeaters. The notice also warned that failure to comply could result in loss
>of license.

Where in section 97.205 (or anywhere else) does it say anything about the status of uncoordinated repeaters vs. simplex operators? I thought the only reference to uncoordinated repeaters was with respect to coordinated ones. The uncoordinated repeater must not cause interference to the simplex operators only in as much as any station must not cause interference with another. Note that this means the simplex operators also must not cause interference to the uncoordinated repeater! I would guess that there are some details left out of the scenario mentioned above.

>and dahs, but the characters are presented at a rate that would by typical of
>5wpm (PARIS transmitted 5 times a minute).

Huh? I practice with a Farnsworth coding speed of 22wpm or more and still have to work at not translating individual dits and dahs. When I slow it down to what I expect on the element 1b exam (15wpm or so) it gets even worse. Because of the way they give the tests, it's possible I may be able to pass 20wpm before I can pass 13wpm. :-)

Now if I could just convince the VE's to give me the 1b exam with Farnsworth of 25wpm or so, I might be an advanced already!

The problem I have with using Marks suggested method is that with a large difference in the character and word rates, I become too dependent on the dead time between the characters to do the translation. When the character rate is then slowed down, you have less time to translate after hearing the end of one character before the next one starts. To get past this I'm trying to force myself to learn to "copy behind", even at the slower rates.

YMMV

How did you get 28 miles? Did you double the height, take the square
root, and then multiply that by the square root of two, then double
that?

Dave, KZ1O

Cross-posted to: sci.electronics,rec.radio.amateur.equipment,rec.radio.amateur.misc

I have a 50 MHz "driver" amplifier for an NMR device. It was made by
ETO (the same people who make the Alpha amateur amplifier). Unfortunately
ETO won't tell me anything about the amp because they manufactured it
for another company. They wouldn't even tell me the name of the company!!

I have the circuit diagram but what I want to find out is at what power
level it was used at. I would also like to find out what the transformer/
power supply is good for. The valve (tube) is a 3CX800 equivalent but
some of the componentry looks whimpier than 800 watts. (the output connector
is a BNC!). If the power supply can cope with it, I could upgrade the
other components to make a very nice 50MHz 800 watt amp.

The p/n is AD101D Driver Amp. If anyone recognises this device I'd appreciate
any information.

Back in the mid-60s when I last ran 6m AM both base and mobile, all antennas were horizontally polarized. I still have a couple of 6m beams, both commercial and my home brew, along with a 3 ring 6m Halo for mobile use (all horizontal).

Those and my Utica 650 are gathering dust on my shelves just waiting for a resurgence in interest. But as one who has frequently used both AM and FM you can't beat FM for its sound and capture effect, which eliminates all the very annoying heterodyne squeals so often heard on AM.

Interesting stuff about ASTA and satellite dishes. I'm in a small sub-division that has restrictions allowing satellite dishes and tv antennas not exceeding 20 feet in height but forbids antennas for cb, ham, or swl! Right now I have a 20 meter dipole hung off the chimney (kind of in the back, out of sight) and a random zepp affair made of # 30 wire and fed with homebrew ladder line. I'm tempted to put up a Butterfly mini-quad and call it a "TV" antenna. I'm also tempted to put up multiple tv antennas on 20' masts (on top of the rear flat roof) and hang multiple dipoles!

But with QRP 5w cw I've worked 46 WAS, 37 DXCC and WAC (just lack a JA card for that one!)

This is the first time I've heard this stated by anyone. I've heard the counter-statement many times. In itself, this means nothing. Without intending an ad hominem attack, I will say that most developers around here are not exactly reliable sources of information about anything. The amounts of money involved are so large that truth is generally the last refuge of either side in any dispute. I see no reason, based on this posting, to change my opinion as to the origin of most restrictive antenna covenants.

To be fair, most homeowners probably do prefer restrictions on outside antennas. However, it is at least 'received wisdom' in the Southern California area that developers make arrangements with cable companies, to their mutual advantage.

I am not without my biases. My first response to this posting, which I cancelled, was much shorter and more direct. However, I have never personally suffered from restrictive covenants. I bought a house in an older neighborhood to avoid them.

Well, true enough ...
I took all of the theory, tech -> extra in one sitting, I just agreed with the administering VE that they would keep passing me the next paper providing that I passed the one before it. Not exceedingly difficult, you just have to be prepared to sit there a bit longer than everyone else.

As far as CW goes, well, being a class B licensee, I had no morse, so All I will get out of it is a no-code tech license ... but I am working on that, and intend to jump straight in at 20 wpm.

Since there is no real reciprocal licensing in the US, just bite the bullet and do it.

4725. This Week In Amateur Radio..Help!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-27 01:20:42 UTC
From: kxkvi@delphi.com
Message-ID: <pK2VIuy.kxkvi@delphi.com>
Source record: 259564

Hello..N2LQS for This Week In Amateur Radio...We are in need of a little help on this end. We would like to bring the bulletin service's editing proceedure up to date, toward this end, we were donated an old IBM XT 8088 machine, with a hard drive, and a Soundblaster compatible sound card (AdLib) internal. Unfortunately, we do not have any software or drivers for this 8-bit card. Our search of various on-line services and local BBS's with CD shareware disks on-line have proved fruitless. So here we are on the net. Does anyone out-there know of DOS based soundcard software that will allow us to record, play and edit on this soundcard on this old gear? If so, please let us know here on the net, or via packet at WA2UMX.ENY.NY.USA.NA.

Also, while I'm here, we are also looking for a FM exciter (2 or 3 watts) for use here in the albany area to put This Week in Amateur Radio on our second local repeater. No luck on this locally either.

Thanks in advance for any help you can provide.

: have less time to translate after hearing the end of one character before the next
: one starts. To get past this I'm trying to force myself to learn to "copy behind",
: even at the slower rates.

: YMMV

: -Brian
: suggs@tcville.es.hac.com

Brian,

The key word here is "translation". Whether or not you will be able
to pass 13 or 20 wpm by translating dits and dahs will be a matter or
personal ability...most people can not copy above 10-12 wpm this way.
"Copying behind" is a technique which is quite effective at higher
speeds, but I don't know of anyone who uses that technique while still
having to consciously "translate".

I've never had to "unlearn" counting dits and dahs because I did not
learn it that way, but I understand it _is_ difficult. Try to forget
what you know (!) and learn again listening just to the sound and
rythym (easy to _say_!), and shorten the letter gaps to force an end
to conscious translation.

As has been mentioned here before, you _may_ be able to pass the exam
using the count and translate method, but you will have a great deal
of difficulty actually using code this way...if you actually intend
to use it.

Good luck!

|>Isn't the square root of 2 kinda close to 1.4? So that
|>
|>sqrt(2h) is very close to 1.4*sqrt(h)

Ah yup, my mistake. I was thinking it was 1.4*sqrt(2h), but something
in my fingers must have made me type it in correctly, even though
the brain was off in never never land. I suspect I was thinking of the
factor of 2 you get when two equivalent stations are trying to work
each other, but messed it up. What's interesting is how much beyond that
though a reasonable SSB station can get. I know from my own experiences
that 150 watts into a 12 dBd antenna at less than 40 feet allowed me
to communicate with similar stations out to about 120-150 miles except under
the very poorest of conditions. That's as opposed to the 18 miles one
might otherwise expect. Also, I believe that even a normal FM station
does better than sqrt(2h), but maybe I'm just on a relative high point.

From: George Rybicki <seryb@lims01.lerc.nasa.gov>
Message-ID: <3692t9$o44@sulawesi.lerc.nasa.gov>
Source record: 259479

I have a few questions for someone familiar with Motorola Radius HT's.

I found a Radius P10 at a hamfest recently. To my surprise and delight it was set up for 6M.
The unit was set up for one channel 52.525 simplex. I was not aware that Radius was available in VHF Low band.

The questions.

1. The unit has a 2 position channel switch, can it be set up for 2 channel operation?

2. How do you set it up? Does it require a second channel element/ xtal or just
reprogramming?

3. The antenna is a thick, rather long rubber duck with a yellow dot on the base. Is this the
correct antennna for vhf low?

4. Any related general info would be appreciated.

Thanks

George (KE8YX)

From: sgoad@bianca.amd.com
Message-ID: <CwsMHt.191@txnews.amd.com>
Source record: 259484

My neighbor is trying to set up hm2plus vers 3 on a Xerox Sys 60
PC. The PC is running DOS 6.2 and is very plain. When the
hm2plus software loads up it hangs after the opening display.
The keyboard is locked up as well (ie, CTRL-ALT-DEL does not work.)

He has no documentation for the PC and thus I'm sort of at a loss as
to what to do to make it work. If he runs it on his Dell 386, the
program works great.

Does anyone have any useful suggestions?

You can reach me at scott.goad@amd.com or post it here, although I
can't image that very many people have this problem.

Thanks for your help,

Scott

I just got back from a lecture on the communication system for the early NASA space activities at our radio club. The capcom radios used in the Mercury program, (1962) and I think he said the Gemini program were all AM on HF, VHF. The lecturer said there were problems with the doppler effect and with antenna polarization, even on AM. Could these be more of a problem on FM, and be another reason why AM was used there and is still used on aircraft?

What about weight? Weight is not a problem with land mobile but every ounce counts on spacecraft/aircraft. Does a comparable NBMF radio weigh more than an AM radio? One of the first FM applications were radios on WWII battle tanks.

Sorry if I am late posting to this thread, it just became interesting after the NASA radio lecture.

It is my experence that RS salesmen tend to say the first thing that comes into thier heads. It would have been worse had you asked a technical question.

As far as a book to get you goingyou cant beat 'Now Your Talking' published by the ARRL. It is cheaper at Radio Shack than direct from ARRL.

Source record: 259497

In article <369hac$qko@westnet.westnet.com>, lgreco@westnet.westnet.com (Luigi Greco) writes:

>Why is most man-made noise vertically polarized?

(quick-and-dirty explaination follows):
It's mostly a function of how the noise is actually measured. That is, most man-made noise measurements of interest take place very near ground level (in a building, car, etc.). Since you're low to the ground, and the earth is a fairly good conductor at low frequencies (HF), the horizontal component of the noise electric field gets cancelled out due to the boundary condition imposed by the earth (same physics as vertical electric fields reflect without phase reversal, but horizontal ones phase shift 180 degrees). So in the process of observing these noise fields, only the vertically polarized ones exist at the measurement points.
If you went up in the sky and measured the same quantity, you'd find both polarizations.

>brind up the repeater). This means that a rig made for the US will have to
>have their type of tone encoder installed or you will not have access to their

You are right about this. I have not traveled to europe, but you might notice
a few things. In Europe, they, indeed, do not usually use pl tones for
squelch. I believe, instead, they use an audible 1650 Hz (?) tone at the
beginning of each transmission to key the repeater. You may also notice, if
you check the product information guides from Icom, Yaesu, Alinco, etc.
(those companies who sell both here and overseas) that there is usually both
a US and European version of each model, plus maybe asian, etc. Remember
that other countries have other band plans; some european countries have
not 144-148 as the 2m band but other frequencies.

What's really surprising is that the RS person would know about anything
like this. It's quite out of their character to be educated ;)

Anyway, this is what I understand

4752. Need help with FT-530: half-duplex crossband operation

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-27 18:27:54 UTC
From: jbs@ee.duke.edu
Message-ID: <369o7a$2rt@news.duke.edu>
Source record: 259499

This weekend we were experimenting with crossband repeating and ran into some difficulty with feedback when trying to use the HT transmitting on one band and receiving on the other. With my DJ-580 you set FL (freq lock) and then toggle full-duplex on/off for the active band by pushing the "Power" button. Works great - with FD off no feedback when you transmit. My friend has an FT-530 and nothing in the manual gives any clue about turning off full-duplex operation.

Anybody out there know how to switch it off on a 530?

Thanks in advance...

-joe

>having to consciously "translate".

Even if you don't count dits and dahs, you still have to translate the
sound into a letter. That's all I meant by "translation". I've tried
hard *not* to learn by dits and dahs. For me, this translation time is
the limiting factor, not the overall code speed. i.e. as long as the
inter character time is great enough, I have no problem with high
Farnsworth rates. Unfortunately, the exams (and real world QSOs) are
not sent this way. (e.g. I think I would have a much greater chance of
passing element 1b if it was Farnsworthed to, say, 25wpm.)

In my previous post, I was just trying to point out that the technique
of learning at higher Farnsworth rates has its own drawbacks, as it tends
to avoid the need to translate one letter while simultaneously listening
to the next.

I know that it is 'bad form' to post to a news group
without readinf for a few weeks, reading the FAQ, etc,
but I'm leaving the country monday on business and am
looking for some software to help me study for the
tests. I will be gone for 6 weeks and I hope by the ttime
I get back I will be studied up enough to get my ticket!
At a local swap meet I got a HAM CD ROM for $10 which
had what I'm looking for, but with out of date questions.
What I would like to find is some share ware programs
that will quiz me on the test pool for the General, Extra
and Advanced tickets. I have studied the books and think I
can pss the Novice and Tech without a quiz program, and I have
some morse code trainers.
Does anyone know what I am looking for? I'm very strapped
for cash and would like to avoid purchasing programs if I
don't have to.
Thanks for your time!

>of transmission.

Can my scanner (a Pro-37) receive a true CW (A1A) transmission? I've picked up id's in Morse code from Ham repeaters, but I thought those were generated tones sent out on FM.

The reason I ask is because I'd like to receive the slow-code and fast-code practice sessions sent out by W1AW on 147.555 MHz. Problem is, I've never been able to get anything. I've not been able to receive W1AW voice broadcasts either, so maybe I just need to get up on a hill or replace the rubber duck with something better.

: Tim AB5OU

In your case, it seems you have been able to make sufficient
headway in adopting to the covenenats, at least in a non-visible
way.

Having said that, I think the specific nature of these covenenats...
allowing an antenna for TV, but not for other purposes, would
be an easy thing to overturn, after all, many ham band beams look
very much like a TV antenna. The covenenant, if it truly
restricts SWL antennas also is pretty unique.

Anyway, this sure isn't legal advice, just my opinion.

Good luck on completeing your WAS and other DX goals.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.info

Macintosh Amateur Radio Software - Sept. 1994
Version 1.0.8

Sorry I have been so delinquet in getting this list back to the nets... but I have been busy trying to recover from a hard disk crash! Please note that I have changed my e-mail address for BIG files. If you are so inclined to send them... please send them back to the address this post originates from.

Please feel free to distribute this list as widely as possible. Many of you have asked if it is OK to cross-post this list? I don't mind, but I would like to know where it is going. If you think it should be cross-posted to other USENET groups, please let me know so I can try and manage these. We don't want to have any duplication or our welcome will be wore out!

Those of you that can tell me about ANY of these programs compatibility with System 7 would be appreciated! I am going to be adding a System 7 compatability section to EACH description in future releases. If the application is KNOWN to execute properly under System 7, the System 7 anotation will be placed as the last line of the product description. More clarification on levels of System 7 compatibility in the future editions... but this is a start!

Some of the information in this list was gleaned from flyers supplied by the software vendors, or in some cases from reviews in amateur radio publications or the README files included with the archive. Some of the information has not been verified for a long time; please check with the vendors/authors for the latest product specs, pricing, etc.

NEW/CHANGES: I am continuing to add more version numbers so that our users will know if they have the most current release. Thanks to those that have already sent them in... I'll accept all corrections! I just saw on the net two other lists that I'll try and compare with this list very quickly and see if there are holes!

A new release of both NET/Mac and IM/Mac are now available.

The Mac version of Automatic Position Reporting System (APRS) is is NOW available at ucsd.edu. It really looks great... thanks Mark and Keith Sproul!

Check at the bottom of this list for more information on ftp'able sites carrying Amateur Radio software. The ARRL ListServer is also carrying the latest version of this list... in case you loose this one!

*** Collections ***
<MacNet v5.31>
Join MacNet and get included in the latest version of "Macnet Roster", a HyperCard 2.x stack that now has > 400 members and is the proverbial "Who's Who" of hams using Macs. You'll find "Macnet Roster" a great tool for finding out who, what and how other hams are using their Macs with their ham stations. It even includes this file!
Send $30.00($40.00 DX) check or money order to: WD1V, John Seney, 144 Pepperidge Drive Manchester, NH 03103 USA.
All disks shipped First Class Mail PPd. Get the COMPLETE Macnet Software Collection ppd. on 10 disks!
Based on your interests, you'll also receive public domain shareware received by our members.
System 7

<Project Mac>
Contest logging, antenna design, satellite tracking, clip art, etc. Microsoft BASIC required for many of the programs. Most of this software is now available in the MacNet collection. Send three formatted 800K Macintosh disks with stamped, self-addressed disk mailer to Stan Horzepa, WA1LOU, One Glen Ave., Wolcott, CT 06716-1442. Stan can be reached at horzepa@gdc.com
NOTE: Stan has indicated much of this software is "old" and may not work on some newer Macs. Also he notes that most of his collection is available in the MacNet collection above. He will send anyone what he has if you send him the disks and SAS mailer.

<Amateur Radio Software for Macintosh>
<Amateur Radio #1>
Contains satellite tracking, Morse code, attenuator design, and Ohm's law calculator programs. Kinetic Designs, P.O. Box 1646, Orange Park, FL 32067.

*** Test preparation ***
<Ham Test Stacks>
HyperCard stacks containing the entire question pool for each license class. Can be used for preparation or generating actual tests. The current releases are: Novice v4.1(new questions eff. 7/1/93), Technician v4.0(new questions effective 7/1/93), General v2.4, Advanced v2.4, Extra v2.4.
Available via anonymous FTP from various sites, including uxc.cso.uiuc.edu (/pub/ham-radio). NOTE: The newest releases of Novice and Technician stacks are available at uxc.cso.uiuc.edu (5/6/93) Author is available via Internet: dls@genrad.com
NOTE: Diana no longer is supporting this software, she no longer has a Macintosh computer. Diana, thanks for your wonderful contribution to the Amateur Radio community for these stacks!
System 7 savvy with HyperCard 2.1

<MacHam>
Test generators and study aids for the Technician, General, Advanced, and Extra class written elements. Includes the complete question pool for each

license. Hypercard based.
Coyne Co., P.O. Box 2000-200, Mission Viejo, CA 92692.
System 7 with HyperCard 2.1

*** Morse code practice ***
<N6MZV Morse Trainer>
Lets you practice any combination of letters, numbers, and/or punctuation characters. Can send user-created text files.
RT Martin, N6MZV, 10382 Orange Avenue, Cupertino, CA 95014. Also available via anonymous FTP from ftp.apple.com (/pub/ham-radio).
Shareware.

<Morse Code Tutor v1.6> - used to be called Morse Tutor
Sends random groups of letters, numbers, and/or punctuation characters. Available via anonymous FTP from ftp.apple.com (/pub/ham-radio). Or send formatted 800K Macintosh disk with stamped, self-addressed return disk mailer to Jack Brindle, WA4FIB, 726-175th Street SW, Bothell, WA 98012; Compuserve: 73365,606.

<MorseMania V1.0>
Designed for those already familiar with Morse code who want to improve their speed. Allows code practice at various speeds and audio pitches. Can generate random sequences or play the contents of user-created text files. Freeware. Available via anonymous FTP from simoon.stanford.edu (/pub). Contact Edward Plumer, KM6IQ, for more information; Internet: plumer@simoon.stanford.edu.

<MacMorse>
Randomly sends chosen characters. Lets you create your own practice files. David A. Kall, 700 Marine Parkway #314, New Port Richey, FL 34652.

<MacMorse v1.3>
MacMorse is designed to help you learn Morse code and improve your receiving speed. It has several ways that it can send letters and punctuation. Shareware. Doug Havenhill, Dynamics and Control, 7143 West Sunnyside Drive, Peoria, AZ 85345.

<MacSamuel>
Sends random words, random character groups, and user-created text files. Can also create simulated QSOs with randomly generated text and callsigns. Avant Systems, P.O. Box 5437, Pittsburgh, PA 15206.

<Zihua Morse>
Designed to teach Morse code to beginners and to improve the accuracy and speed of advanced users. Responses can be typed into the computer; the program will calculate accuracy and timing statistics for each session. Optional speech synthesizer reads the characters out loud for an accuracy check. Zihua, P.O. Box 51601, Pacific Grove, CA 93950.

<Sparks-II v2.0.5>
More Code training program. Available for anonymous ftp at rahul.net /pub/davidj/radio

<Morse Master v1.0>
The newest of the morse code training programs. MM calculates the real speed as follows: Real speed = Number of Words/end time - start time. And the lengh of word is generating randomly, so if you set even 5WPM, sometimes another value will appear. However you should believe the slidebutton's value. If you repeat many times, the average speed should be 5WPM (if not... anyway, believe the slidebutton's value). Archive is available mac.archive.umich.edu, path: mac/util/organization/morsemaster1.0.sit.hqx The author can be reached thru the following e-mail addresses: h79261a@kyu-cc.cc.kyushu-u.ac.jp. (Eiji AOL account is no longer valid - moved back to Japan after his studies.)

<Morse Trainer-US v1.1.1>
MorseTrainer is a powerful tool for learning and training Morse code. Features: Three different training modes: user text, random text, library text; Arbitrary signal pitch and timbre; Arbitrary speed and tempo; Multi-alphabet support; Random text generator; Text library editor; On-line alphabet; On-line manual; Help Balloons; And a lot more. New features in 1.1: Enhanced sound generator, volume control and risetime control. The pitch is set in steps of 10Hz instead of using MIDI frequencies; Speed and tempo limits increased to 80 words/minute as a result of the enhanced sound generator; User-selectable font in the Misc settings dialog. FREEWARE!
This version uses TrueType fonts instead on bitmaps fonts so that the user can distinguish 0(zero) from O(character). Furthermore speed and tempo can be given in either characters/minute or words/minute. Archive is available mac.archive.umich.edu, path: mac/util/organization/ Author is available via internet: sund@tde.lth.se
System 7 savvy

<CW Speed Builder v3.0>
This program is for improving Morse Code (CW) reception skill. The major difference between this and other Morse Code training programs is that this one will not continue sending until you provide the correct answer. Major changes which have been suggested and implemented since last version include: after three incorrect responses the program shows the correct character; the list of characters at the end which will show those you know and those you need more practice on; the frequency of the tone has been changed; volume of the tone has been reduced; the character " - " has been added (dah dit dit dit dah) Comments can be sent as follows: America Online:K7UPJ, Internet:k7upj@aol.com, Packet radio:K7UPJ@KA3T, Compu$erv:70521,2356, Mail:Box 84, Cascade, MD 21719

*** Packet and other digital modes ***
<NET/Mac 2.3.44>
Allows simultaneous TCP/IP, AX.25, and NET/ROM connections. Requires a TNC with KISS mode. Copyright, but free for noncommercial use. The latest releases have added support of multi-port serial boards like AE's QuadraLink. It is now possible to have up to 16 TNCs connected up to a Nubus Mac!
Adam van Gaalen, PA2AGA, (Internet: adam@IGG.TNO.NL) has been making the

modifications to NET/Mac. This version (and others) is available via
anonymous FTP from ucsd.edu (/hamradio/packet/tcpip/incoming),
mac.archive.umich.edu and oak.oakland.edu (/pub/hamradio/mac/digital/)
System 7

<Domain-to-Hosts Converter 1.0r3>
This application will create a hosts.net file from the domain.txt file
that PC owners use with NOS. Created by Ken-NS1C is available on many
TCP/IP packet switches in New England.program.
System 7

<IM/Mac 1.0b28c>
Mailer program for use with the SMTP protocol. Alternative to the BM
program that comes with NET/Mac. Written by Ivo van Ursel, ON1XK. Ivo is
continuosly updating his mailer program. His newest release supports
StuffIt Expander 3.5.1,built-in BinHex support, selectable sound chimes
for incoming mail, "quoting" of forwarded messages and lots more. If you
are not using this program... why not? Check for the latest release in the
directory before "blind" ftp'ing. This software supports System 7's
Ballon Help and is System 7 savvy! Available via anonymous FTP from
ucsd.edu (/hamradio/packet/tcpip/incoming).
Author is available via internet: on1xk@igg.tno.nl <<-- new address for Ivo!!!
System 7 savvy

<SoftKiss 1.8>
Control panel device that emulates a TNC running in KISS mode. For use
with packet-radio modems such as the Baycom kit and PacketMac Modem.
Version 1.8 July 9 1993 update since 1.6. KD6PAG found a bug in quoting
recieved escape and end characters is sofktiss 1.6. The bug and the fix
and patch are all correct, thanks for some great detective work. Lots of
doc files and drawings included in this archive! Requires the Serial Tool
from Apple's Communications Toolbox! Available on the HAMNET forum of
Compuserve, America Online and via anonymous FTP from
akutaktak.andrew.cmu.edu (/aw0g).
System 7

<PacketMac Modem>
PacketMac Modem kits can be obtained from: Sigma Design Associates, P.O.
Box 49085, Colorado Springs, CO 80919, (719) 260-5513 (after 1/94). Dexter
Francis can be reached at FRANCIS4@AppleLink.Apple.COM

<Savant 1.0.2>
A new packet terminal front-end by the author of Virtuoso. Savant has a
split window interface, but it's also a multi-window, multi-connection
interface and will work with almost any TNC, unlike MacRatt or HostMaster.
A demo version of the product is available at cpre1.ee.iastate.edu
(pub/ke0ph) or via US Mail, send a SAS disk mailer and disk to CM
Technologies, Inc., RR#1, Box 83A, Kelley, IA 50134 (515) 597-2051.
System 7, 32-bit, '040 cache clean and it supports the required
AppleEvents.

<MacRatt with FAX>
Terminal program for use with AEA's PK-232 multimode controller. Supports packet, CW, RTTY, AMTOR, and facsimile. Includes cable. Advanced Electronic Applications, P.O. Box C-2160, Lynnwood, WA 98036.

<Host Master 1.2>
The Kantronics Host Master software provides an easy to use, multifunctional terminal program for the TNC. Host Master Mac is a simultaneous multi-mode terminal program for the Mac written by Kevin Krueger, N0IOS and marketed by Kantronics. It is a commercial product available from most of the ham radio stores and supports single and multiple packet connects, packet monitoring, and HF operation (with KAM) each on a separate window, all at the same time. This package retails for $69.95 in the US and is intuitive, friendly, and well supported by Kantronics. Current version as of 10/20/93 is 1.2. It is hoped that a future version will support FAX but currently Hostmaster supports PACKET, AMTOR, RTTY, PACTOR (KAM ver. 6.0), CW, and NAVTEX. Features: text and binary file transfer; packet conferencing; color or B&W windows; cut, copy, paste between windows; call exchange and data/time stamp; auto startup/shutdown commands; transmit buffers for each mode; simultaneous dual port, multiple connects; supports KPC-2, KPC-2400, KPC-4, KAM and Data Engine. Requires: Macintosh Plus w/ System 6.05 or better. Current Kantronics firmware.
System 7 compatible, with baloon help

<PacketTracker 1.07>
PacketTracker ver 1.07 is a SHAREWARE program that monitors packet activity and keeps track of what is going on. It draws a graphical map showing who is talking to who and displays statistics of all current stations and keeps a running tally of activity. PacketTracker was written for both the casual packet user and the network manager or BBS operator. The casual packet user will be able to learn a great deal about what is happening in packet around him; which stations are generating the most data and what some of them are. he will be able to see graphically what stations he can hitdirectly and which ones he cannot. For the network manager and BBS operator, PacketTracker provides extensive insight to the operation of the local network and problems such as excessive retries on a path. It also allows for extensive logging of channel utilization and other pertinate information.
NOTE: This application requires the Apple's Serial Tool from the Communications Toolbox which is NOW included in the archive.
System 7

<MacAPRS>
There will soon be a Mac version of the APRS (Automatic Position Reporting System) software. Folks use this to collect packet beacons, plot channel activity, track chase vehicles for marathons, etc. When it's out, I'll let you know.

<DSK_Loader 1.0>
DSK_Loader is the Macintosh equivalent of the DOS program DSKL. With this program you can communicate with the DSK (DSP Starter Kit) from Texas

Instruments. This program bootloads a simple communications kernel and then loads other software using this kernel. Other options are: Fill DSK memory with a certain value; Dump DSK memory into a textwindow, for further processing; Execute programs on the DSK; Graph output from the DSK; Act as a dumb terminal to the DSK.
The DSK and thus DSK_Loader is most interesting for people who want to experiment with Digital Signal Processing at low costs. For HAM-Radio operators it is a very interesting piece of equipment, Some applications, like the KC7WW port of the W9GR filters are included.
This program is public domain so you can distribute it to others, put it on BBS's, FTP sides, etc. If you encounter some problem s, bugs, find language mistakes in the help-information (english is not my native tongue), or just want to know me that you use this program, feel free to write to the address below, by email, or just postal mail. Please add information about the system you use, and the application you use the DSK for. I also like to hear your wishes for future versions.
Author is available on the internet: G.Polder@CPRO.AGRO.NL. Gerrit Polder-PA3BYA, Prunus 8, 3904 LV Veenendaal, The Netherlands

*** RTTY ***
<MacTTY>
Decodes Baudot or ASCII transmissions. Can also be used for packet radio and other digital modes (including landline data communications). Includes split screen, a 15,000-character type-ahead buffer, and canned messages. Summit Concepts, Suite 102-190, 1840 41st Ave., Capitola, CA 95010.

<WeFaxWorks>
Weather facsimile terminal program for use with Kantronics TNCs. Kantronics rfconcepts, 1202 E. 23rd Street, Lawrence, KS 66046.

<MacMultiCom 1.0>
MFJ sells MacMultiCom 1.0 for their 1278 multimode controller. MacMultiCom supports all of the modes of the 1278: packet, rtty, ascii, pactor, amtor, gray scale faxes, and many different formats of color sstv. The program requires a minimum of a MacPlus and a hard disk. Requires a color Macintosh and System 7 for best results.
System 7

*** Logging ***
<Ham Radio Station Logbook>
HyperCard stack that stores and displays radio contact information. Automatically stamps entries with time and date. Contacts can be sorted by frequency, call sign, or date of contact. Includes report formats, a "Q-code" reference list, and on-line help. SanSoft, 892 E. Quail Place, Highlands Ranch, CO 80126. (The same program appears to be available from Heizer Software, 1941 Oak Park Blvd., Suite 30, Pleasant Hill, CA 94523.)

<FDLog!>
Contact logging and duping program. Can transmit any of ten programmable CW messages. Generates real-time statistics on QSO rates. System One Control, 3900 85th Ave N, Suite 200, Brooklyn Park, MN 55443.

<MacContest 3.5>
Allows real-time or post-contest logging of a wide variety of contests. Checks for dupes, figures scores instantly, and offers various printouts. Interfaces to TNCs for CW and RTTY contests, to DX packet clusters, to Kenwood transceivers, and to MacinTalk for easy post-contest entry. Gerald Eberle, HB9CEY, P.O. Box 13, CH-4417 Ziefen, Switzerland.

<LOGic>
(Macintosh version scheduled.) Lets you define the rules determining dupes (such as once per band or once per contest). Displays heading, distance, and other information about the country being worked. Automatically enters contact time; if interfaced directly to a radio, also enters the frequency, band, and mode. Shows status toward earning amateur-radio awards. User-definable database fields. Exchanges data with other programs. Personal Database Applications, 2634 Meadow Bend Court, Duluth, GA 30136.

<HF Logger 1.2>
A real fine HyperCard logging program! (hey... thats all I got!) N0QGQ

<Simple Log .2b>
This little utility is a handy way to create a logging file that you can later import into any data base for analysis, etc. It also shows you that just about anyone can use Think C and create something on the Mac! Let me know if you'd like the source code. WD1V @ WA1WOK.NH.USA.NA Author is John Seney - WD1V, e-mail address is jseney@aol.com. For a copy of this program, mail a SASE disk mailer and 800K disk to: John D. Seney, WD1V, 144 Pepperidge Dr., Manchester, NH 03103
System 7

<Marathon>
Contesting/logging- Have seen references to (March 92 CQ magazine) and heard good things about MARATHON by N 0 IOS. I believe a demo was available for $8. Last address known is: Kevin Krueger, N0IOS, 1780 Ruth St., St.Paul, MN 551O9

*** Callbook data tool ***
<Hamcall 2.0>
This is the application that is used to support Buckmaster's Hamcall CD-ROM. This application provides much more data than previous versions including lat and long coordinates. Allows search by callsign as well as Zip Code sorts.
More information at info@buck.com
System 7

<SAM>
Amateur Radio Callsign Database now supports Mac interface. No additional information at this time.

*** Propagation, gray line, DX headings *** <DX Map v1.1>
Displays a map of the world with the terminator. Gives location, prefixes, zone numbers, distance, and heading for any country you select. Freeware. Requires HyperCard 2.0. Available via anonymous FTP from

joker.optics.rochester.edu (in the /ham/dxmap directory). Or send a formatted 800K Macintosh disk with a stamped, self-addressed disk mailer to Len Saaf, NV2Z, 52 Raleigh Street, Rochester, NY 14620 (Internet: saaf@joker.optics.rochester.edu).

<SatTrak>
Primarily a satellite tracking program, but also calculates beam headings, Maidenhead grid locations, MUF plots, and band openings. Shareware. Available via anonymous FTP from sumex-aim.stanford.edu (/info-mac/app). Or send a formatted 800K or 14.MB Macintosh disk with stamped, self-addressed disk mailer to Mike Pflueger, WD8KPZ, 6207 W. Beverly Lane, Glendale, AZ 85306.

<Sun Clock>
Desk accessory. Displays a color map of the world, including the terminator. Indicates current time for any location. MLT Software, Inc., P.O. Box 368, Portland, OR 97207.

<DX Window>
Draws a great-circle world map centered on your QTH, with day/night terminator indicated. Displays over 400 DX locations with prefixes and beam headings. Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

<Skycom 1.1>
Enter solar flux and get propagation predictions to desired areas of the world. Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

<Skycom 1.5>
Provides sunlight status at both ends of a path; MUF, F0F2, and FOT frequencies; S/N ratio of the link; and other information. Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

<DX Helper v1.57B>
Displays beam heading, distance, gray line, and propagation information. Generates great-circle maps. Identifies prefixes, zones, and oblasts. Includes code practice. MacTrak Software, P.O. Box 1590, Port Orchard, WA 98336.

<Mac MiniMUF v5.1>
A greyline and propagation predictor based on the PC version of MiniMUF by K4CFV. It is available directly from him for the price of a formatted disk and SASE (disk mailer). His address in callbook or: Bob Stamper K4CFV, 12510 Shadowrun Blvd., Riverview, FL 33569

<Mac ShortWave v1.2>
A program called Mac Shortwave that figures MUF and LUF. BXA Research in Plano, Texas

*** Satellite tracking ***
<SatTrack v1.02>
Tracks one satellite across a world map as it moves, displays the instantaneous position of several satellites, or generates tables of all satellites visible from a certain location at a given time. Also

calculates beam headings, Maidenhead grid locations, and MUFs. Shareware. Available via anonymous FTP from sumex-aim.stanford.edu (/info-mac/app). Or send a formatted 800K Macintosh disk with stamped, self-addressed disk mailer to Mike Pflueger, WD8KPZ, 6207 W. Beverly Lane, Glendale, AZ 85306.
System 7 compatible.

<MacSat v3.1>
Tracks up to 21 satellites simultaneously, either in simulation or real-time mode. Text screen displays ground-track coordinates, range, mean anomaly, visibility (azimuth and elevation) and Doppler shift frequency information for all satellites being tracked. Graphical screen portrays the satellite ground tracks superimposed on a world map. Polar plot displays graphically the precise location of each visible satellite above the observer's horizon. Developed by the Geodetic Research Laboratory of the University of New Brunswick. Available from Richard B. Langley, R.R. 12, Fredericton, N.B. E3B 6H7, Canada (Internet: lang@unb.ca). A demo version of MacSat may be ftp'ed from directory PUB.CANSPACE on unbmvs1.csd.unb.ca.
System 7

<OrbiTrack>
<OrbiTrackFPU v2.1.4>
Calculates look angles to selected satellites, plots current satellite positions on a world map, and displays the visible passage of a satellite against background stars (either within the program itself or via a data file that can be read into the Voyager astronomy program). Please note that one version requires an FPU to operate! BEK Developers, P.O. Box 47114, St. Petersburg, FL 33743. (Bill Bard, CompuServe: 75366,2557)
(Note: This replaces BEK's previous MacSat program, which was not related to the program of the same name from UNB.)
System 7 compatible

<QuikMac>
Macintosh version of N4HY's QuikTrak program. Requires Microsoft BASIC. AMSAT, P.O. Box 27, Washington, DC 20044.

<Satellite Orbit Prediction Program>
Macintosh conversion of W3IWI program. Requires Microsoft BASIC. Send formatted 800K Macintosh disk with stamped, self-addressed disk mailer to Earl Skelton, N3ES, 6311 29th Place NW, Washington, DC 20015. Or send self-addressed stamped envelope for source listing.

<Satellite Pro>
Uses world maps and tables to indicate rising and setting schedules, current locations, mutual visibility opportunities, and footprints. Includes Mercator, polar, and great-circle displays. Optional antenna control. MacTrak Software, P.O. Box 1590, Port Orchard, WA 98366.

<MacSPOC>
Author is on AOL and can be reached as adamod@aol.com via the internet. The "demo" versions can be found at ucsd.edu.

*** Antenna design ***
<MacMiniNEC>
Chris Smolinski, N3JLY, 40 South Lake Way, Reisterstown, MD 21136.

*** Radio control ***
<ICOM Radio Control>
Provides a Macintosh interface for controlling ICOM transceivers that use the CI-V remote-control system. Lets you quickly change frequencies and modes. Also does logging and duping. Requires a CI-V to RS-422 converter (schematic included with program).
KE6FG Software, 9763 Pali Avenue, Tujunga, CA 91042.

<FreqValet>
Provides frequencies and DX program info for shortwave radio listeners. The program databases update automatically at 15, 30, or 60 minute intervals, thus providing a continuous display of broadcasts on-the-air at any given time in a spreadsheet like format. Features include sorting of data, scanning, and on-screen changing of databases. The program will convert Tom Sundstrom's dBase shorwave broadcast listing to FreqValet format and will do the same for Shorwave Navigator users. Separate cards are provided for DX Programs, Ship to Shore, and Utility broadcasts. Computer control modules are available at extra cost for the Drake R8, Kenwood R-5000, JRC NRD-525, and NRD-535 receivers.
DX Computing, 232 Squaw Creek Road, Willow Park, TX 76087. Telephone (817) 441-9188 or (817) 441-5555 (fax). Author is available via internet: dxcomp@aol.com System 7 with HyperCard 2.1

*** Ham radio BBSs ***
<Digikron Systems BBS>
Various ham-related applications, including logging, propagation, Morse code, and packet. (408) 253-1309.

<N8EMR BBS>
Various ham-related files, including packet, DXing, and contesting software; AMSAT bulletins; and several ham newsletters. (614) 895-2553. Also available via FTP on AMPRnet at 44.70.0.1.

<WB3FFV BBS>
Various ham-related software, including packet, contesting, and Morse code applications. (410) 661-2475, 661-2598, and 661-2648.

<ChowdaNet BBS>
(more info at a later date)

<Gallery's BBS>
Gallery's BBS is now available to the general public.Specializing in Amateur Radio shareware for the Macintosh computer.The board is open 24hours a day,7 days a week at 202-298-6009.Supports up to 9600 bd connections.Give it a call today! e-mail queries to:paulot@cais.com or N3MGA@WA3TAI.MD.NOAM

*** Online Services carrying Ham Radio software ***
<America Online>
Supports Macintosh, PC's DOS & Windows versions, PS/1, Apple //s, Casio

Zoomer. Ham Radio Club (keyword = ham radio) supports all computer types. Software for amateur radio, scanners, swl'ers and general electronics. For 10 FREE hours of trial time send your snail mail address to tstader@aol.com or call 1-800-827-6364 Ext. 6285. This site NOT ftp'able (yet). Internet e-mail.

<CompuServe>
Supports any communications software on most computers Ham Radio area (go hamnet) supports all types of communications formats. Call 1-800-848-8199 for information. This site NOT ftp'able. Internet e-mail.

<Delphi>
(more info at a later date) Internet e-mail

<GEnie>
(more info at a later date) Internet e-mail

<Prodigy>
Has ham radio message areas, no downloadable software. Limited internet e-mail.

4765. Re: Restrictive Covenants: I can't have *any* antenna?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-27 23:01:59 UTC
From: turner@safety.ics.uci.edu
Message-ID: <36a897$smi@safety.ics.uci.edu>
Source record: 259512

In <linleyCwq5sv.32x@netcom.com> linley@netcom.com (Bruce James Robert Linley) writes:

>>This is NOT correct. Any judge I know would laugh you out of the courtroom,
>>or maybe fine you and your attorney for wasting the court's time. The intent
>>of the provision is clear, little loopholes are not respected in real

>Yes. The intent is very clear. The intent is to prohibit all forms of
>decent TV reception leaving you no choice but to subscribe to the local
>cable TV monopoly. You have no problem with this? I find this type of

I have a personal problem with this, yes. However, the intent of the
whole passage (and it would need to be read in the context of the whole
restriction) is clearly to prevent "ugly antennas" up on the local
houses. There MAY be an argument here based on some little technicality
about "TV" antennas versus "amateur" antennas, or based on "entertainment"
or something, but again, this seems very weak to me in my experience. If
you think it is a good argument, good luck!!

.....
>Loopholes do not get cast aside just because some courts find them
>irritating. Legal contracts have to be excruciatingly precise or
>they're worthless. A good lawyer (unaffordable by most) can take advantage
>of loopholes (though, the case may take years to reach completion). In

Wow, where do you practice? I have not had many of these experiences you
seem to point to..... And, "legal" contracts don't have to be
"excruciatingly precise or they're worthless" - not in Courts I have
argued in. It all comes down to common sense in most cases. There
are always exceptions, but they are few. Again, I repeat, it all
comes down to COMMON SENSE. In other words, if you don't dot the "i"
in some contract clause, judges don't invalidate the contract. They
merely dot the "i" for you.

>quite a few instances, restrictive CC&Rs have been declared null and
>void due to a lack of (or uneven) enforcement of the restrictions.

This is a clear violation of contract law, not a loophole in any sense
of the word. Please check the law. Any contract party can waive
rights, that is well known for hundreds of years, no special loophole
there.

>Please check your facts before saying loopholes don't work in real
>courtrooms. And do not discourage people from fighting unfair practices
>because "they'll always lose." The little guy is right sometimes.

I don't understand your point here. I have been in a lot of courtrooms,
and I advocate strong arguments and common sense. You're interpretation

of these may differ, but my point remains. If you have spend more time arguing contract cases than I have, you might give me more of your argument.

I don't appreciate the "straw man" you knock down by implying that I discourage people from fighting unfair practices. That is just plain wrong. I encourage it to be done, but in a way that will be reasonably calculated to win. I do it all the time.

Ah, yet another unusual unique need...

I'm at the R/C model field. I have my new micro-miniature camera and ATV tranmitter in the airplane. I have this wonderful expensive camcorder that can act as a VCR on batteries. I have my ATV downconverter. I want to fly the plane and capture the moments forever on metal particle tape.

Only one small problem. I can't get from Channel 3 (output from ATV downconverter) to the VCR (NTSC input).

The only commercial solution I've seen if from PC Electronics in the form of a very nice receiver (~$100). Since I spent so much money on the micro-miniature camera and ATV transmitter, I'd sure like to find an inexpensive solution to this problem.

Any suggestions?

Thanks and regards,
Greg

>sent out on FM.

>The reason I ask is because I'd like to receive the slow-code and fast-code
>practice sessions sent out by W1AW on 147.555 MHz. Problem is, I've never
>been able to get anything. I've not been able to receive W1AW voice broadcasts
>either, so maybe I just need to get up on a hill or replace the rubber duck
>with something better.

Your scanner can surely pick up a A1A signal just as it would any other
unmodulated carrier. But all you will hear is the keying of the carrier
unless you have a BFO. W1AW is in Newington, CT - is someone carrying their
code practice on 147.555 in Washington state? Or are you expecting to hear
147 Mhz signals from Connecticut? Probably not going to happen.

4769. Re: MFJ Service

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-27 23:37:41 UTC
From: clifto@indep1.chi.il.us
Message-ID: <CwtAyu.JBB@indep1.chi.il.us>
Source record: 259519

I have to say that their service is pretty damn good. A few years ago I bought one of their speaker-mikes, and shortly thereafter the speaker in it died. The local company that sold it to me refused to return my phone calls. I got hot and blasted MFJ in a packet message. A couple of days later, on a Friday, I got a US Snail message from them, offering to make good on the mike if I'd return it. Monday, without further action on my part, a brand new speaker-mike arrived in the mail.

I'd say that's pretty good.

Legally, yes. In practical terms, just _try_ to get them to admit that
it's their responsibility. Succeeding at that, just _try_ to get them to
do something about it before the neighbors pin your coax, bomb your tower,
slash your tires and kidnap your kids.

Dave, I think you are hoping for a bit much to receive W1AW on 147MHz in Vancouver, WA. -- There are lots of code practice programs for computers kicking around; perhaps that would help you. You could put the output onto cassette tapes, if you don't have a computer available where you want to practice.

This reminds me of something we are looking at adding to our club repeater, which doesn't get a whole lot of use (the 440 repeaters around here are fairly quiet most of the time). We are looking at adding code practice which could come up at specific times/days, and also be brought up with touch-tone access; the latter would probably be limited to club-member access. I'm wondering if people in netland who are interested in learning code would find something like that useful. Comments?

>another reason why AM was used there and is still used on aircraft?

The doppler effect for a low orbit spacecraft will provide about 3 kHz of
shift from the center frequency at 146 MHz. Since copy is quite adequate
with my 2 meter rig tuned 5 kHz off channel, I don't think Doppler is a
big part of the issue.

>What about weight? Weight is not a problem with land mobile but every ounce
>counts on spacecraft/aircraft. Does a comparable NBMF radio weigh more than
>an AM radio? One of the first FM applications were radios on WWII battle
>tanks.

My FM radios are smaller than the AM radios in the aircraft. In fact,
one of the aircraft radio manufacturer's managed to get the aircraft AM
radios smaller by replacing the modulation transformer with a switching
power supply controlled by the modulating signal.

I would expect FM to be smaller than AM. Class C amplifiers are more
efficient and use less power, as well.

There are Federal regulations and decisons that say communities cannot put unreasonable restrictions on Hams. These have been used sucessfully in some cases to get antenna restrictions relieved. Communications control is the pervue of the FCC not the community or a developer.

>learning about amateur radio. (e.g., is 2-m the `best' for me, 440?,
>what can i do with the new Technician license, etc.)

Patrick - contact your local Amateur Radio Club! There's a wealth of information there for you.

If you cannot locate a local group, look around your neighborhood for a house with plenty of antennas on it! During daylight hours, go up to the door and ask the resident if she/he is an Amateur radio Operator! Bet you you'll find a lot of information on what's happening locally!

The ARRL has a new Amateur packet of info waiting for you - contact them at 1-800-32-NEW-HAM. Call the NARA, too, for a free package: 1-800-468-2426.

: In my previous post, I was just trying to point out that the technique
: of learning at higher Farnsworth rates has its own drawbacks, as it tends
: to avoid the need to translate one letter while simultaneously listening
: to the next.

: -Brian
: suggs@tcville.es.hac.com

Understood. I see how that could be a problem...becoming dependent
upon the extra translation time.

It has been a long time since I learned and became proficient at
copying code, so I've probably forgotten all the difficulties
involved. But I believe that as long as one needs to _consciously_
translate the sound into the letter, speed will be limited...usually
to the 10-12 wpm level. How do you reach the point of "instant"
translation? Seems like lots and lots of use is the only real way to
do it...I don't think there is any trick or technique you can use to
achieve that level. That may be the source of frustration facing a
lot of people today...there is no way of becoming truely proficient at
code by "practicing" or running computer programs or listening to code
tapes.

Again, good luck, Brian!

The bottom line is Tucker is a very reputable dealer who has been around
for years and knows (remembers) what customer service is. Their prices
will never be the lowest, but this is not a garage operation and they
will be around. If you want som'tin for nut'in as the CW posting went,
don't bother with Tucker.

I will admit that their used commercial equipment pricing is out of touch
with reality..(goes back to when there was a military budget and
when an ambitious sub would pay the price.......they're a little
sleepy on this part)

......jes depends on how bad you want it......

Guess not.

It will be all but impossible for you to receive W1AW's VHF transmissions
if you're in Vancouver.

Some repeaters have audio Morse Code practice... Perhaps you can check
with local repeater clubs to find out if it is available in your area.

Good luck!

The reason you can't, is that VHF is line of sight, so if you're farther than
20-50 miles (since W1AW is in Connecticut..), you won't be able to hear it.
Look for a cheap shortwave radio at a yard sale, with a "BFO" control.

Pennsylvania QSO Party Newsletter #2 (9/23/94)

Two weeks and counting! Just two weekends left to get those antennas up, clear off the desk of all that junk, xerox all the log sheets you need, clear some RAM for all those QSO's in the computer program, and make arrangements to send the family to the inlaws for the weekend! October 8 and 9 approaches!

Itching to tune up for the big one? You might try the California QSO Party next weekend -October 1 and 2. Usually good participation from Calif. stations and, although conditions have not been good for the west coast, 20 meters is open during the afternoon followed by 40m in early evening and finally 80 meters by our midnight (80/75 M activity period at 0300 & 0700 UTC -160 m at 0500 UTC)! Their mailing promises full attendance from all 58 counties.

Meanwhile, back at the Pennsy ranch, WA3NVS is going to try mobile from the northern tier counties including Elk and Potter, two much in demand last year. (Remember that the 5 kc below the announced frequencies are for mobiles: NOT FOR HOME KILOWATTS! - some forgot this last year!) Ike, WA3DBW, is back from Florida and will keep Huntingdon alive. Said he enjoyed working the Party from W4 land last year but, hey guys, don't forget 20 meters once in a while! WC3G plans to repeat his big showing from Bedford County which makes all of us happy and the WI8T or WX8G gang from the Alliance Radio Club (Ohio) will be back in Indiana County. They also requested more log sheets and hope to have the Alliance Club competitive among the clubs! Word from Vic, N3IQD, has he and N3SIG going off to Franklin County, another southern tier "rarey" while George, KA3JWJ, and Mark, KA3WSW, hope to make Armstrong more available this year.

Still haven't heard about Wayne, Philadelphia, Greene or Delaware Counties yet so if you are in those counties or near by, please try to get them active! I do know that Adams will NOT be too active this year as Ken, K3ONW, the normal activity anchor, will not be able to make it this year so this will also be a rare county.

That's it for now. Get the clubs talking and let's keep the activity way up this year. Good luck and see you on October 8 & 9.

Pennsylvania QSO Party Newsletter #4 (9/27/94)

Interest is definitely on the rise! We are getting reports of lots of planned activity and portable operations and will try to keep you up to date. Latest news from the Hilltoppers from the Pittsburgh area has the following members gearing up for a big weekend: N3IXR and N3BGV, big winners last year in West Pa. will be a multi-multi operation on the tri-county line of Somerset, Fayette, and Westmoreland. Three big problems last year, should be solved with one quick QSO this year! Thanks to Bob and Ed for their efforts. Also from the Hilltoppers, Mike, WB5NLJ, will be in Greene County, while Eric, N3KMJ will be at home in Washington County as will Keith, WA3HAE, who will make Allegheny readily available.

The Penn Wireless Association, one of the clubs which helped initiate the revitalization of the QSO Party back in the late '70s, continues its support with a multi-multi (single?) operation with the club station, W3SK, in Potter County.

The Delaware Lehigh Club is again putting in a big effort and reports that N0KIA will be portable in Union County. Meanwhile, from the Camp Hill/Harrisburg area, W8IJ will have the car all tuned and ready for a mobile jaunt through Perry, Juniata, Mifflin, and lets hope Dave also activates Cumberland (his home county) and nearby Adams as those are two equally difficult ones to get.

The special events station of the Nittany Amateur Radio Club, W3YA, will be operating from their VHF site on the Centre Huntingdon county line, with a new multi-bander at 60', dipoles for 80 and 40, and If I can find the right box in the basement, a inverted vee on 160M. We will be barefoot unless someone can find 6 electrolytic capacitors for the linear (SB200) (125 MF at 450 Volts) which are about 1.5 inches in diameter. Any one out there help?? If not, we are hoping that the 2000 ft plus height will raise the "S" units!

Finally, a note from "The Voice of Experience": During the last bottom of the sunspot cycle, 40 meters NEVER opened to local Pennsylvania QSOs during the day because of conditions. IF THAT HAPPENS, try 80 meters as a good alternative.

That's it for now. We'll keep you up to date as more information comes in. Again, if you need a log/summary information packet, drop a note via packet to K3CM@W3YA.PA.USA.NOAM. or via e-mail to

cwm3@psu.edu.

73, Doug, W3HDH & Chuck, K3CM.

Pennsylvania QSO Party Newsletter #3 (9/23/94)

Two weeks and counting! Just two weekends left to get those antennas up, clear off the desk of all that junk, xerox all the log sheets you need, clear some RAM for all those QSO's in the computer program, and make arrangements to send the family to the inlaws for the weekend! October 8 and 9 approaches!

Itching to tune up for the big one? You might try the California QSO Party next weekend -October 1 and 2. Usually good participation from Calif. stations and, although conditions have not been good for the west coast, 20 meters is open during the afternoon followed by 40m in early evening and finally 80 meters by our midnight (80/75 M activity period at 0300 & 0700 UTC -160 m at 0500 UTC)! Their mailing promises full attendance from all 58 counties.

Meanwhile, back at the Pennsy ranch, WA3NVS is going to try mobile from the northern tier counties including Elk and Potter, two much in demand last year. (Remember that the 5 kc below the announced frequencies are for mobiles: NOT FOR HOME KILOWATTS! - some forgot this last year!) Ike, WA3DBW, is back from Florida and will keep Huntingdon alive. Said he enjoyed working the Party from W4 land last year but, hey guys, don't forget 20 meters once in a while! WC3G plans to repeat his big showing from Bedford County which makes all of us happy and the WI8T or WX8G gang from the Alliance Radio Club (Ohio) will be back in Indiana County. They also requested more log sheets and hope to have the Alliance Club competitive among the clubs! Word from Vic, N3IQD, has he and N3SIG going off to Franklin County, another southern tier "rarey" while George, KA3JWJ, and Mark, KA3WSW, hope to make Armstrong more available this year.

Still haven't heard about Wayne, Philadelphia, Greene or Delaware Counties yet so if you are in those counties or near by, please try to get them active! I do know that Adams will NOT be too active this year as Ken, K3ONW, the normal activity anchor, will not be able to make it this year so this will also be a rare county.

That's it for now. Get the clubs talking and let's keep the activity way up this year. Good luck and see you on October 8 & 9.

73. Doug W3HDH and Chuck K3CM.

4788. PA QSO PARTY NEWS #4

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-28 03:48:45 UTC

Pennsylvania QSO Party Newsletter #4 (9/27/94)

Interest is definitely on the rise! We are getting reports of lots of planned activity and portable operations and will try to keep you up to date. Latest news from the Hilltoppers from the Pittsburgh area has the following members gearing up for a big weekend: N3IXR and N3BGV, big winners last year in West Pa. will be a multi-multi operation on the tri-county line of Somerset, Fayette, and Westmoreland. Three big problems last year, should be solved with one quick QSO this year! Thanks to Bob and Ed for their efforts. Also from the Hilltoppers, Mike, WB5NLJ, will be in Greene County, while Eric, N3KMJ will be at home in Washington County as will Keith, WA3HAE, who will make Allegheny readily available.

The Penn Wireless Association, one of the clubs which helped initiate the revitalization of the QSO Party back in the late '70s, continues its support with a multi-multi (single?) operation with the club station, W3SK, in Potter County.

The Delaware Lehigh Club is again putting in a big effort and reports that N0KIA will be portable in Union County. Meanwhile, from the Camp Hill/Harrisburg area, W8IJ will have the car all tuned and ready for a mobile jaunt through Perry, Juniata, Mifflin, and lets hope Dave also activates Cumberland (his home county) and nearby Adams as those are two equally difficult ones to get.

The special events station of the Nittany Amateur Radio Club, W3YA, will be operating from their VHF site on the Centre Huntingdon county line, with a new multi-bander at 60', dipoles for 80 and 40, and If I can find the right box in the basement, a inverted vee on 160M. We will be barefoot unless someone can find 6 electrolytic capacitors for the linear (SB200) (125 MF at 450 Volts) which are about 1.5 inches in diameter. Any one out there help?? If not, we are hoping that the 2000 ft plus height will raise the "S" units!

Finally, a note from "The Voice of Experience": During the last bottom of the sunspot cycle, 40 meters NEVER opened to local Pennsylvania QSOs during the day because of conditions. IF THAT HAPPENS, try 80 meters as a good alternative.

That's it for now. We'll keep you up to date as more information comes in. Again, if you need a log/summary information packet,

drop a note via packet to K3CM@W3YA.PA.USA.NOAM. or via e-mail to cwm3@psu.edu.

73, Doug, W3HDH & Chuck, K3CM.

4793. QUESTION: Transmission Line Model

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-28 05:04:35 UTC
From: haas@quads.uchicago.edu
Message-ID: <1994Sep28.050435.9878@midway.uchicago.edu>
Source record: 259527

Dear Readers,

I am interested in formulating a mathematical model that governs the
propagation of signals down a twisted pair line. I believe that the
model of the line should be something like
(i),(i+1) = junctions
Gnd. Gnd. L = inductor, R=resistor
| | C1, C2 = capicitors.
C1 C1 The figure then extends indefinitely.
| | I would like to formulate the
(1)-----L---R--(i)---L---R--(i+1)--etc differential equations in terms of
| | V1(i), V2(i)'s = voltages at
C2 C2 the junctions i in lines (1) and (2),
| | and the currents I1(i) I2(i) through
(2)-----L---R--(i)---L---R--(i+1)--etc the various components. One important
| | factor that I would like to take into
C1 C1 consideration is that of mutual
| | inductance - a back EMF set up in
Gnd. Gnd. line 1 caused by a change in current
in line 2 (and in 2 from 1). For
simplicity, we will denote the mutual inductance by M.
As I am sure that this has been done any number of times by so many clever
engineers and physicists, could someone either tell me an easy way to set
up the differential equations (w.r.t. d/dt) or point me to a good source
which discusses this topic ad nauseum? I expect two second order differential
equations in t which are linked together by a single term, but I am not
100% sure (as I am not a physicist/engineer!). Thank you very much for your
time!

NOTE: The Effective Sunspot Number for 25 SEP 94 was 21.3.
The Full Kp Indices for 25 SEP 94 are: 2- 1o 1o 0o 2- 2o 4+ 4-
The 3-Hr Ap Indices for 25 SEP 94 are: 7 4 4 1 7 8 33 25
Greater than 2 MeV Electron Fluence for 26 SEP is: 3.1E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. No flares were reported
this period. Region 7781 (S07W47) indicated slight areal
growth in the leader spot group while losing most of its
trailer spots. Region 7782 (N03W48) grew slightly in both area
and spot number. New Region 7783 (S07E74) was numbered this
period as an HSX alpha group.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at mostly unsettled to
active levels for the past 24 hours. A period of minor to
major storm conditions existed at all latitudes from 26/09-15Z.
This activity may be associated with a small coronal hole. The
greater than 2 MeV energetic electron flux was mostly normal to
moderate but became high after 26/1800Z.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly quiet to unsettled for the next three
days. Occasional active conditions could exist at high
latitudes.

Event probabilities 27 sep-29 sep

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 27 sep-29 sep

A. Middle Latitudes
Active 30/15/10
Minor Storm 15/10/05
Major-Severe Storm 05/05/01

B. High Latitudes
Active 35/15/15
Minor Storm 15/10/05
Major-Severe Storm 05/05/01

HF propagation conditions were near-normal for low and
middle latitude paths. High and polar latitude paths saw
below-normal propagation, particularly on night-crossing
circuits where enhanced geomagnetic and auroral activity were
responsible for producing increased multipathing and
absorption. Similar conditions are expected through 29
September before improvements begin setting in.

Shielding a computer is very difficult, but if you could put the whole computer with all its peripherals in a metal box (and rf filter all the leads incl. the power cables), in principle you could do it, but my point is that there is no need to use lead (this is not atomic radiation, but RF), so alum. or copper would do, and the metal used can be very thin (as long as it is several skin depth), i.e. 1/64" would be fine.
Cheers.
(PS computers should really be used in screened rooms - mine radiates like hell!)

The 3-Hr Ap Indices for 26 SEP 94 are: 20 29 31 48 17 7 9 8
Greater than 2 MeV Electron Fluence for 27 SEP is: 6.4E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. Four weak B-blass x-ray
events occurred this period -- 2 optically uncorrelated and 2
optically correlated with Region 7781 (S06W61). The largest of
these flares was a B2/SF which maxed at 27/1515UT. All regions
exhibit slow decay.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at quiet to active levels
for the past 24 hours. A brief period of major storm levels
was reached at high latitudes from 27/0900 - 1200UT. The
greater than 2 MeV energetic electron flux was mostly moderate
reaching high levels after 27/1800UT.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly quiet to unsettled for the next three
days. Occasional active conditions could exist at high
latitudes on day one of the forecast period.

Event probabilities 28 sep-30 sep

Class M 01/01/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 28 sep-30 sep

A. Middle Latitudes
Active 30/20/10
Minor Storm 10/05/05
Major-Severe Storm 05/01/01

B. High Latitudes
Active 35/20/15
Minor Storm 20/15/10
Major-Severe Storm 05/05/01

HF propagation conditions were near-normal to slightly
below-normal over the low and (particularly) middle latitudes,
with generally below-normal propagation over the high and polar
latitude paths. Continuing geomagnetic and auroral activity
over the high and polar night-sectors contributed to this
signal degradation. Conditions should begin improving as this
disturbance wanes over the next 24 to 48 hours. Near-normal
propagation should return by about 30 September.

I have a Pk-232-MBX in 'very' good condition. It has 01 AUG. 91 firmware chips installed { 18k plus in the MBX } and comes with the $75. We-Fax cable and manual. I also have the original carton for this critter as well.

I am thinking that $200. would be ok for this unit { shipping via U.P.S. etc. won't be that much extra from Berkeley }.

Just drop me a reply here if you have any questions that I can help you with re: the unit.

Sincerly;

Randy Kielich N6WDV randyk@c2.org

JH>in the to arrive mail] Can anyone recommend a source of information
JH>in the regarding hamfests Southern NJ/NY/Eastern PA area? I really
JH>like going to these things - but I just don't know how to find 'em.

JH>For anyone living in NY, I heard about one tomorrow morning at the
JH>Lincoln High School in Yonkers, NY - and one in Queens, NY the
JH>following Sunday - if anyone has any info on either please feel free
JH>to mail me...thanx in advance

Usually the one at Lincoln High School is a dog but this year it was an excellent turn out though the choice of equipment was very limited. I haven't been to the Hall of Science in years so couldn't tell you about it of recent vintage. Saturday in Teaneck at FDU I believe there will be a excellent Hamfest (October 8th) which if you really like hamfest you shouldn't miss.

. CMPQwk 1.4 #9206 . What has four legs and an arm? A happy pit bull.

That's funny. At one time in my life I did business phone systems -
Electronic Key, 1A2 (remember the thick 25 pair wire?) and PBX.
I spent several weekends working for electrical contractors wiring the
houses in new tracts for phones, and teaching the contractors how to do
it right (i.e. use 3 pair jacketed rather than quad, do home runs rather
than daisy chain, etc). It seems (well, not having recent data, seemed)
that the builders hired the electricians to do power, TV, phone, intrusion
alarm and intercom speakers for the tracts I worked on. The CATV guys didn't
get past the curb. And all the houses had at least 1 run of RG-59 to
the rooftops - inside flex conduit...

!!END-DATA!!

NOTE: The Effective Sunspot Number for 24 SEP 94 was 21.9.
The Full Kp Indices for 24 SEP 94 are: 2o 3- 2- 1- 1- 1+ 1o 2-
The 3-Hr Ap Indices for 24 SEP 94 are: 9 13 6 3 3 5 4 7
Greater than 2 MeV Electron Fluence for 25 SEP is: 6.9E+06

SYNOPSIS OF ACTIVITY

Solar activity was very low. New Region 7782 (N02W37)
produced the only flare, a B1/SF at 25/1927Z. This small region
emerged to the northwest of Region 7781 (S07W34).

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field was quiet until about 25/1800Z and
unsettled to active after that. This new activity may be
associated with a small coronal hole. The greater than 2 MeV

electron flux at geosynchronous altitude was moderate after
about 25/1830Z.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly unsettled with an occasional active
period at high latitudes.

Event probabilities 26 sep-28 sep

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 26 sep-28 sep

A. Middle Latitudes
Active 30/30/15
Minor Storm 15/15/10
Major-Severe Storm 05/05/05

B. High Latitudes
Active 35/35/15
Minor Storm 15/15/10
Major-Severe Storm 05/05/05

HF propagation conditions were near-normal over most
regions today. Signals over the high and polar latitudes have
begun showing signs of minor signal degradation late in the UTC
day associated with enhanced geomagnetic and auroral activity.
Similar conditions are expected over the next 72 hours, through
28 September inclusive.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

4801. How to find the answers to frequently-asked questions about Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-28 09:44:35 UTC
From: ikluft@oes.amdahl.com
Message-ID: <ham-faq-ptr-1-780745444@oes.amdahl.com>
Source record: 259390
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Posted-By: auto-faq 3.1.1.4
Archive-name: ham-faq-ptr

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
---

This article will tell you how to find the answers to frequently-asked Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on the 7th and 21st of each month. This article is posted on the 14th and 28th of every month as a reminder of where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP and from e-mail servers. This article contains instructions for obtaining a copy of the FAQ. It also contains the table of contents from the FAQ so that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good signal-to-noise ratio in the newsgroup. However, they can't do it alone - you, the reader, have to use them. If you are a new user, please print and review the FAQ articles and look at the instructions in the news.newusers newsgroup before posting any articles. If you are an experienced user, please help by refraining from answering frequently-asked questions on the newsgroup if they are already answered by the FAQ articles. Instead, send e-mail to the user who asked the question. (It will be helpful if you include the part of the FAQ that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ---

There are 7 ways to obtain a copy of the FAQ.
1) World-Wide Web (WWW) and Mosaic
2) NetNews
3) Anonymous FTP
4) An Electronic Mail Server
5) Mail List Subscription
6) Gopher
7) Wide Area Information Server (WAIS)

Option #1: World-Wide Web (WWW) and Mosaic

The World-Wide Web (WWW) has experienced explosive growth in usage in 1993

and 1994. WWW clients like Lynx (in ASCII text) or Mosaic (X/Mac/Windows) can display the FAQ from many different sources. Each source is named by a URL (uniform resource locator.) If you are one of the growing numbers of people with Internet access, Option #1 is your choice. The following URL can be used to find the FAQ:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/faq/top.html

Other services listed later in this article are also accessible with WWW at the following URLs:
news:rec.radio.info
file://ftp.amdahl.com/pub/radio/amateur
file://ftp.cs.buffalo.edu/pub/ham-radio
file://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq
file://grivel.une.edu.au/pub/ham-radio/buffalo/ham-radio
file://nic.funet.fi/pub/ham/info
gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/
wais://rtfm.mit.edu/usenet

For more information on WWW, see the comp.infosystems.www newsgroup. Also, the help options on your WWW client should be able to point you to lots of information all over the world.

Option #2: NetNews

If you are familiar enough with NetNews to look through previous articles on your system, Option #2 above may be the easiest for you. The FAQ is posted so that it should not expire from your site's news spool until the next one is posted. Unfortunately, some news administrators do not honor the expiration dates meant to preserve the FAQ.

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers. If the FAQ has expired at your site, try Option #3 (and ask your news administrator to honor expiration dates for articles cross-posted to news.answers if he/she can.)

Option #3: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only available to sites which are directly connected to the Internet. If you don't know how to use FTP and can't find a friend to help you, continue to Option #4. If your site is not connected to the Internet, you should also continue to Option #4.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
------------------ --------------------
ftp.amdahl.com pub/radio/amateur/faq.[1-3].Z
located in western USA, FAQ updated daily

ftp.cs.buffalo.edu pub/ham-radio/faq_ham_[1-3]
located in eastern USA, FAQ updated monthly
rtfm.mit.edu pub/usenet/news.answers/radio/ham-radio/faq/part*
located in eastern USA, FAQ updated monthly
contains news.answers archive - most UseNet FAQs are here
grivel.une.edu.au pub/ham-radio/buffalo/ham-radio/faq_ham_[1-3]
located in Australia, FAQ updated monthly
(Ham files mirrored from buffalo/funet/ucsd daily)
nic.funet.fi pub/ham/info/faq_ham_[1-3]
located in Finland, FAQ updated monthly

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #4: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the first line of your message:
send usenet/news.answers/radio/ham-radio/faq/*

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org
Date: Mon Aug 14 22:27:33 PDT 1995

send usenet/news.answers/radio/ham-radio/faq/*
--- end sample mail message ---

Option #5: Mail List Subscription

If you prefer, you may get the FAQ and other periodic Ham Radio information
as it gets posted. All the information posted to rec.radio.info can be
obtained through the UCSD list server via the "radio-info" mail list. To
subscribe, send an e-mail to
listserv@ucsd.edu
Similar to the e-mail server listed above, just send a single-line message
subscribe radio-info
If you need more information, the listserv program also accepts a "help"
command. Just keep it on a separate line in the message.

Option #6: Gopher

You can access gopher servers on TCP port 70 (gopher protocol) at the
following locations which carry the Ham Radio FAQ:
cc1.kuleuven.ac.be

jupiter.sun.csd.unb.ca
gopher.univ-lyon1.fr
ftp.win.tue.nl
gopher.win.tue.nl
For more information on gopher, see the comp.infosystems.gopher newsgroup.

Option #7: Wide Area Information Server (WAIS)

In addition to the other services mentioned above, rtfm.mit.edu offers a
WAIS server on TCP port 210. Use the "usenet" database to access the FAQ.

For more information on WAIS, see the comp.infosystems.wais newsgroup.

Table of Contents

Dates indicate last modification.

Part 1 - Introduction to the FAQ and Amateur Radio
** Table of Contents (6/93)
** Introduction to the FAQ (11/92)
* How to Contribute to the FAQ Articles (6/93)
* Please Do Not Ask Questions of the Editors (8/94)

* Acknowledgements (6/93)
* Notes on "Netiquette" (1/93)
** What is Amateur Radio? (11/92)
** Who can become a ham? (6/93)
** Where can I locate information and books on Amateur Radio? (9/93)
** How much does it cost? (9/92)
** Where can I take the tests? (9/93)
** What are the tests like? (6/93)
** What can I do with a ham radio license? (5/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (2/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)

** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Asking Questions---

If you have questions about Amateur Radio (a.k.a. Ham Radio), please read the FAQ. If your question is not answered there, check if you have any other sources (i.e. Mosaic/WWW) before proceeding. If you still don't have an answer, post your question to the most appropriate rec.radio.amateur.* newsgroup. And be sure to mention where you have already looked for the answer so people won't mistakenly tell you to try them again.

Thank you for doing your part to conserve network bandwidth!

--Submitting changes for the FAQ----------

If you have comments or updates for the FAQ, send e-mail to
hamradio-faq@amdahl.com
This will send mail to all the people on the FAQ editorial review group.

--Call for FAQ Editors----------

As with any volunteer effort, new volunteers are often needed. We need a new editor to post the Ham Radio FAQ. Preferably this should be someone who has enthusiasm for Ham Radio, experience with UseNet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby so the editorial review group is intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is written in PERL. So it would be a plus for volunteers to post the FAQ to have PERL installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact hamradio-faq@amdahl.com.

4802. VTVMs? Anybody use these anymore?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-28 10:32:01 UTC
From: randolph@est.enet.dec.com
Message-ID: <36butn$18f@mrnews.mro.dec.com>
Source record: 259449

I picked up a neat old VTVM ("Knight" by Allied Radio) for $3 at a flea this past weekend. So far I've determined that it works 100% so far as I can tell, and that the input is 10Mohms.

Anybody still use these things? Any thoughts on a probe for it? How about calibrating it? I'm gonna measure a few 1% resistors to get that scale set, but I dunno about the voltage scales - maybe one of those 1.2V reference chips?

-Tom R. N1OOQ randolph@est.enet.dec.com

4803. Amateur radio on World Wide Web?

>efficient and use less power, as well.

I don't disagree with your main points, Alan, but I'd note that typical AM transmitters use Class C RF stages too. It's just that big plate modulator that makes them heavy and bulky. As you note, there are ways around that. FM rigs by constrast are simple and compact, basically a CW rig with a low level audio stage FMing the carrier oscillator.

The key reasons aircraft aren't going to change to FM are the capture effect during receive, that can mask emergency calls, the cost of converting all the FBOs and aircraft nearly simultaneously, due to the nature of aviation, and spectrum availability, NBFM needs a 20 kHz channel while AM will fit in 6 kHz.

4805. "Packet Radio" What on Earth???

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-28 11:51:31 UTC
From: serwpm@lube.latrobe.edu.au
Message-ID: <1994Sep28.065131.1@lube.latrobe.edu.au>
Source record: 259525

As it appears REC.RADIO.AMATEUR.PACKET is empty I would like to know of the set up requirement from someone to get started in the PACKET RADIO side of the Amateur Spectrum. At present I have a Limited callsign, a Yaesu FT290R all mode tranceiver, a NETCOMM 1234SA (Oooh, so slow!) Modem, and an ex University VT100 Terminal (Carterfone TP-100E).

I will probably ring the WIA and/or Spectrum Management Agency today for info but if anyone could help (local Amateurs mostly I guess) I would be most gratefull.

Regards

Bill Maher

They say patience is a virtue. Just wait until he starts sending QSLs
to DX stations - THEN he will know the meaning of a "long wait" !!

Greg, what you need is an old cable-TV box. Many of them come with video
and audio output jacks, and can easily be hacked to do what you
need. Check a few flea markets and you probably won't pay more than $10.

Greg
Bassett (bassett@merlot.syntex.com) wrote:

Also, in Europe we use different bandplans on quite a few bands to the ones you use in the States. Here our 2m band is 144-146, 70cms is 430-440, we have no 220MHz allocation, etc. etc.

There may be a difference with repeater shifts, too. UK repeaters (I don't know about other European countries' repeaters) transmit 600kHz higher than their receive frequencies on 2m, and transmit 1.3MHz LOWER than their receive frequencies on 70cms.

73, Scott

P.S. Although we do use subtones on most of our repeaters, I believe that you can get by with an older rig (or one which simply doesn't have the necessary hardware) using the usual 1750Hz toneburst to bring the repeaters up. This certainly used to be the case, but it's been a while since I used a repeater.

4809. Coaxial Antenna Formula?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-28 12:18:23 UTC
From: tja@netcom.com
Message-ID: <tjaCwuA6n.CG3@netcom.com>
Source record: 259387

Hi,
A few years ago I read an article on coaxial vertical antennas.
It was pretty good in-fact. It gave the formulas for the segments and a
few diagrams for making one out of RG-8 and placing it inside of a piece
of PVC with caps on both ends.

I mad a few of them too, but now "I CAN'T FIND THE ARTICLE"!
It may have been in QST, may have been 73 or CQ... I dunno?

Can anyone help, Please E-Mail me below.

Thanks on advance...

Tom

4810. PRO-23 Mod

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-28 12:24:00 UTC
From: COLERK%snypotvx.BITNET@UBVM.CC.BUFFALO.EDU
Message-ID: <2A7F36788020266E@snypotvx.bitnet>
Source record: 259451

The following information was picked up off of one of the local Packet BBS. This is the ONLY information I have seen concerning the PRO-23 scanner from Radio Shack. I don't have the PRO-23 so don't know if this works or not but the individual who posted the message claims success with no problems! Usual disclaimers apply!

Hold down 2, 9, and LOCKOUT while turning on the scanner. DOING THIS WILL WIPE OUT ALL OF YOUR MEMORY LOCATIONS but will give you access to the following frequencies:

Channel-Frequency

1-138.150
2-162.400
3-173.225
4-406.875
5-453.250
6-511.9125
7-108.500
8-118.800
9-127.1750
10-135.500
11-157.800
12-482.3625
13-806.000

14-857.200
15-888.960
16-911.500
17-954.9125

The last 3 or 4 are out of the normal coverage area for the PRO-23 and will allow you to scan up and down in the full cellular range. Hope this helps.

well, i actually think something like this is not true either. although i would think the builder would like to get all the utilities to get in early to avoid having to trench up the place later & to speed future installations.

odds on favorite is that most people don't care - most don't have a need for an aluminum christmas tree up 80 feet or so and most wouldn't care if their neighbors had one as long as it was installed properly and maintained.

but there are a few people who DON'T want antennas and are quite vocal about it almost every time they get a chance to express themselves. and there are those who don't maintain an outdoor antenna system (ham or not...look at the number of outdoor antennas that were put up 20 years ago and forgotten about).

there was also the CB Boom that contributed to the above as well.

so what have we got? we have general rules produced from a few specific situations and those rules are in the "standard form contract" the developer uses that he gets from his law firm that in turn probably bought it from another firm that specialized in making up contract kits. similar ones available for starting up businesses, non-profit organizations, etc.

and the standard contract is probably based on a series of revisions over time as laws were passed/repealed etc.

so..the builder wants to make sales and he doesn't want to have some schmuck move in first and trash the place...some people think antenna structures, TVRO dishes (Big Ugly Dishes or BUDs), and such are so repulsive that they'll not have anything to do with them...so the builders get the standard forms updated and that noise goes away and they make sales...the forms get passed around and before long everyone's got a clause saying "no <insert favorite thing here>".

Cross-posted to: rec.radio.amateur.misc,rec.radio.info

[[EXAMNT9.28 : 2098 in EXAMNT9.28]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC recently has been taking
upwards of 14 weeks to process licenses (although as recently
as this week, some licenses have come through in six to eight weeks.
The FCC considers their processing time to be 90 days--from the date
they receive the application. The FCC usually receives the application
one to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will effective 6/8/94 receive a new license from
the FCC that reads "TECH PLUS." Such upgrades before that date
would not receive a new license but would need to retain the
existing Technician license plus the CSCE conveying the Morse
code test credit as the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact

the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315. Test fee for 1994 is $5.00.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999. Test fee for 1994 is $5.00.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

[[EXAMNT9.28W : 2100 in EXAMNT9.28W]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC recently has been taking
upwards of 14 weeks to process licenses (although as recently
as this week, some licenses have come through in six to eight weeks.
The FCC considers their processing time to be 90 days--from the date
they receive the application. The FCC usually receives the application
one to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will effective 6/8/94 receive a new license from
the FCC that reads "TECH PLUS." Such upgrades before that date
would not receive a new license but would need to retain the
existing Technician license plus the CSCE conveying the Morse
code test credit as the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact

the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315. Test fee for 1994 is $5.00.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;

I'm going to visit NYC and Boston at mid-October. I have been in NYC before, but found only "Barry's Electronics" at 512 Broadway. Is it the only one there? If so, i don't need to visit there this time...

I haven't been in Boston before this, so it would be nice to know, if there's toys for boys available there. Or is there some kind of "Electronics Street", as in some big cities?

Nice, Cliff. You use two formulas (both correct) to correct a formula
that is *also* correct.

> in the Southern NJ/NY/Eastern PA area?

Hey Joe...
There are 2 coming up in EPA. They are both usually big and worth attending.

On Oct 2, there is the Packrats hamfest at the Bucks County Drive In Theater on RT 611, 4 mi north of PA tpk exit 27. There is also a VHF conference on Sat, Oct 1 at the Days Inn, in Horsham, I believe.

Also the RF Hill ARC Hamfest on Oct 23. It's at the National Guard Armory in Sellersville, PA. Take the Rt 152 (Telford) exit from rt 309 and follow Rt 152 South.

See Ya,
Joe - AA3GN

Has anyone had any experience with the company CABLE X-PERTS ?

They usually advertise in all the publications.

Thanks in advance, Pat n1ocj

4818. 2-meter communication range (long)

Newsgroup: rec.radio.amateur.misc

How Far Can I Talk on 2 Meters?

by

Paul H. Bock, Jr. K4MSG

Recently, there has appeared on this forum some discussion regarding the "working range" of the VHF/UHF bands. This prompted me to develop a set of tables for the 2-meter band which demonstrate how different types of station setups can be expected to perform.

The ranges given here are *estimates* based on *smooth earth*, and in the interest of not misleading anyone I have tried to play the game conservatively. The actual distances were taken from a "path loss versus distance" graph which was first discussed by D.W. Bray, K2LMG, in 1961 and re-published by Ed Tilton, W1HDQ, in all three editions of "The Radio Amateur's V.H.F. Manual." If you don't have a copy of the old V.H.F. Manual and want to understand path loss at VHF/UHF a little better, I highly recommend looking for one at a hamfest.

Even with conservative estimates of performance, however, caution should be the watchword. Some locations just "seem to work better" for VHF than others, so remember that *your* mileage may vary. Variances aside, the tables should help newcomers understand something about the characteristics of VHF path loss and develop an appreciation of the necessity for carefully evaluating each planned improvement *before* shelling out a lot of dough.

There are four tables below: two for FM, and two for SSB. The tables are based on two *identical* stations, i.e., the distances given presuppose that equipment performance at both ends of the path is in all respects identical. The first table for each mode lists communications ranges for identically-equipped stations for 99% reliability, while the second lists ranges for 50%. To understand why the numbers look the way they do you'd have to actually see the path curves themselves, because path loss increases steeply out to 50 miles (at 50% reliability) or 100 miles (at 99% reliability), then flattens noticeably out to about 250 miles, then steepens again (but not as much as at the shorter distances). This means that below 100 miles (or 50 miles at 50% reliability) it takes quite a few dB of improvement to gain greater distance, but once over the "hump" in either curve small improvements can mean large increases in effective working range.

At the extremes of the flat portions where the curves steepen again (about 210 dBw path loss, representing ranges of 285 and 315 miles, respectively, for 99% & 50% reliability) the two curves run nearly parallel with about 30 to 40 miles difference between the ranges for any given path loss, and a range increase of about 5 miles/dB out to beyond 500 miles.

Here's an example of the significance of the flat portions after the "hump:" For 99% reliability, there is approximately a 21 dB path loss difference between 50 and 100 miles, but only a 10 dB difference between 100 miles and 250 miles. Assuming you were at the 100-mile "hump" in the path loss curve (which is actually a path loss of about 195 dBw), by increasing transmitter power, reducing receiver noise figure, replacing the antenna with one having higher gain, raising the antenna higher, or some combination you could make a significant improvement in your working range.

A word about the "50%" and "99%" nature of the tables: "99%" means that any time you turn on your rig you should expect to have the working range shown, under the stated conditions. "50%" means that about *half the time* you may work out this far, but half of the time you *won't*, either; and it *doesn't* mean 50% of each hour, or day, or week, it means 50% of the time over a long period (months, certainly; probably over a year is more like it). Also, the tables do *not* consider any of the more esoteric long-distance modes such as sporadic E or F2 layer skip, aurora, meteor scatter, or extreme tropo ducting caused by inversions or unusual air-mass boundary conditions, any of which can give working ranges of many hundreds or even thousands of miles. The tables only apply to the routine tropospheric propagation we all know and love. ;-)

The following assumptions were made in calculating the data contained in the tables:

1. Receiver noise figure was assumed to be 5 dB without a preamp, and 2 dB with a preamp (preamp located at the rig, not at the antenna; for example, an "integral" preamp common in commercial amplifier "bricks").

2. Receiver bandwidth was assumed to be 2.5 kHz for SSB and 12 kHz for FM.

3. Transmission line loss was assumed to be 1.5 dB, and was added to the receiver noise figures listed above and subtracted from transmitter output power.

4. Antenna height gain for 30-foot antenna height is 0 dB, and for 60-foot height is 4 dB. The tables assume antennas are at the same height on both ends of the path.

5. Required SNR was assumed to be 3 dB. This may seem low for FM, but in fact a signal 3 dB above the "capture" level can be easily copied. What may happen, however, is that if the signal strength fluctuates near the capture point the signal may drop in and out

continuously, making copy impossible. A SSB signal, on the other hand, will fade in and out more gracefully with at least partial copy even down close to the noise floor, making an exchange of grid squares, signal report, and callsign possible even under poor conditions. This is one reason why SSB is preferred over FM for weak signal voice work (another being the better sensitivity on SSB due to the narrower bandwidth and subsequently lower receiver noise floor).

6. Antenna gain was assumed to be the same at both ends of the path.

7. Ground reflection gain was assumed to be 3 dB (combined).

8. A factor of 7 dB was subtracted for fading loss in all cases.

I should note that the antenna gains shown were chosen to represent typical antenna configurations used on these modes: a 5/8 ground plane, omni collinear, and small & medium yagis for FM; two-element quad and small, medium & medium-large yagis for SSB.

Finally, as a "sanity check" on the numbers shown, I can vouch for the ranges shown for SSB stations with 25 watts output and a 12 dB yagi at 30 feet, and with 80 watts plus preamp and the same antenna. In fact, with 25 watts I've had QSOs out to 290 miles with better-equipped stations without any super-unusual ducting, just some good tropo path enhancement (but it's *definitely* in the "50% or less reliability" category).

So, without further ado, here are the estimated working ranges of identically-equipped FM and SSB stations for 99% and 50% reliability at 144 MHz.

TABLE 1. FM Range in miles @ 99% Reliability

Antenna gain & height
3 dB 6 dB 9 dB 12 dB
Configuration 30' 60' 30' 60' 30' 60' 30' 60'

5W, no preamp 28 42 38 52 48 63 59 75

25W, no preamp 40 53 50 65 60 77 72 96

80W w/preamp 53 68 65 82 77 110 96 230*

160W w/preamp 59 75 70 93 87 175 130 260

* See what happens when you're located right at or over the "hump" (i.e., at 96 miles)? The 4 dB improvement from raising the antenna MORE THAN DOUBLED THE WORKING RANGE!

TABLE 2. FM Range in miles @ 50% Reliability

Antenna gain & height
3 dB 6 dB 9 dB 12 dB

Configuration 30' 60' 30' 60' 30' 60' 30' 60'

5W, no preamp 37 50 46 73 63 123 110 195

25W, no preamp 48 80 67 135 115 205 180 255

80W w/preamp 80 156 135 230 205 263 255 283

160W w/preamp 110 195 168 253 240 273 265 293

TABLE 3. SSB Range in miles @ 99% Reliability

Antenna gain & height
6 dB 9 dB 12 dB 15 dB
Configuration 30' 60' 30' 60' 30' 60' 30' 60'

25W, no preamp 63 80 75 100 93 215 175 272

80W w/preamp 80 130 100 245 215 280 272 310

160W w/preamp 90 200 160 268 252 295 285 325

TABLE 3. SSB Range in miles @ 50% Reliability

Antenna gain & height
6 dB 9 dB 12 dB 15 dB
Configuration 30' 60' 30' 60' 30' 60' 30' 60'

25W, no preamp 123 215 195 260 253 280 273 300

80W w/preamp 215 265 260 285 280 310 300 345

160W w/preamp 250 275 270 297 290 325 315 365

If you have questions about the tables above, please feel free
to drop me an e-mail. If there are inaccuracies or inconsistencies
in the information the fault is mine, and if you find any please
e-mail me and I'll post corrections and/or additional info as
necessary, with due credit to the finder(s).

Finally, if you'd like a photocopy of the 2-meter path loss
chart send me a *legal-size* SASE and I'll shoot one your way.

>Granted your price was low, but why would you want to use one of these when
>you can get a digital unit with better accuracy, autoranging, autopolarity,
>more resolution, in a small package, not line operated, etc., etc. for not
>that much more cost?

I use one for RF work where you have to make adjustments that require you to watch for a peak in the voltage....It's a lot easier to watch abig needle sweep to a peak voltage than watching a bunch of numbers rolling around.

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC recently has been taking
upwards of 14 weeks to process licenses (although as recently
as this week, some licenses have come through in six to eight weeks.
The FCC considers their processing time to be 90 days--from the date
they receive the application. The FCC usually receives the application
one to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will effective 6/8/94 receive a new license from
the FCC that reads "TECH PLUS." Such upgrades before that date
would not receive a new license but would need to retain the
existing Technician license plus the CSCE conveying the Morse
code test credit as the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact

the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315. Test fee for 1994 is $5.00.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999. Test fee for 1994 is $5.00.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1994 test fee is $5.75.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1994 test fee is $5.75.

4821. UK repeaters frequencies needed ...

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-28 15:16:01 UTC
From: jcmonier@muguet.saclay.cea.fr
Message-ID: <36c1bh$e3r@anemone.saclay.cea.fr>
Source record: 259453

73 to everyone,

I'm searching repeaters freq. in VHF and UHF for UK and especially
for KENT and SUSSEX.

If someone can post that ...

TNX

Note : If you have the same thing for Italy ...

4823. Address line problem

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-28 15:20:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2E890B77@smtp>
Source record: 259432

Dear Brian,
although I appreciate your message about 'my software needs fixing if the addresses given are bad' here is an exampple of a text from within 'ham-equip digest' (same for 'info-hams') which I cant answer (see the From: line) because of the address given in it. I dont have the time and am not interested in typing the two lines of address. Maybe you shoulkd get your software fixed and present concise addresses in the message headers?

Peter, KC1QF

In article <lestrade.780506240@Ra.MsState.Edu> lestrade@Ra.MsState.Edu (John Patrick Lestrade) asks:
Why does Radio Shac care if I export HT202? ##

In article <barry.490.000AF159@indirect.com>
barry@indirect.com "Barry Rose" writes:

> I am not sure it is illegal but I have heard that the repeaters in
> Europe use a different scheme than we do here. Here we use one pl tone to

[snip]

S'right. European repeater *MAY* not support CTCSS (PL[tm]). But many do ...

> have to have their type of tone encoder installed or you will not have
> access to their repeaters. You also need a operator license for any other

[snip]

BZZZZZZZZTTTTT!!!!! Nice try - wrong answer :-) The 'alternative' access mechanism in Europe is a short (200-300mS) burst on 1750Hz tone (you may hear it referred to as 'tone burst' for that reason). The tone is *usually* required only to start the machine up from 'cold' state; after that, waiting for the courtesey beep between transmissions is usually enough to reset the talkthrough (timeout) timer. But not always .... it's sometimes necessary to send the 1750Hz tone every time to do that; it's not a challenge - most folks can manage a whistle to do the job for them. I seem to remember an old ARRL publication ('FM and Repeaters', perhaps?) referring to / describing this scheme and naming it 'whistle on'.

Come to think of it, since I got a new car and installed a TM742 with hands-free microphone, I don't have a tone burst anymore - seems that Kenwood built it into the fist mic :-(

[snip]

> worry about his question. Maybe he was just curious and wanted to go with

Maybe the guy really did know something and was genuinely trying to help. A much bigger barrier for 144MHz-ish radios intended for the US market is that they tend to want to use 10KHz/20KHz steps rather than the 12.5KHz/25KHz steps that are the norm for the rest of the planet :-)

Of course, I don't know the RS rig being discussed, but I've a sneaking feeling about those tuning steps .....

Source record: 259391

I read of a Toyota Celica who's sunroof opened because of surrounding RF. The sunroof control is run by a micro-controller system with push buttons in the headliner. The sunroof is programmed to open with a single touch of the switch, and to sense "fingers in the way" when it closes. Nice ideas but the trouble was that the RF was coming from some heavy-duty motors in the drive-thru carwash. Yes, the car's interior was soaked.

I would expect lots of electronics would act "wildly" or be ruined if they're not RF shielded. If Toyota, who is very good with reliabilty and customer reputation, actually said "Don't do it" I would believe them. (especially when QST told them what their inquiry was for)

Tucker has some of the highest prices I have ever seen. When I called and asked if they meet the competitions prices they said NEVER. So I NEVER buy from them.

The best prices I have seen and have spent thousands with them if R&L Electronics. They have stores in Hamilton (Cincinnati, OH) and Indianapolis. Ads are in QST.

4828. TNC-1 / HD4040 Packet

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-28 18:03:09 UTC
From: wejones@cbda9.apgea.army.mil
Message-ID: <9409281403.aa22723@cbdcom.apgea.army.mil>
Source record: 259393

Hi
Don't laugh, but I have an old Heathkit HD4040 TNC that I use occasionally at work with an HT. While I have the manual for it, I don't have a schematic. Is it still possible to get schematics for old Heathkit stuff, and/or alternatively, does anyone have a schematic from which a copy could be made? This TNC is a TNC-1 clone, and has very old software. Is there an FTP site anywhere that might have more recent TNC-1 ROM software, and/or assembly language source for any TNC-1 software? I would like to make some minor changes to the code, to correct a few annoying features. Also, I have a 6809 cross assembler, but I have been unable to find a 6809 dissassembler, except for one that runs on a COCO, and it is buried deep in an old parts box somewhere. I'd like to find a a 6809 dissassembler that would run on a PC.
Finally, this TNC is supposed to function as/with an eprom programmer, but the manual doesn't tell you how. Has anyone used this feature?
Thanks in advance & 73

Sure.. I have a Heath something that I picked up at hamfest about 5
years ago for $10..

The probe for mine has a 1 meg resistor in it to provide a total input
impedance of 11 meg -- fairly common as I remember. But, some had to
have a different probe for AC and ohms or, a probe with a switch that
would short out the 1 meg resistor when measuring AC or ohms..

As for calibration, the instructions with the old Heath units told you
to use a fresh 1.5 volt battery, set the VTVM to the 1.5 volt scale
and adjust until the meter rested on a little red dot that was just
above the end of the scale.. AC calibration was done by measuring the
AC supply and assuming it was 117 volts.. There was also a balance
adjustment that had to be tweaked as you switched back and forth from
-DC to +DC functions.. Tweak until the meter didn't move upscale as
you switched between the two functions..

I know where there are some Hewlett Packard 410B VTVM's.. One of those
is probably going to retire my Heathkit to the backup shelf..

Welcome to the wonderful world of firebottles!!

4830. Power Connector for Kenwood Mobile

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-28 18:16:08 UTC
From: milway@tecnet1.jcte.jcs.mil
Message-ID: <199409281835.LAA25782@ucsd.edu>
Source record: 259392

I want to wire the power connection for my Kenwood into all of my vehicles, allowing easy removal and switching between them. I have looked for the DC Power connector at several stores and at connector vendors at recent Hamfests. I have never seen the correct connector. It's a two pole with one blade at a 90 degree angle to the other. Anyone know where I could get 3 or 4 of these? If I can't find the origional connector, I'll just install a connector pair that is readly available, but I hate to cut the old connectors off if I dont have to. I might buy another Kenwood and want to use it interchangably with the one I now have.

A second connector question. I'v also been looking for a connector to allow use of a the small Standard Marine HT (I think it may be a 230, but not sure) with an external antenna. The rubber duck has a strange connector that I have not seen anywhere. I even carried the antenna to the York Hamfest and asked several of the guys with bins of connectors if they could help. After studying the connector, they said that they could not match it. Previous Marine HT's had BNC's and were easy to use with the big marine antenna that I use for the 25 watter. Sure make a difference in commo range on the water, and I'd like to be able to use the HT with the more effecient antenna.

>before long everyone's got a clause saying "no <insert favorite thing here>".

Bill, you've hit several nails on the head. First, the CB boom *did*
have a very negative impact on peoples' views of outdoor antennas. Most
areas of the country didn't have restrictive covenants in the '60s when
the boom begain; a lot of very ugly CB antenna popped up in a lot of
housing developments, and this led to the idea in "planned" communities
of the "no outside antenna" rule. The concept has spread to most new
developments, even those adjacent to older developments where no such
restrictions apply; the advent of satellite dishes has only exacerbated
the problem.

Of course, CB has died down considerably, and hams are such a small
percentage of the population that for every ham who says "I won't buy
a house here because of your covenants" there are probably several hundred
perspective buyers who'll say, "Oh, you have cable? Great! Where do I
sign?"

This may change as direct satellite brodcast grows in popularity,
because then you will be talking about a much larger segment of the
general population having an interest in an outside antenna, but even
then it will have to be a situation where the antennas are fairly
small; I'll wager that *very few* "average citizens" care for *big*
antennas in their yard, but something no bigger than 24" in diameter

and roof-mounted wouldn't be viewed as that much of an eyesore (at least, not as long as it's hooked up to *their* TV!).

One other consideration is safety. In some jurisdictions, the possibility of your ham tower falling on someone else's property can affect the way that municipalities view such structures. And, of course, if you make an enemy out of your neighbors they'll have a lawyers telephone number handy, ready to sue you at the first instance of part of your antenna striking their house/tree/car/yard, etc.

The bottom line, of course, is that if you accpt the covenants you have to live with them; if you find them unacceptable, you'll either have to (a) live somewhere else, (b) try to get them changed through reasonable (and time-consuming) lobbying, etc., or (c) be a "stealthy ham" (and probably never have that world-class 50/144/220/432/1296 contest station you've always dreamed about).

Which is why I live in the country, very far from town, and spend between 2.5 to 3 hours each day with my round-trip commute to work. Sometimes life just isn't fair.....

There are a bunch of Web pages devoted to ham radio.

Two you may wish to check out are:

http://www.acs.oakland.edu/barc.html

and

http://www.acs.oakland.edu/barc/ham-more/ham-more.html

Hope this helps!

|> --
|>

Larry,

I'm going to give you a grade of 66% because two out of the three sentences
above are true. It's that last one that got you this grade.

As has been said repeatedly on this group recently, PRB-1 first requires that
communities accomidate amateur operations, but explicitly excuses itself
from private contracts, i.e. CC&Rs. So, if a development has CC&R's that
limit or prohibit towers, antennas, or whatever, PRB-1 supplies NO protection.
Secondly, though there have been some court battles that we've won, there
are also a number that we've lost that have gone ALONG way in diluting the
force of PRB-1 to the point where a community can create quite legal effective
barriers to you putting up a tower. Many courts have decided that accomidate
really means just consider the amateurs' application. If the community has
a method to consider a tower installation, and they deny it, this will stand
up in some areas of the country. This also doesn't address the several
communities that have created price barriers. There are some counties in
CA that require a $1500 non-refundable fee just to put in an application that
may be denied! Life isn't terribly rosey for us on this front right now.

|> clifto@indep1.chi.il.us --The First Law of Reality

Oh, I don't know about that! I've had some success along these lines with my local company. The trick seems to be WHO you talk to.

Quick story:

Cable company had just installed new hardware in my area(fiber no less!) and I had an extremely strong carrier on 145.25....much worse than it was with the old installation. I did a little t hunting, and it seemed that there were multiple strong radiators on the block.

First I called the service folks and asked them to come and clean up their act. I got what you are talking about when dealing with them. "Oh no sir, it can't be us." This is standard service-droid speak. So, a few days latter I called and asked for the chief engineer. Didn't get him, but he did call me back! I explained my problem to him(I didn't even have to mention I was on a first name basis with the folks at the local FCC FOB ;-) He agreed that there was likely a problem with the new installation, and that he'd have someone out within the next 2-3 days to look into it. Well, I checked 145.25 about a week latter, and sure enough, there was a considerable attenuation of the signal...rougly down to the original leakage level.

Moral of the story...get hold of the chief technical guru of the company and explain that you think there is a problem...he'll be familiar with the FCC rules requiring his compliance, and should be alot more ammenable to helping investigate the problem. The fact is that if they are leaking OR you are managing to get into their system, they DO indeed have a problem that will probably cause him greater grief if he doesn't get it attended too! He

knows that...the service droids don't have a clue...don't even bother with them.

>The formula is sqrt(2) * sqrt(h). This is 50% greater.

Uh, Cliff, wanna try that again? (Clues below. :-)

True, it is 50% greater than something, I suppose, but not of the
correct answer. It is 0% greater than the correct answer. Let's
look into this further, using real numbers for "h".

Let "h" = 1,000,000 feet

Formula 1)

D = sqrt(2*h)
= sqrt(2000000)
= 1414.213...

Formula 2)

D = sqrt(2) * sqrt(h)
= 1.414213... * 1000
= 1414.213...

So that a million-foot-high antenna will talk about 1400 miles.

Can I get one of them from Texas Towers?

4839. 900 Mhz phone questions ...

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-28 20:50:21 UTC
From: aalto@u.washington.edu
Message-ID: <36ckud$qpr@nntp1.u.washington.edu>
Source record: 259473

I just got a new AT&T digital cordless 900Mhz phone, and although it is indeed an improvement over my old cordless, I need more range. We have a fair amount of property, and it stretches for almost a mile away from the house (yes we live out in the sticks); I would like to be able to receive calls anywhere on the property. I either need more power output or a good 900Mhz antenna -- interfering with the neighbor's phone is not a problem, since the population density is so low. I seem to have three options.

1) Get a phone with higher output. The phone I have is at the FCC Max, but could I get a higher output phone from some source I don't know about in US or Canada (are the Canadian output limits higher than the US?? BC is just up the road from me...)

2) Get a good 900Mhz antenna for the base unit, and perhaps some sort of telescoping antenna for the receiver ?? I have not seen any such antennas sold. Are they available ??

3) Buy or make a 900Mhz amplifier for the base unit. Are these or the plans for them available ??

Are there any other options I should consider? Ideally, I'd like about two miles of range on a phone that costs less than $500. Cellular is not an option.

Thanks for your help,

Rolf Aalto

ps. I don't regularly read this group, so please e-mail me any response. If there is interest, I'll post a summary.

4841. Radio Shack Violation

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-28 21:19:00 UTC
From: brian.parker@pcappbbs.com
Message-ID: <9409300400112135@pcappbbs.com>
Source record: 259373

The other day I had a need for a Chimney mount so I went over to my local Radio Shack Store. When I made my selection and paying for the item I noticed there was the Tandy so called version of the 2 meter HT on the counter. I noticed the HT was on and it was turned to a local repeater. I picked up the unit the keyed the unit, (my apologies to the local repeater owner for Kerr-chunking his repeater). I was SHOCKED when I heard the courtesy tone from the repeater.

I started to ask the salesman about the unit he told me that he would sell me the unit, he would sell me anything but I had to get a license to operate it. This sounded strange to me, I had operated the unit when I was in the store and he didn't know if I had a license or not.

The following morning I contacted the ARRL and explained the situation. They informed me they would be contacting Tandy.

Just to be curious I went back to the same store. There was a different salesman and I was still able to key the unit. I don't know if this is a wide spread problem or only in this store but if I was the repeater owner I wouldn't want some puttz like me kerr-chunking my repeater.

I just want to urge the rest of you, if you happen to be in your local Radio Shack look to see where the 2 meter HT is being displayed, if you can reach it, if you can operate it, and if you can kerr-chunk a local repeater. If all of these conditions are true contact the ARRL!

BTW - The ARRL are the ones that supply Tandy with their Amateur Radio Books.

: I dunno about the voltage scales - maybe one of those 1.2V reference chips?

Sure. Anybody with discriminating eyes can see that the VTVMs give very noticeably smoother readings, unlike the harsh, crystalline readings of the solid-state meters. I don't care what tests you run, the readings just look better. I understand that the Japanese are particularly fond of VTVMs, so there must be something to it.

It's also been found that you get better readings if the probe cable's impedance matches the input impedance of the VTVM. (Boy, is the center conductor small!) Gold plated connectors help, too. Some authorities have reported that a green magic marker applied to the meter rim noticeably enhances readings, but I haven't tried this myself.

Better get yours before they're all snatched up by the metrophiles!

S@> Steve,
S@> N3FWE

I have owned a th22at for about 2 months now and am very happy with it.
However this is my 1st ht so take this with a grain of salt.I also posted on
this group 3 months ago with the same question and recieved no negative
comments regarding this radio.I have found it easy to use/program.The rubber
duck has been replaced with a 5/8 telescoping antenna,not uncommonn for any
ht for incresed performance.Id buy one again! 73 KE6LZS

uhhh, not to seem inflamatory or anything but, wireless = without wires,
and radio = is using a certain portions of the EM spectrum. Hence people
do not normally consider Infra-red communacation or any such, 'radio'.

The Buffalo callsign server is updated periodically. It has simply been a while since an update (January). Since then, there has been new info available on CD ROM, so it is probably just a matter of time until the callsign server is brought up to date. I myself have several QSLs which I am holding until there is an update.

Does anyone know when an update is likely to occur? Perhaps after the release of the October update from Buckmaster?

4849. Wanted info on Hallicrafters FM-7 transciever

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-29 00:46:02 UTC
From: mc@shore.net
Message-ID: <36d2oa$qtq@shore.shore.net>
Source record: 259379
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc

I recently picked up a military looking radio at a flea market. Its
small in size and themilitary-looking label reads:
"TRANSCIEVER
FM7-HW
SER NO.
the Hallicrafters Co.
a subsidiary of Northrop Corporation
Rolling Meadows U.S.A.

It looks fairly well built but the label doesn't have a contract or FSN so
it may only look military spec'd.

Anybody know anything about this - manual perhaps?

73,

Michael Crestohl KH6KD/W1

This year marks the 25th running of the New York City Marathon,
and for a good many of those years Steve Mendelsohn (WA2DHF) has been
the Commnications Coordinator, finding, encouraging, training, and
inspiring the hundreds of ham radio operators needed to help ensure the
safety of the tens of thousands who run in this mammoth event. Steve
joins the Spectrum crew this Saturday, October 1, giving us a look at what's
involved in making it all come together. He'll talk about this year's
effort, and will likely have a tale or two from Marthons past.

Join Steve Mendelsohn Sunday at 0400 UTC (Saturday at 10 PM EDT) on
SPECTRUM, "The Communications Magazine You Read With Your Ears"

Spectrum can be heard on:

Galaxy 3, x17, 5.8 wide audio
WWCR, 5810 kHz, Nashville, TN (Worldwide)
WIFI, 1460 AM, Florence, NJ (Philadelphia Area)
KHNC, 1560 AM, Johnstown, CO (Denver Area)
TCI Cable, Tulsa, OK

BR\>I am not sure it is illegal but I have heard that the repeaters in Europe u
\>a different scheme than we do here. Here we use one pl tone to access a
\>repeater, (sub-audible tone that you must have installed in your radio to
\>brind up the repeater). This means that a rig made for the US will have to
\>have their type of tone encoder installed or you will not have access to th
\>repeaters.

Well, repeaters in europe used to work with a system called "tone burst"
wich send a brief tone at 1850 hz with each transmission that is
necesary to key the transmitter of the repeater. I don't know if they
still use it however

There is also a second reason that I can see
The 2 meter band in europe is from 144.000 to 145.999 mhz and this
rig will have an out of band TX over there and could make this rig
completely illegal in some countries

Hi all,
I hope I'm posting this to the right group. I need plans or help constructing a 9V (supplying 9V at 2 or 3 amps) power supply that will be used in Russia (220V 50Hz). I have the '92 Handbook and it has several project that are all well and good, but not being an engineer I don't know exactly what to substitute to get the output I need from the foreign source. One more problem is I need to have this built buy October 5 (it will be leaving with my brother then).

Orrr.... should he just wait and buy one when he gets to Russia?
Thanks for any help

Any individual who uses that type of language whether it be on the air
or on a BBS doesnt deserve a license, I hope they lost the application
Just the kind of moronic juvenile behavior you will find on the infamous
147.435 in Los Angeles. This is obviously an individual who never
taken the time to read anything except the answers to the test, hasnt
got the foggiest notion what Amateur Radio is all about, should find
a copy of the Amateur's Code and read it over several times.
But with that type of mentallity would need someone to read it to him.
Get a Life, learn about life. Dont be rude all your life.

When I tried to find out about this (after scouring the manual), I
finally resorted to using the out of band receive feature to eliminate the
feedback. IE, the repeater I wanted was on 44x.xxx, and I wanted to go in on a
2m freq, say 146.xxx. I programmed the radio to receive on the 440 rptr output
, but transmitted on the 2m freq. Only problem here, is that you can't hear
the frequency you are trransmitting on. Hope this helps.

Greater than 2 MeV Electron Fluence for 28 SEP is: 2.4E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. No significant activity
noted as disk and limb remain stable.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at mostly quiet to active
levels for the past 24 hours with a brief period of minor
storm activity reported at high latitude stations from
28/09-12Z. The greater than 2 MeV energetic electron flux

was generally moderate with a brief period of high activity
from 28/21-23Z.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly quiet to unsettled for the next
three days.

Event probabilities 29 sep-01 oct

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 29 sep-01 oct

A. Middle Latitudes
Active 20/10/10
Minor Storm 05/05/01
Major-Severe Storm 01/01/01

B. High Latitudes
Active 20/15/10
Minor Storm 15/10/05
Major-Severe Storm 05/01/01

HF propagation conditions continued below-normal over the
high and polar latitude paths, although conditions were
improving by the end of the UTC day. Propagation should
continue to improve over all regions and return to near-normal
by 30 September.

and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

SPECIAL INSERT: YOHKOH FULL-DISK X-RAY IMAGE

4862. Re: PRB-1 IGNORED!!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-29 05:35:29 UTC
From: af255@cleveland.Freenet.Edu
Message-ID: <36djn1$lp1@usenet.INS.CWRU.Edu>
Source record: 259422

I've lost track of the battle for our antennas since I won mine on
September 21, 1990. I didn't expect it to stop there or get better
just because of a victory in the 6th circuit. The ROCKY RIVER, OH
case is cited 748 f.supp.1241 . The second of three court orders
wasn't published but they were posted here in Oct. and Nov. of '90.

If you talk to a league volunteer counsel, they should already have a copy.
They should talk to you for free initally, but once you get to court
the meter is running, perhaps discounted, but still running. I've
read of a few cases which were settled out of court with expenses
partially recovered, not recovered or a court order granting some
recovery. There isn't much guarantee here. My recovery of $14,091.05
was probably the result of "not receiving a fair hearing" rather than
PRB-1. I'm still out about two grand in the end.

None the less, talk to the league vol. counsel and read the mags for
the results of other cases, especially the peacefull settlements
and favorable legislation. They went ballistic in RR and tried to tighten
up the code even more. The action they took here was denying the tower
because of a neighbors protest. A most efficient way to burn over
$32,000 of your tax dollars (it cost them over $18,000 plus what I
recovered.

Drop me a line to tell me the whole story or where to find it all.

73, Jim wa8zhn

Raymond L. Yoder <at732@cleveland.Freenet.Edu> writes:

> I am planning on purchasing a 2m handheld in the near future.
>I think it's down to three radios I'm looking at. The Icom IC-T21A,
>Icom IC-2GXAT, or the Kenwood TH-22AT. Does anybody have any comments
>or experiances (good and/or bad) that could help me make my decision.
>I have never owned a handheld or a 2m rig, so I'm new at this.

Ray:

I got the IC-2GXAT. I also have the IC-W21AT. Accessories fit both HT's.
There is a keyboard mod to open up RX from 118 to 179. I like Icom. The
T21A has 100 memories vs 2GXAT's 40, and I think it receives 70cm - a tease.
The 2GXAT is a great performer. I got it because I wanted a backup HT.

4866. Communications-Electronics Technical books for sale

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-29 08:34:10 UTC
From: tim@umcc.umcc.umich.edu
Message-ID: <36du62$9sn@umcc.umcc.umich.edu>
Source record: 259397
Cross-posted to: sci.electronics,rec.radio.amateur.misc,misc.books.technical,misc.forsale

In a continual effort to clear up some space, I have the following radio-electronics books for sale:

'A Handbook on Mobile Communications,' William Duff, Don White Consultants, Inc, 1980

'Modern Electronic Communication,' Gary Miller, Prentice-Hall, 1978

'Lightning & Lightning Protection,' William Hart & Edgar Malone, Don White Consultants, Inc., 1979

'Spectrum Management Techniques,' Donald Jansky, Don White Consultants, Inc. 1977

'EMP Environment & System Hardness Design,' Rabindra Ghose, Don White Consultants, Inc. 1984

'Interference Control in Computers & Microprocessor-Based Equipment,' Michel Mardiguian, Don White Consultants, Inc. 1984

'Electromagnetic Shielding -- Materials & Performance,' Donald White, Don White Consulting, Inc. 1980

'Antenna Theory & Design,' Robert Elliot, Prentice Hall, 1981

'Practical RF Design Manual,' Doug DeMaw, Prentice Hall, 1982

'Grounding for the Control of EMI,' Hugh Denny, Don White Consultants, Inc. 1983

'Computer Communications Volume II -- Systems & Applications,' Edited by Wushow Chou, Prentice-Hall, 1985

'Amateur Radio Equipment Fundamentals,' Albert Helfrick, Prentice-Hall, 1982

'EMC Technology -- 1982 Anthology,' Don White Consultants, Inc. 1984

'Transmission Analysis in Communication Systems (Volume 1),' Osamu Shimbo, Computer Science Press Inc., 1988

****

All of the reference texts are in like-new condition. I'll take best offers on any or all of them. Preference of course is to sell all or the majority of them to one person, to simplify shipping matters, but I'm flexible -- the main goal is to free up some shelf space.

Please respond via e-mail.

Anyone need a manual for the Icom IC-900A/E radio system? I have
the manual, but long ago got rid of the radio!

If anyone has a need for the manual. e-mail me quickly, before it
gets dumped with all the other paper to be receycled!

Postage to mail it off should be a little under $1.

Tim

4868. toroid question

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-29 09:27:46 UTC
From: beavis@pentagon.io.com
Message-ID: <beavis.780830246@pentagon.io.com>
Source record: 259403

I hope this is not a completly stupid question:
I have been building a qrp rig and was wondering
about how to wind the toroids. If you need, say,
12 turns, what are the differences between
bunching the windings together tightly or evenly
spacing them out. Ditto for a transformer,
should you space out secondary turns over the
primary ones or keep both wound tightly (and
neatly) with the secondary atop (and centered)
on the primary. I know there are plenty of
variables, but could somebody give me a rough
idea of the major factors involved here?
tnx, beavis (beavis@io.com)

4870. World Wide Web: Shortwave & Radio Catalog Issue #10 Now On-Line

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-29 10:51:40 UTC
From: Peter.E.Costello@att.com
Message-ID: <Cww0u6.HDJ@nntpa.cb.att.com>
Source record: 259420
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.info

ANNOUNCEMENT
Shortwave & Radio Catalog

Shortwave / Radio Hypertext Catalog on the World Wide Web (WWW)

AVAILABLE NOW
ISSUE #10
Now Split into 4 Pages!

A catalog of hypertext links to FTP, GOPHER, and WWW files and services
for the Shortwave Listener and Radio enthusiast is now on-line. This issue
includes links to broadcaster schedules, digital audio files, graphics,
mediumwave, shortwave, FM, Ham Radio, FCC, and other files associated with
radio.

IMPROVED HYPERTEXT FAQS
Ralph Brandi's FAQ material in hypertext form has been upgraded and is NOW
available on this WWW server! In addition, over 100 hypertext links (and still
growing) are listed. These include direct links to Shortwave, AM, and FM
broadcasters, Solar reports and images, Free Radio Berkeley, audio files,
ham radio info and much more. All these available with a click of your mouse
via NCSA's Mosaic (return key for NCSA lynx users).

The URL to put in your hotlist/bookmark file:

http://itre.uncecs.edu/radio/

** WHAT'S NEW **
o - Robert's Satellite WWW page (Satellite Radio)
o - Bradley University Ham Radio (Shortwave)
o - Direct link to BBC World Service (Shortwave)
o - Links to Shortwave Radio ID audio tracks (Shortwave)
o - A new World Radio Network WWW link (Satellite Radio)
o - PRS Corporation SW Radio Simulator (Shortwave)
o - VOA News and Communications World digital audio (Shortwave)
o - KOL-Israel External Service schedule (Shortwave)
o - Misc. Shortwave Schedules (Shortwave)
o - E-mail Addresses of hams on the Internet (Shortwave)
o - Radio Australia Schedules (Shortwave)
o - Boston Amateur Radio Club Field Day WWW Page (Shortwave)
o - Misc. corrections and updates

** MUF/LUF **
Maximum Usable Frequency, E-Cutoff a.k.a. Lowest Usable Frequency Charts

I have a WWW MUF/LUF tool based on "micromuf.bas" on-line! Fill out your location, transmitter location, and sun-spot info (links to solar info for the day, week and month available from the web page.) and an ASCII, WWW, or even a .GIF MUf/LUF propagation chart graphic file will be returned! Try out this interactive World Wide Web form.

Toward the Future

If you have a site or know of a site that maintains up-to-date information on radio topics, send me e-mail.

If your club would like to participate, (provide program schedules, club events, maintain files on individual broadcasters, etc.), send me e-mail.

If you are a radio broadcaster and have internet ftp files, gophers or WWW servers with program schedules, audio-on-demand files, or other information to share, send me e-mail.

I am also looking for UNIX software programs that could create propagation information in graphic form (GIF, JPEG, ???) that would be adapted to use WWW forms to send the graphic to the WWW user. If you know of a tool (read free program), send me e-mail.

My thanks to Jay Novello for providing his public access WWW server and to Ralph Brandi for providing the FAQ html files!

Hi Martin. Well, I can tell you that I sign mine. Also, I have had very good luck receiving cards with sigs on them. Many of my received cards are from contest Qs and I don't think I have ever received a card that was not usable for credit.

I have received credit for cards that were not signed, but they have probably been for *easy* countries. I suspect the rare ones get scrutinized a little closer.

73, Jeff.

For 2m:

Who Where Repeater o/p Input Offset

GB3SR Brighton, West Sussex 145.600 -600
GB3KS Dover, Kent 145.625 ditto
GB3ES Hastings, E. Sussex 145.675 ditto
GB3KN Maidstone, Kent 145.700 ditto
GB3WS Horsham, W. Sussex 145.750 ditto

For 70cms:

GB3CK Ashford, Kent 433.000 +1.6
GB3HO Horsham, Sussex 433.025 ditto
GB3NX Crawley, W. Sussex 433.050 ditto
GB3CC Chichester, W. Sussex 433.075 ditto
GB3NK Wrotham, Kent 433.100 ditto
GB3HY Haywards Heath, Sussex 433.125 ditto
GB3SK Canterbury, Kent 433.150 ditto
GB3RE Chatham, Kent 433.275 ditto
GB3HE Hastings, Sussex 433.350 ditto

23cms:

GB3CP Crawley, W. Sussex 1297.075 -6.0

This list came from my 1993 Call Book. I have a newer one at the shack
which is at another location. Will post updates or corrections after
the weekend. In the meantime, have good luck with these.

I've noticed that several electronics gadget shops in the 42nd Street, Times Square to 8th Avenue area sport 2m HT's in the windows. I hate to think who buys these and for what purpose, but you might check these out for price. By the way Barry's will move or has just moved. They are or will be about a half block uptown, still on Broadway.

Has anyone here had this experience but me...

Walking around downtown New Orleans, you happen upon a store front
with BRIGHT, BIG LETTERS! CAMERAS! STEREOS! SALE! SALE! SALE!

and you happen to walk into the shop for the heck of it and see an
Icom 2SAT for sale, in amongst the CBs and scanners. The hardly-
speaking-English guy behind the counter, when asked, sidles over
to you when you ask about it, and says "400 dollars," and then
QUICKLY walks away...

So I just happen to be in New Orleans, and, WHOOPS, I forgot my radio!
Better buy one, right?

Questions:

1) Does the seller even know it's not just a walkie-talkie?
2) How'd he get it in the first place?
3) Who ends up buying it, esp. @ $400 a pop...?

Disturbing.

It is stated somewhere on the buffalo server that updates only occur when
somebody donates an updated cd-rom. Until somebody buckles up and gives the
maintainer the means to upgrade I don't think it will happen.

Answer to my own question, which I found locally: You must present your license, IN PERSON, at the Mexican Dept. of Transportation, typically at a border crossing (port of entry), and pay $30. You will receive a Mexican call (no longer your own call with XE...appended) which is good for 6 months.

A New Yorker's warning to tourists: Enjoy our city. Don't get ripped
off by the camera/electronics rip-off shops! We use those shops exclusively
to *look* at the HTs before mail-ordering them from a reputable mail order
company. There is no store in NYC that has ham radio equipment at good
prices.

For all of you out there, the die hard CW people that is, there is nothing wrong with Phone, neither is anything wrong with people that have forgotten CW. History has often shown that the more the cynic, the less the gain. If you want people to do CW, encourage them, not put them down. And get rid of comments like the final paragraph below. They only alienate you (and people like you that start CW DX discussions like "...and we did 1000 CW contacts, for those that remember what CW is....) from everyone else.

Date: Wednesday, September 28, 1994 9:28AM

FR/G, GLORIOSO. Rumor from 256 Group is that FR/G tentatively is scheduled for December 1994 and again for July 1995. The operator on FR/G will probably be Jacques, FR5ZU. It is believed he only operates on SSB nets, some RTTY but no CW.

Nets only? NO CW? Geeeee...aren't we just unbelievably surprised.

I am going to Alberqerque, New Mexico Ooct 7 - 9 for the balloon festival, and I am interested in hearing from other hams that are planning on going out there as well. I will have 2 meter and 440 capabilities, and possibily an ATV receiever.

I understand that Bruce, KB5ZRV may be going up in a baloon with ATV, and it would be fun to watch from the ground is possible.

Would appreciated hearing from anyone planning on going, and frequencies, times,. etc.

Thanks.

I still have, and use, a Heathkit V7A constructed from a kit in 1956. Some years ago, I replaced the internal ohmmeter battery (a "C"-cell) with two, series-connected, silicon diodes providing a constant-voltage source of 1.7 volts for the internal ohmmeter supply. Also replaced the pilot light with an LED.

It has 1 megohm input resistance with an additional 10M in the probe. The 10M probe resistor is switched out for a-c and resistance measurements.

Calibration is relatively simple. Usually there will be two pots; one for DC-volts and the other for AC-volts. As I recall, there was no special calibration for the resistance ranges. (Considering the logarithmic "ohms" scale, calibration really isn't all that important.

As you prepare to calibrate, turn the VTVM on for 24 hours, then do the calibration. Especially if you replace the tube(s), allow the unit to age (power on) for 24-48 hours before calibrating.

Your "standards" for calibrating sound fine. An alternative might be comparison with a "known" meter; perhaps a digital known to be accurate.

It's a neat instrument. Not 1990s technology, but certainly useable within its constraints.

>the frequency you are trransmitting on. Hope this helps.

I didn't know the 530 would let you split across bands on memory mode. This is exactly what we need it to do, and we don't need to receive on the tranmsmit freq (we're not using the crossband repeat to boost up to a repeater; we're using it as the repeater itself for areas that have no amateur repeater coverage).

Thanks...

RadioMap Service Expands into
Ohio, Pennsylvania, Missouri

by Bob Parnass, AJ9S

As someone involved in solving radio and TV interference
problems, I've spent a lot of time identifying the
transmitting antennas and towers I see in my travels. An
FCC database is useful, but the transmitter site information
is either vague or incorrect.

Over 15% of the FCC licenses, including many fast food
restaurants, contain transmitter latitude and longitude but
specify no transmitter city. To determine the location of
those transmitters requires using the latitude and longitude
information.

I developed a process which produces a color map of FCC
licensed and selected FAA transmitter sites in an area,
given a center location (latitude/longitude) and a range (in
miles). I call this new innovation a RadioMap(TM). It
allows you to identify antenna sites (including paging and
cellular phone cell sites) and visualize the transmitter
locations in your neighborhood, around your office, near
your repeater, at an airport, and other places of interest
-- from VLF through microwave.

A map of local transmitter sites is very useful when solving
intermod problems and is of interest to scanner buffs, too.

Streets, rivers, and ham radio stations are not shown as
they would clutter the RadioMap. RadioMap includes key
sheets which list frequencies, callsigns, and licensee
names. In rural areas, ranges of up to 10 miles are
possible, while ranges of 1/2 to 2 miles produce best
results in urban cities.

Currently, I produce custom color 8-1/2" by 11" RadioMaps,
suitable for framing or laminating, only for areas in:

Illinois
Indiana

Michigan
Missouri
New York
Ohio
Pennsylvania
Wisconsin

Watch for future announcements as new states are added.

Send $19.95 ($16.95 + $3 for shipping & handling) for each
color RadioMap, your name, address, and telephone number,
along with center location (lat/long or nearest intersection
of 2 streets) to: Bob Parnass, 2350 Douglas Road, Oswego, IL
60543. tel. (708)554-3839 6-10 PM central time.

We've seen that in southeastern Pennsylvania. Not only does it mock the
"amateur" (not-for-profit) concept, but it establishes the very dangerous
precedent that hams are willing to pay for spectrum. Not a big step from
there to _big_ license fees, right?

> The solution is simple. When a trusteeship changes, the
> coordination goes away. People should be free to sell equipment,
> but the coordination can't be sold. Equal opportunity should be given
> to those who are new to the repeater game as someone who just
> buys an existing box to the coordination process. If they want to share
> the pair, that's fine too. But, then the "$10,000 value" goes way down.

It's _supposed_ to work that way. Here, apparently the former owner
colluded with the buyer to "lend" the repeater, coordinate a new location
under the "coordinated" owner, and then after a period of time apply for
coordination of the de facto new owner at the coordinated location. The
coordinating group had already been threatened with a lawsuit by the
frequency seller, for trying to "uncoordinate" him because his repeater had
not been on the air for over a year. In this case it's not the
coordinators, they're just volunteers, ordinary hams like most of us, who
don't have the funds to defend themselves against a lawsuit over a
volunteer job they're doing.

-------------Response ------- --

I don't know the answer to your specific question about DXCC
and WAS, but I have an opinion.

In my opinion it should not make any difference for any award
whether the card is signed, stamped or whatever by the person
verifying the contact. The people or organizations who administer
the award programs do not have my signature on file, nor the
signature or stamp of other QSL manager, so how can they say a
card is invalid.

However, major organizations like the ARRL, CQ, DARC see thousands
of cards and probably learn over a period of time what cards are
valid and which ones are not.

Just my opinion, for what it is worth.

Bob-

There is quite a bit of SSB activity, but I haven't heard anyone on either Two or Six AM in years. Of course, I haven't listened!

The method of rating power of the SR-46, and most other AM rigs older than ten years, is the D. C. power INPUT to the final stage. It would be reasonable to expect an efficiency of around 50%, so RF Output might be in the order of 30 to 35 watts. If you're only getting 10 watts output, then either we misunderstand the power rating, or maintenance is needed.

How could we misunderstand 65 watts? First, assume DC power is meant. Then, consider that Peak power of a 100% modulated AM signal is four times the average. This brings the expected carrier power down to 8 watts, which is quite close to 10! I doubt this is the case. However, a CW power rating might provide a clue.

If anyone wants to start an AM net, I can dig out my old "Sixer" and "Twoer", and join in. Their super-regenerative receivers are so broad, transmit crystal frequency isn't critical at all!

From: ip@g8sjp.demon.co.uk
Message-ID: <780866319snz@g8sjp.demon.co.uk>
Source record: 259372

With all the talk of Wouff Hong (sic) I decided to search my magazine archives as a research project. Not surprisingly, I turned up a singular reference, which I quote below verbatim:-

"Wouff-Hong: the ultimate amateur radio torture instrument for those causing unnecessary interference. It was originally mentioned by The Old Man (Hiram Percy Maxim) in a facetious QST magazine editorial decrying rotten QRM (interference). Other fearsome amateur radio torture instruments are the Rettysnitch and the Uggerumph."
- Ham Radio Horizons, July 1978, page 52

SO ... it would seem that those newsgroup participants who claim membership maybe ought to settle down :-)

BUT ... what of these " .... fearsome torture instruments ..." ? Anyone have any further information ?

Good morning. It's Sunday the 2nd of October and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

An we start this week with details of the largest event in the HF DXer's calendar which takes place next weekend. The RSGB International HF and IOTA Convention is held from Friday the 7th until Sunday the 9th of October, at the Beaumont Conference Centre, near Windsor in Berkshire. A large number of top DXers from around the world will be in attendance, but this is an event which has something for the beginner as well as the expert. And although many of the Convention visitors will be staying overnight, the event is open to day visitors. There is a full programme of lectures, slide shows and discussion sessions on both the Saturday and the Sunday and many special interest groups will be represented. The special event station will use the unusual call GB 301 OTA. Morse tests will be available on demand, subject to producing two passport-type photographs and test fee. Details of the HF Convention can be found on page 19 of October's edition of Radio Communication, or can be obtained from RSGB Headquarters. Enquiries should go to Neville Cheadle on 01442 62929.

The next RSGB Microwave Round Table meeting is on Sunday the 16th of October at 10am. Organised by the RSGB Southern Microwave Group, the event will be at the Flight Refuelling Amateur Radio Society Clubhouse, Merley, near Wimborne in Dorset. The attractions include technical talks, calibration and alignment facilities and a demonstration of receiver noise figure measurements, plus of course the usual round table discussions. There will be a bring and buy stand, hot drinks and snacks. For further details telephone Mike, G3LYP, on 0494 881298.

An RSGB Regional Meeting takes place on Saturday the 22nd of October in Bristol. See October's Radio Communication for further details and a map of the venue.

The Kidderminster 70 centimetre repeater, GB3KR, is back on the air on channel RB3, which has its output on 433.075MHz and input on 434.675MHz. Due to site problems the antenna is not at its intended height, and consequently the repeater's coverage has been reduced. Further details and/or reports should go to the repeater keeper G8NTU, whose address is correct in the RSGB Call Book.

Repeater GB3LR, was closed down for extensive engineering diagnostic work on Tuesday the 20th of September. The repeater is located at Newhaven, and normally operates on channel RB11. Further information from the repeater keeper G6RZA, whose address is correct in the RSGB

Call Book.

Packet repeaters, GB7WH and GB7MC, on 4 metres, 70 centimetres and 23 centimetres, have all been switched off for reassessment and realignment of linking arrangements. The repeaters are located at Winter Hill. Further information from the repeater keeper G3WPF, whose address is correct in the RSGB Call Book.

Packet repeater GB7PX, was scheduled to take over from GB3PX, with effect from yesterday, Saturday the 1st of October. The repeater which is operated by the Cambridge Repeater Group is located at Madingley, near Cambridge. Further details and/or reports should go to the repeater keeper Tony, G4NBS, whose address is correct in the RSGB Call Book.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Hotel and G7 Tango Tango series, and Novice calls in the 2 0 Alpha India and 2 1 Delta Kilo series.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Honduras, HR1ERL is signing HQ1T from now until the end of October.

From Vanuatu, W6YA will sign YJ0YA or YJ0AYA from today, Sunday the 2nd until Wednesday the 12th of October. Activity will be on all bands, with emphasis on the WARC bands, on CW.

From Madeira Island, DL8KWS and DL3KUD will sign own-call/CT3 from Thursday the 6th until Thursday the 27th of October on all HF bands.

And from Sao Tome, S92SS is now active on 160 metres on Fridays and Saturdays. Check 1.835MHz at around 1730 UTC.

Now the rallies we know of for today, Sunday the 2nd of October:

The Blackwood and District Amateur Radio Society Rally is being held at the Community College, Oakdale, near Blackwood, Gwent. Doors open at 10.30am. The event features trade stands, a bring and buy stall with a '1 per item or job-lot' fee, and raffles. Talk-in is on 2 metres, channel S22.

The Great Lumley Radio Rally is being held at Great Lumley, near Chester-le-Street, County Durham. Doors open at 11am, or from 10.30 for disabled visitors. The event features trade stands, a bring and buy stall and refreshments. Under-14s accompanied by an adult will be admitted free.

In addition to the RSGB HF Convention, there are three events taking place next weekend the 8th and 9th of October:

On Saturday the 8th and Sunday the 9th, the All Ireland International Radio and Hobbies Exhibition takes place in St Patrick Hall, Cathedral Road, Armagh. Doors open 12 noon on both days. The event features many

trade stands, including radio, computer and much more. Full catering and bar facilities will be available. Details from John, GI8RLE, on 0762 870423.

On Sunday the 9th of October, the Kidderminster and District Amateur Radio Society Rally is at Stourport on Severn High School, Minster Road, Stourport on Severn. Doors open at 10am. The event features the usual trade stands, a bring and buy stall and refreshments. Talk-in will be on 2 metres and 70 centimetres. Details from Malcolm, G8JTL on 0384 894019.

Also next Sunday, the South Devon Radio Club Computercations'94 Amateur Radio & Computer Rally is held at the Hillhead Campsite, Hill Head, Kingswear Road, Brixham. Doors open at 10am. The event features trade stands for radio & computers, a bring & buy stall, a raffle and refreshments. Talk-in will be on 2 metres, channel S22. Overnight camping and caravan facilities will be available. Further details from Bill, G6ZRM on 01803 522216.

Next a date for your diary:

The Leicester Amateur Radio Show is to be held at The Granby Halls, Leicester on Friday the 21st and Saturday the 22nd of October. Parking arrangement are the same as in previous years, the old cattle market is still being used but it has a height restriction. The October edition of RadCom has full details of the show including a stand layout. Further information can be obtained from Frank, G4PDZ, on 0116 287 1086.

Now for the HF contest news:

The RSGB 21/28MHz SSB Contest is taking place today, Sunday the 2nd, from 0700 to 1900 UTC. See June RadCom page 82 for full details.

The VK/ZL/Oceania CW Contest starts at 1000 next Saturday the 8th and runs for 24 hours. See September RadCom for further details.

Here is some VHF contest news:

The RSGB and the IARU 432MHz to 24GHz Contest finishes today Sunday the 2nd of October at 1400 UTC.

The WAB 50MHz Phone Contest runs from 0900 to 1400 UTC today Sunday the 2nd. There are sections for Fixed, Portable, Mobile and Listener.

The first of five RSGB 1.3GHz and 2.3GHz Cumulative events is next Tuesday the 4th from 2030 to 2300 local time. See July's RadCom for details.

Another RSGB 24GHz Summer Cumulative Contest takes place next Sunday the 9th from 0900 to 2100 UTC. See April's RadCom for details.

Special event stations active this week include:

GB2MFY, Meteor Flight Yatesbury, on most HF bands until Friday the 14th from Yatesbury, Wiltshire. The site is at the old No 2 RAF Radio School, where ground and aircrew wireless operators were trained.

Also GB0LPD is at Lochpark Adventure Centre, Drummuir Castle Estate, Drummuir, Banff next weekend, the 8th and 9th. The occasion is Centre Activity Weekend, which consists of outdoor events geared for the disabled as well as the able bodied. Operation will be on most HF bands.

And now the solar factual data:

The period from the 19th to the 25th of September saw the quiet side of the sun looking our way. Spots and flux remained very low and the geomagnetic field was also very quiet. There was only one flare reported, a B1/SF - the 'SF' means 'sub faint'. In normal times such flares would not be reported, being so very small.

The sunspot indices fell to zero on the 20th and 21st, but recovered by the 25th to a level of 35. The period meaned at only 17. Solar flux levels, not surprisingly, remained almost steady and averaged 71 units. The geomagnetic field has been at quiet levels most of the period. The daily highest Ap index was only 10 units on the 25th, with other days down to between 3 and 5 units. The period averaged 4 units. The state has been nil 'nothing to report' throughout the period.

We regret that the aa indices are not to hand this week. The X-Ray flux generally has continued to decline, with levels remaining at only A1.0 up to the 24th, when a slight rise to A2.8 by the 25th meant that the period averaged A1.2 units. The electron fluence levels declined to moderate for most of the period. The monthly average of the planetary geomagnetic field for August was Ap 8. The 6 month smoothed level for February 94 was 17.9.

I'll repeat the figures. Spots - 17; Flux - 71; Ap index - 5.7; X-ray flux - A1.2; Ap August - 8.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon {Newsreaders - this is pronounced Mer-don}, averaged 6.4MHz. This varied little from day to day. The darkness hour lows averaged 2.6MHz, and this, too, varied little. The daytime highs are mostly around 18.00 hours, but on odd days the high is now being reported at around 1300 hours, which is closer to the time we would expect. The darkness hour lows are still around 05.00, hours - much as would be expected.

I'll repeat the figures. Highs - 6.4MHz; lows - 2.6MHz.

Now the ionospheric data for the north:

It is believed that Ekaterinberg has now closed down. Unfortunately, no alternative data is available. The new ionosonde at DRAL is still not working properly but in time it is hoped that this data will become available.

And lastly the solar forecast:

This week, the more active side of the sun will be coming into view. Solar flux levels are expected to be into the 85s with the possibility

of some small flare activity. The geomagnetic field may be very unsettled at first particularly at higher latitudes, due to the passage of a small coronal hole, but quieter levels should prevail for the rest of the week. Ionospheric MUFs during daylight are expected to reach about 21MHz in the south, and darkness hours about 12MHz. The seasonal changes are now beginning to influence the bands with east/west paths becoming easier, but the best openings are still more north/south.

And that's the end of the solar information.

--

GB2RS is prepared by the Radio Society of Great Britain and is broadcast in the 80m, 40m, 6m and 2m bands.

But light (hence IR) is also a portion of the EM spectrum, right?
Granted, 700nm IR is at 428 THz (yes, that's terahertz, meaning 428,000
GHz), and you probably wouldn't do many things in the same way as we do on
the lower bands...

ARRL Bulletin 75 ARLB075
From ARRL Headquarters
Newington CT September 29, 1994
To all radio amateurs

SB QST ARL ARLB075
ARLB075 FCC seeks actions

The FCC has ordered three California amateurs to show cause why their station licenses should not be revoked, and has ordered their operator licenses suspended.

The three, all Extra Class volunteer examiners, are accused by the Commission of signing paperwork indicating that several persons had passed amateur exam elements when, the FCC says, they had not. The exams, the FCC said, were not administered at all.

The FCC also said that, in response to its inquiries, all three VEs replied with answers that the FCC called ''misrepresentations of material fact.''

The three amateurs are James B. Williams, AA6TC, of Wilmington, California; and Rose Marie Flores, N6WPR, and Robert L. Flores, N6WPQ, both of Santa Monica, California.

The session was conducted under the coordination of the ARRL/VEC. The ARRL/VEC suspended the accreditations of the three volunteer examiners when questions arose in late 1993.

The three have 30 days to request a hearing before an administrative law judge.

DX Bulletin 59 ARLD059
From ARRL Headquarters
Newington CT September 29, 1994
To all radio amateurs

SB DX ARL ARLD059
ARLD059 DX news

Thanks to Bob, W5KNE, QRZ DX, Tedd, KB8NW, Al, ZS2U, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral Column from the pages of QST magazine. Thanks.

TONGO. Baldur, DJ6SI, is signing 5V7DB, with most activity on 40, 30, 20, 17 and 15 meter CW. There is some RTTY, apparently by operator DJ6JC. QSLs for CW and SSB via DJ6SI. There has yet to be a route mentioned for RTTY contacts.

FIJI. Ron, ZL1AMO, having completed his C21/ZL1AMO stint, is now signing 3D2RW, and has been worked from the northeast on 7006 kHz between 0945 and 1015z. He operates mostly CW on 40 and 30 meters. It has been reported that his next stop will be T31. QSL via CBA.

MICRONESIA. Kazu, JA0VSH, and Miyuki, JG0PBJ, will be on from Pohnpei October 1 to 10 as V63KZ and V63MP respectively. They will be on all bands with CW and SSB. QSL via their home calls or the JA QSL bureau.

AFRICAN SAFARI. Listen for Kjell, SM7DZZ, to be signing D2ZZ and then V51/SM7DZZ before returning later this year to C91Z. QSL via SM7DZZ.

CHAD. F5IXR should be active until around year end. He has been signing TT8/F5IXR, but has requested the call TT8XR. No documentation has been received by the DXCC Desk for this operation.

SOUTH AFRICA. ZS2U reports that with South African homelands being incorporated into South Africa, and the country now divided into nine provinces vs the previous five, there may be some affect on call signs. So ZS2U will operate as S42U from The Ciskei from October 5 to 10 on 80 40 20 and 15 meter CW and SSB. QSL via ZS2U. Please note that S4 is not on the ITU assigned prefix list and

presently has no DXCC credit.

COMOROS. JA1ELY, JA1ETQ, JA1IDY and JL1UXH are planning a DXpedition to D6. Though no dates have been mentioned, plans call for CW, SSB, RTTY, SSTV, and satellite activity.

GLORIOSO. Word from the 256 Group is that FR/G activity is planned for December and then in July. The operator will probably be Jacques, FR5ZU.

BELIZE. W5ZPA, KV5E, XE1CI and W5JYK will be on from Ambergris Cay, IOTA NA073, as V31MP, V31JY, V31CK and V31YK respectively. This operation is slated for October 4 through 7. Plans call for three stations to be on the air, with CW, SSB and RTTY. QSL w/SASE to home call signs.

MYANMAR. It has been reported that Ray, HS0AC, along with JA1UT, and several others did an SSTV demo for telecom authorities recently. Several contacts were made using the call XY1HT over a two day period. It appears some progress has been made for future amateur operations.

THIS WEEKEND ON THE RADIO. The California QSO Party, sponsored by the Northern California Contest Club, runs from 1600z October 1 to 2200z October 2. Bands are 160 through 2 meters, excluding the WARC bands. Exchange QSO number and state. CA stations exchange county instead of state, VE stations exchange province, and DX stations exchange DXCC country.

IARU sister society, the RSGB, sponsors the RSGB 21/28 MHz SSB Contest, which is from 0700z to 1900z October 2. Exchange signal report and serial number starting with 001. UK stations will also exchange county code.

NZART, the New Zealand IARU member society, puts on the VK/ZL/Oceania DX Contest SSB from 1000z October 1 to 1000z October 2. Exchange signal report and serial number starting with 001.

Details on all three of these operating events appear on page 125 in September QST. Good luck.

I am interested in buying a FT5200 for my motorcycle.... I am looking for
a bullet proof 2/70cm with a detachable face that can operate Xband Repeat.

Don't need many memories... ~20/band would be more than enough....

I am also interested in a Kenwood 733/732 or anything that meets the above.

Suggestions/experiences wanted.... thanks, Bill

>reasonably helpful. I've never had any problems requiring service, etc...
>They seem like a very reputable company.

I've never ordered from Tucker, but I did write for a quote on some manuals
I needed. I got a reply less than a week after I wrote, listing availability
and prices. Their catalogs are very informative and I would recommend them
to anyone who needed stuff *immediately* and hang the price!

Unfortunately, their prices are too high for my budget on instruments, though
I'd like to give them a book order someday. Alas, I'll still get my
equipment at the fests the "old fashioned way". Pity.

>Note that the restriction must surely apply to car cellular phones - they
>are external, radio, etc. Bring that up at a meeting and I bet those
>scum &^*&^$ will do an about-face!!!

Wishful thinking. (I wish it was that simple, too, honest :-) . It is
clear in all cases that I have seen that the covenant in the deed applies
to the house (structure) and surrounding structures, but not automobiles.
There are sometimes also restrictions on sizes of vehicles in the lots,
but I have never seen one that applies to the antennas on a vehicle.

So....I always recommend a good Texas Bugcatcher with a big weeney
roaster (1 kw amp) in the trunk. (Along with attic antennas or other
allowable stuff.) Keeps you on ham radio until you can convince them
that an antenna is OK, or until you buy another house, or until you find
that your attic antenna works just fine for your ham lifestyle (this has
happened!)

>maybe ought to settle down :-)
>
>Iain Philipps

So maybe it never occurred to someone there might be a secret society
based on this instrument of torture. But then it is a secret society.

I'd say more, but it is not permitted.

Oops... I forgot. I have acess to both PCs and Macs. Thanks for all those who emailed! Over 12 in 24 hours!

In summary: I was told abvout the following two FTP sites that have ham stuff:

You should be able to find them at: oak.oakland.edu"/pub/msdos/hamradio/"
File names are: ext21.zip adv21.zip,gen21.zip,tec22.zip,nov22.zip

D.J. Wang N2YKP

Try ftp.qrz.com I believe that they have the latest tests. Good Luck!

pbp KR4UJ

Thanks again!

4922. Looking for: Icom IC-215 or Yaesu FT-221

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-29 23:53:22 UTC
From: s2202629@np.ac.sg
Message-ID: <36fk1i$osi@nova.np.ac.sg>
Source record: 259208
Cross-posted to: rec.radio.amateur.misc,aus.radio

I am looking for (1) information, (2) manuals, (3) people who own, or have owned and (4) someone who owns, and wants to sell one of the following rigs:

Icom IC-215
Yaesu FT-221

I would like to purchase one of the above rigs, to setup a station and get my amateur license (In S'pore, we need to get our equipt inspected first, before they will issue a licence).

As I'm just a student, my budget is pretty low. The reason why I'm choosing one of the above rigs, as it's from a list (of about 10) which is on the "type-approved" list. (The rigs above are possibly even older than I am!)

If you have own, or have owned one of the above rigs, I'd like to hear your feedback on how it performed, etc. As for information, anyone who can tell me a magazine who reviewed any of the above would be good. (I have access to QST around '75-'80, and Practical Wireless, erm, quite a lot of issues : They're from my school library).

If you do have a unit of the above, please email me and quote a price. I hope the transceiver is in good condition, and I need to know if any modifications have been carried out on it. Please also tell me what you will be giving me for your price, and hopefully, I can fit it into my budget (P&P is going to cost quite a bit too!)

I also need to know the Manufacturer (Icom/Yaesu), Model, Emission, Transmitter Output Power, Serial Number (very important, the local licencing authority will _NOT_ issue a license/ approve a un-serialed rig - this is the reason why I can't homebrew one!) and operating frequency.

Because in Singapore, the 2m band is shared, Amateurs only have about 4-5 spot frequencies available. I will need to know what xtals you will have, and if possible, for me to get one thats on a freq in S'pore. At minimum, I will need a xtal-table (formula?) for the rig.

Please email me if you can help me, I do hope to get on the air.
Thanks!

PS: I've been flipping thru QST '75-'80, and I can't seem to find a single advert for the Icom IC-215, can anyone look thru any of your old magazines,

**********************************************************************
* University and School Amateur Radio Club List Version .04b *
**********************************************************************

April 3,1994

Welcome to the University and School Amateur Radio Club list. The
purpose of this list is to provide information about amateur radio
clubs at schools and universities. The current editor of this list
is...
Jeffrey Luszcz N2TIQ
President Cornell Amateur Radio Club W2CXM
jrl2@cornell.edu

This is the Beta version of this list so give me some feedback
on what you like and dislike about the data format and general
presentation.

This list is availible for ftp from the following servers:
oak.oakland.edu
/pub/hamradio/docs/misc/ham.faq.univ_Version_.04b.txt

Also I will be posting this list once every two months onto the
following newsgroups:

rec.radio.amateur.misc

!!!IMPORTANT!!!
If you do NOT want your club's information presented here
then please inform me of this wish through email.
!!!IMPORTANT!!!

The current data format for submitting club information is....
--------
SCHOOL:
NAME:
ADDRESS:
CLUB OFFICERS
REPEATERS:
CLUB STATION:
STATION TELE#:
ORGANIZATIONS:
YEAR STARTED:
NUMBER OF MEMBERS:
BANDS ACTIVE:
E-MAIL ADDRESSES:
HISTORY
```

If everyone follows this form it makes it easier to edit and
maintain the list. I see this format changing as the list grows
and new concerns become raised. Please address your email to me
as follows FAQ -(name of school). For example...

Subject: FAQ - Cornell University

This makes it easy for me to move the mail around and put it in
the right folders. I am working on getting this information into
a datbase which will let me change the FAQ around easier and put
it in alphabetical order. Watch this space.

DISCLAIMER:
Feel free to copy and disperse this list freely as long as it
remains in its original format. If you do not want your clubs
information in this list then email the list owner and tell him so.

Also...
I am unable to provide any other information regarding college clubs
other than what appears on the list. Either the organization has
requested that it be kept confidential, or I just don't know. If
you do find out, please direct such information to my submission
address above so that others may benefit from it.

****
* Here is the list *

ARRL affiliated since 1949 (our records say it
goes back to 1921, but ARRL has no record of this)
YEAR STARTED:

1914
NUMBER OF MEMBERS:
22 voting members, roster of around 75
BANDS ACTIVE:
HF bands, 2 meter and 440 (some sat work)
E-MAIL ADDRESSES:
general membership: W6BB@violet.berkeley.edu
officers/board: hams@violet.berkeley.edu

HISTORY
I worked on this last year. Essentially, we were formed
in 1914 as one of the first stations on the west coast.
We started DX receiving experiments at this time, and
soon established skeds with the University of Washington
and a few other schools. Our first call was 6BB and dates
back to at least 1920. I think oneof our members was the
first woman to get a commercial radiotelephone operators
license in 1924. Early on we were also connected withthe
commercial station here at Cal, and did early broadcasts
from football games, alumni dinners, etc. Club fell into
decline in the1930's, but was revived after the war,
and has followed typical boomand bust cycles since.

secretary@w9bgx.nuars.nwu.edu
advisor@w9bgx.nuars.nwu.edu
nuars-request@w9bgx.nuars.nwu.edu (LISTSERVER)

HISTORY
The Northwestern Amateur Radio Society dates back until late
40s or early 50s. It has been affiliated with the McCormick
school of Technology and the department of Electrical
Engineering since its inception. The club has achieved many
awards over the years, including one of the very early 5-band
DXCC's.

In 1991 a storm took down our main tower and antenna, and the
shack had fallen into disrepair. However, in 1992 Drs. Allen
Taflove and Alan Sahakian took over the faculty advisor
position, and launched an effort to bring the station back on

the air. In the summer of 1992 a new tower was erected at a
better rooftop spot than before at a cost of over $10,000, and
faculty and student members together cleaned and renovated the
shack, and the old transceiver equipment was replaced. We
also pulled in Ethernet cabling for Internet, and got a
computer (w9bgx.nuars.nwu.edu).

We are currently looking into holding a course in the
Department of Electrical Engineering which will use the
resources of the Amateur Radio club, and hope it will increase
student participation.

==========

SCHOOL:
University of Pennsylvania
NAME:
University of Pennsylvania ARC N3KZ
ADDRESS:

CLUB OFFICERS
President: Matt Gomez, AA3FQ mgomez@mail.sas.upenn.edu
Vice President: Eric Reiter, WI2N ericj@eniac.seas.upenn.edu
Technical Director: Jeff DePolo, WN3A depolo@eniac.seas.upenn.edu

REPEATERS:
see below
CLUB STATION:
Station 1 - Philadelphia (main campus)

Kenwood TS-940S, Alpha 76A, Icom 275H, Icom 375A, Icom 471A, PK-232,
80286,Azden PCS4000, power supplies, headsets, mics, Vibroplex
iambic, keyer,KLM KT-34A @100', Cushcraft R5 @ 60', 40m dipole @ 60',
KLM 2m/440 OSCAR,yagis, Diamond X200 @ 100', various other VHF and
UHF antennas, one tower on roof - top of tower is at 100', and all
of the usual accessories.

Station is in the engineering building on the 2nd floor. It's been
in the same room since 1924.

Station 2 - Valley Forge

Kenwood TS-530SP (soon to upgrade to TS-850), Dentron Clipperton-L
linear,Kenwood TM-742A 2/440/6m, Icom 271H, 80286, Telrex 5-el
tribander @ 40',3-element 40m monobander @ 70', Mosley TS-33 @ 40',
40m dipole @ 40',75m dipole @ 45', Diamond U2000, long-boom VHF/UHF
yagis, Hustler 2m G6,other VHF and UHF antennas, 5 towers total.

This station is on top of Mt. Misery at the U of P Microwave
Research Center. We go out to this station on weekends, for
field day, etc. It used to be a Nike Missle tracking station
back in the cold war days and now Penn uses it as a research
center. Great location - the highest point in the Philadelphia area.

Linked UHF Repeater System

Main site: Mt. Misery, Valley Forge, PA. 443.8+, 750'ASL, 2.6kW ERP
Phil site: Penncampus on top of high rise, 440' ASL, receive-only
Eagles Peak: Lebanon county, PA 442.400+, 1420' ASL, 800 watts ERP
6m remote: Mt. Misery, Valley Forge, PA 52.525 700' ASL, 200 W ERP
Addtional sites will be going up this spring/summer.

Co-sponsored repeaters

These two repeaters are on Penn's campus on High Rise North. We co-
sponsor the repeaters with the clubs listed:

146.685- Holmesburg ARC 440' ASL, 800 watts ERP, two remote receivers
442.700+ NEAR-FAR ARC 440' ASL, 700 watts ERP
ORGANIZATIONS:
YEAR STARTED:
NUMBER OF MEMBERS:
Total members: about 65.
Active members: about 20.
Really active members: about 10.
BANDS ACTIVE:
most
E-MAIL ADDRESSES:
HISTORY
The club was founded around 1921 from what we can tell. The first
call sign that the club had was 3KZ. When they switched to the W
calls, we were W3ABT. In the 70's, when you could request a call,
we got N3KZ to get the old 3KZ back.

- listserv@knuth.mtsu.edu (listserver)

HISTORY
The MTSU club has been around since at least the 1960s, first as a trusteeship of the Dept. of Industrial Studies, and now under the Dept. of Computer Science. Membership has been small because the historic mission of the University was that of a teacher's college (thankfully that's changing). The Raider Amateur Radio Club is a key player in the packet radio field, and its members provide part of the core support in a project to bring high-speed (56k bps and up) packet connectivity to the entire state of Tennessee, from Mountain City to Memphis.

HISTORY
The club has been around for many years. The original
club was W0YI. It was founded over 75 years ago. The
W0YI club call is still maintained here at ISU by one
of our faculty members.

Our club has approximately 20 members who are somewhat
active. There are many more hams here at ISU, but many
of them are too busy with their studies and other clubs
to become involved with the CARC. We are always in
search of new membership.

Our members can usually be found on 2meters or 70cm.
At this point in time, there is very little HF activity
in the club.
Our club has been involved at ISU for many years. We have
meetings several times per month. Every spring, we set up

an open house display and help with communications for the
annual VEISHEA celebration, which is the largest student-run
event of its kind in the United States. We provide
communications for the VEISHEA parade, calling tow trucks,
ambulances, and the police if the need arises.
It is best for new prospective members or people
interested in the club to call me or Clyde Walter at
the numbers above. I am only at ISU during the Fall and
Spring semesters, while Clyde is a professor who is here
year around if the need arises to contact the club in the
summer months.

HISTORY

We have a club call W0QEV that has been ours at least since 1947 which is the oldest log that we can find. The league claims that we have been affiliated with them since 1949 which makes us one of the older if not oldest club station in the zero call region. This far back though and nobody really knows. Someday we will have to search though old call books from just after the war to see just when that call appears.

The club started as part of the department of electrical engineering here. It became a student union organization around a decade ago and as a result has a steady source of funds. As far as membership, if only that was as steady as funding. The club has students, graduate students, professors, university staff and even alumni. Probably around 20 members but only half that many are easy to get a hold of. There are always to few undergrads!

An addendum to the above. After the war st. louis became part of the zero district as opposed to the old nine district. We have reason to believe that the club was around even before the war, but don't know under which call or how we can research this. The ARRL doesn't know and the fcc doesn't even bother with this type of stuff.

W2SZ sports its own Usenet Newsgroup. It's rpi.union.ham-radio.
Some off campus systems may not be able get it.
HISTORY

W2SZ was originally created as 2SZ by the Troy YMCA around 1910. It was turned over to Rensselaer Polytechnic Institute in 1917 where it has been providing services to its members and the community ever since.

The station provides Amateurs with an opportunity to keep in contact with friends at home as well as providing for the learning of radio and basic electronics. The station also provides a friendly and relaxed atmosphere where members can come to get away from the stress of classes and work.

W2SZ, known to members are Zed, is a friendly group of people that are willing to share their knowledge and help those who have an interest in ham radio to get, or advance, their license. In addition they are willing to share their knowledge in the proper maintenance and operation of both club and personal equipment.

The club currently consists of about 30 members and is located at Six Sunset Terrace, Troy, NY. It also has contact with many of the past members who have long since graduated from RPI, or community members who live in the Troy area. It provides the members with many contacts, and also provides the community with a viable method of communication through the repeaters that the club has. In addition to day to day communications, W2SZ also offers lines of communication during periods of crisis. Examples of the Club's community involvement were during the San Francisco earthquake, and during Operation Desert Storm.

HISTORY
Oldest license found - 5YM - dated 6/4/20, but there is anecdotal
evidence that we may have been licensed in 1914. The station was
active in the early '20s prior to the opening of KFMQ, the U of A's
first broadcast station. Logs have been found for the '32-'34 period
when the station (*W*5YM) was active on 'phone using a Class B
modulation amplifier built as a class project. Loy Barton, inventor
of Class B, was a graduate and faculty member of the U of A.
Haven't found any relics from '34 - '49. 1949 we were granted
W5JNI and our station was in the then-Business Admin building.
We suspect the trustee knew nothing of the previous station as
he was not in engineering. We returned to W5YM in 1952 and the
club has been going strong pretty much ever since.

You're far better off buying than building, unless you just want a
single TV channel. Even in that case, it may be better to buy a
single channel commercial unit. There are a lot of non-obvious esoteric
design features in commercial antennas that are not published anywhere
in sufficient detail to duplicate and I certainly have never seen
a construction project article for one.
Plus with the cost of aluminum in small quantities, you couldn't build
one for less than $50 anyway in all likelihood.

They'll be real pissed.

4926. UNIVERSITY RADIO CLUB

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-30 00:22:32 UTC
From: wolfgang.scherer@ccxbbs.uunet.ve
Message-ID: <9409292022.0SMH200@ccxbbs.uunet.ve>
Source record: 259353

Earlier this week Rich (N3HLS) asked about existing University Radio Clubs. I don't know if he was refering to the USA only, but I can tell you about the YV5USB, or the Simon Bolivar University Radio Club, located just outside of Caracas.
The club was founded 22 years ago, and since more than 200 students have been in its ranks. Today it only has about 8 members, and two offices: one for reunions and a small shack located at the roof-top of the Electronics building inside the campus. We don't have much in terms of equipment, but plans are underway to change that fact. We have an old FT101E, FL2100B, two TRS-80 IV (for RTTY), verticals for 2m and 70 cm, a Mosley TA33 for 10,15 & 20m and dipoles for 40 and 80m.
We welcome any mail from fellows hams, specially from other university radio clubs.

73's

Message-ID: <1994Sep29.92693.533345@gatenod.aldhfn.org>
Source record: 259376

Regarding the Yaesu FT-530 HT:

I have not been able to find a match to the coaxial power connector on the top of this radio. My Radio Shack either doesn't stock it or was out of stock. If anyone knows where this plug can be obtained at *reasonable* cost please let me know

Thanks Tim KF8XW Akron, Ohio

For those interested, there is a university club mailing list you can
join. The list is "ham-univ@listserver.njit.edu". Its a normal LISTERV- send
subscription requests to "ham-univ-request@listserver.njit.edu" (*PLEASE*
dont send requests to the list itself!!!)

I heard a unusual conversation on 3.975 MHz. A group called the I-bank net (eye???) were talking.

1. What exactly is a net?

2. They was group was talking about one of their member being silent key. I was under the impression they meant he was dead. I'm I right?

It's interesting that his original post was from the US Naval Academy
Cadet email center yet his apology arrives via anon.penet.fi. I bet
he caught hell from the Academy admin!

: I just passed my tech exams this last weekend. So what happens now?

: Signed,

: A hopefully Future HAM.

You'll get a callsign, Sam - it just won't be N6???. You'll get a
novice-class call; i.e., KE6???

When I passed my General written and 5 WPM code on St Paddy's day 1991, I
qualified for a Tech Plus - and there were no more 1X3 calls in the 4
call district. I got KC4ZRF. That is the same situation you're in
regarding callsigns.

Congratulations on the test, OM.

>It means that you will get a Novice class license instead, if I am
>correct. I am a Tech No Code but carry a Novice license because all the
>Tech licenses for group 7 have been issued.

True, but all the call signs aren't really used up. A _lot_ of them have
long since expired, yet the FCC isn't recycling them. Not sure why, though.

From: dms4s@uvacs.cs.Virginia.EDU
Message-ID: <CwxI1o.3H8@murdoch.acc.Virginia.EDU>
Source record: 259365

Help me if you can! I am searching for a long time friend of the family. We have looked all over the net, directory assistance.....everywhere for this ham. His name is Bill Garlough. The most recent address we had for him was in Highland Village, TX. His call sign is WB4QKZ.

Please, if anyone has any idea where we might find Bill let us know. You can reach my father, Bob Hill (W4NIM) and my mother, Carol Hill (WA4LHB) martitime mobile in the Florida Keys. You can also return an e-mail response to this address.

Please help us find a dear friend and a long time ham.

Bill Garlough WB4QKZ.

Thank you,

Marie Hill-Shiflet

Hi Bill. I have the FT5200 and it works just fine. It has 13
memories/band and puts out 5W or 50W (5W or 35W on UHF). No
middle power like 20 to 25 watts. It has a built in duplexer.
X-band repeat does not work on all freq combinations but does
work ok on most that I have tried. I am using a dual band
Larson antenna.

73 and good luck.
Jeff.

Still do, but it is 1750 and is not needed on each transmission, only to bring transmitter up from squelched off. If there is a conversation in progress, you can happily join in until there is such a long pause between transmisssions that the repeater goes off-air.

> There is also a second reason that I can see
> The 2 meter band in europe is from 144.000 to 145.999 mhz and this
> rig will have an out of band TX over there and could make this rig
> completely illegal in some countries

Good idea, but not true anywhere in Europe. As in the US there is no type-approval for equipment used on the ham bands. That's why we all take those exams, remember? Now in Singapore and other Nanny states this situation is different.

Going back to the start of this thread, I suggest that the original questioner met an unusually experienced Radio Shack sales person. Perhaps he had previously had to deal with a dissatisfied customer or maybe he was himself a licensed amateur and so knew enough to warn someone with an apparently foreign accent that there were issues in transporting rigs from country to country. Nothing to do with embargoes on strategic exports, I am sure. Let's face it, the rig comes in from Korea so going abroad will not be its first taste of foreign travel!

4940. Summary: Shops in NYC and Boston

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-30 12:23:27 UTC
From: jukka@clinet.fi
Message-ID: <jukka.780927532@clinet.fi>
Source record: 259318

I got many replies for my inquiry about ham shops in NYC and Boston area.
Thank's for you all! Here's the summary:

New York's best ham shop is Ham Radio Outlet, Los Angeles, Ca.

There is one shop in Manhattan, but they are "A bunch of slimeballs". (I
don't know exactly what this means, it's not explained in my english book.
Maybe an expression used typically by local tribesmen? ;-)

In Boston, the situation is quite similar, there's no real ham shops around
there.
Near Boston are:
Active Electronics, Woburn
You-Do-It Electronics, Needham
Ham Radio Outlet, Salem, NH

---------------Cut Here-----------------

DESCRIPTION OF THE 'DIALS' ARCHIVE OF POSTSCRIPT FILES

* *
FILE: dials.readme

The files in this directory are a series of various types of radio
dial plates and dial decals that are useful to the home constructor.
These designs are copyright by Robert D. Keys, NA4G. Permission to
use these for any non-commercial amateur radio or antique radio
purpose is expressly given by the author.

The file collins2.ps is a replacement dial decal for the Collins
R-388/51J type radio receivers. Many of these receivers have very
poor dial drum decals that have flaked away with age. This replacement
dial drum decal can be very easily installed over the original, and it
will not affect the original in any way, if care is taken in the
installation process. To use, affix the top end of the replacement
dial drum decal over the original, careflully aligning it over the
original, as closely as possible, with a small piece of clear mylar
tape, at the sides. Wind the replacement dial drum decal over the
original and affix the bottom end with a long strip of clear mylar
tape. To remove, just carefully cut the tape and the replacement
dial drum decal will roll off. The original Collins dial drum decal
was black and red. My replacement decal is just black, and the type
font style is slightly different from the original. But, it is a
very close match at all the alignment points. The original dial

drum decals are very hard to find, but this replacement is very
nice in appearance, and looks just fine, installed.

The file dials.ps is an assemblage of various kinds of dial decals
and dial plates that I have used over the years. If you find any
of value, you are welcome to use them.

The file et8019a.ps is a replacement dial setting logging card for
an RMCA ET-8019A marine HF CW transmitter. It is useful for any
project that requires a dial setting logging card. Cut to suit
and mount.

The file namdial.ps is another assemblage of various kinds of
dial plates that may be useful. If you find any of value, you
are welcome to use them. Cut to suit and mount.

The file round2.ps is a dial plate patterned after the classic
National and Millen rectangular vernier dials. If you have a need
for a half-round vernier dial plate, then this may be what you need.
Cut and mount behind your vernier dial mechanism on the panel.
You will need a pointer of some kind with the vernier, for it to work
properly.

The file scale100.ps is a linear sliderule dial plate for anyone that
has the temerity to put together an old-fashioned '40s vintage type
sliderule dial mechanism. Xerox it up or down in size, to suit, and
mount on the panel under the sliderule pointer.

Most of these smaller decals or plates can be mounted to a panel with
double stick clear mylar adhesive tape. If you can xerox them onto
two-wide mailing labels, that can also be made to work quite well.
Alternatively, a dab of superglue or spray contact adhesive will also
work quite well. The larger decals or plates can be cut out and
mounted to a panel with screws at the locations of the dot screw holes.

Enjoy....

Visit an ARRL-sponsored convention, and you will probably find that
there is on the agenda a "Wouff-Hong" initiation scheduled for Midnight
on one of the days the convention is in progress. Attend the initiation
and learn the secret of why the Wouff-Hong exists and its purpose. At
the conclusion of the ceremony, you will be given a nice certificate,
suitable for framing, which designates you as a member in the Royal
Order of the Wouff-Hong (R.O.W.H.)

More than that, I cannot say.....

I am quickly getting fed up with HF. It seems bandwidth is eaten up by nets, contests, or folks just ragchewing on and on and not letting anyone else get a word in. I am talking specifically about 7245 and 3870 mHz. These folks seem to want to muscle out everyone by using amps when they proably don't need them. Don't FCC regulations require use of the minimum amount of power to maintain communications?
A lot of the fun of HF seems to be going away beacuse of numerous nets and contests.

: >Gee, this one looks easy. Apparently, transmitting antennae (_designed_ for
: >transmitting, i.e. low SWR) are OK. Also, since your station is not intended

: This is NOT correct. Any judge I know would laugh you out of the courtroom,
: or maybe fine you and your attorney for wasting the court's time. The intent
: of the provision is clear, little loopholes are not respected in real
: courtrooms I have visited (though if you believe that the media always gets
: its facts straight, you would have a different picture :-)
: Again, nonsense. Complete nonsense as far as real life attorneys and
: judges that I have met. Your point about money for them is well taken,
: however, you had better have a good argument if you are about to take
: the time, money and effort to invest in such a thing. I wouldn't take
: this direction suggested, it is a waste of time.
: Again, please make "reasonable" interpretations and statements when you
: represent ham radio to people who don't know us. These silly attempts
: to use technicalities, if used in public, will put all of ham radio in
: a very bad light as far as the public is concerned. We need mature,
: reasoned approaches to the problems that face us.

So there's no room for a pooly written rule to be challenged where the intend
is _not_ so clear? My reading of that rule's intent is to preclude antennas
that challenge cable's monopoly, _not_ limit other radio services (such as
cellular phones, ham radio, etc.) I think a well reasoned challenge to this
rule would be a boost to hams and possibly the community by showing how hams
can help out in times of emergency. My neighbors know who to come to when
they've got loved ones they want to contact in a disaster area!!!

>modulator that makes them heavy and bulky. As you note, there are
>ways around that. FM rigs by constrast are simple and compact, basically
>a CW rig with a low level audio stage FMing the carrier oscillator.

big plate modulator?

some specs from my copy of Collins Pro Line II Comm/Nav/Pulse System
instruction book, 3rd edition 1st revision (1986..or so..but things shouldn't
have changed that much...)

Collins VHF-21( )/22( ) VHF Comm:
size 3/8 ATR short dwarf
height 85.3 mm
width 95.3 mm
length 355.6 mm
weight 2 kg
power consumption
receive: 14 W (0.5 A @ 27.5 V dc)
transmit: 165 W (6.0 A @ 27.5 V dc)
transmitter
output 16 W minimum into 52 ohms resistive
modulation - 85% with less than 15% distortion; 95% limiting

modulator is an audio compressor, a comparator, and a switching amplifier with
low-pass filtering of the output. output from the compressor is applied
through a modulation depth control to the comparator where it's superimposed
on the dc bias voltage supplied by the power control. the dc signal is
compared to a 106.7 kHz triangle wave signal to make a 4.5 V p-p 106.7 kHz
pulse-width modulated signal.

the output of the comparator goes to the switching amplifier and output is a
25 V p-p pulse-width modulated signal that's low-pass filtered resulting in an
average modulated DC required by the RF power amplifiers.

the transmitter is a four-stage device. the driver collector recieves power
from the modulator and the +16 V power supply and the final amplifier gets all
of its power from the modulator. looking at the schematic there's not much
iron in the beast at all...

not too bad -- some iron in the collector rf chokes in the transmitter...

Well, maybe not from Texas Towers but there is a neighbor down there at Johnson Space Center that comes pretty close - 1,000,000 feet works out to about 189 miles (or 164 nautical miles which is the preferred unit, I believe) and that is in the ballpark of a typical space shuttle orbit. Now if we can just figure out how to get them to park that thing in the right place...

minimum
> amount of power to maintain communications?
> A lot of the fun of HF seems to be going away beacuse of numerous nets
> and contests.

I have a theory that this state which by the way is also true of
VHF comes from the fact that many Hams are insecure and don't want
to talk with people they don't know. By having lots of nets the same
people crop up again and again and a comfort level builds. If you ragchew
with the same person(s) then once again you don't have to worry about
talking to strangers. In contests generally nothing important is said
anyway except for the obligatory RST, RIG, QTH, QST info so no one
has to be uncomfortable with making conversations with strangers other
than the ritual exchange to substantiate a contact. It seems a strange
things for "supposed" communicators but maybe the growing insularity of
modern western culture is what drives it.

I'm sure lots of you have had the experience of getting on a repeater
in an area outside of your usual stomping grounds and indicated that you
were prepared to "communicate". Nobody answered you; however, not 30sec
after you gave up one ham called another specific ham and they began a
long conversation. I had it happen on a repeater in Ohio when I called
to get help on directions -- just dead air in response. However, 20sec
later
two hams in the area began their discussions of some topic.

Don't think any of this is going to change much. One can either except
the situation and work with those Hams who are prepared to deal with
newcomers or get out of the hobby. I've been doing the first but given
the amount of time I spend on the air last month about 1min; I'm starting
to lead to the second.

4965. Voltage Conversion: USA to France

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-30 16:36:38 UTC
From: jimr@tamri.com
Message-ID: <jimr-300994094142@192.65.214.140>
Source record: 259252

A friend is moving to France! He has a lot of Audio and video equipment. He realizes the TV's won't work there so they are being left behind. I believe they use 220 v there and I think they are on a 50 Hz power cycle.

The question is, where does one get power converters which will do the job? Any info is much appreciated.

I thank you, he thanks you.

You gotta get it from ***Yaesu***! I made the same search a few weeks ago
and couldn't find it. I had the cigarette lighter adaptor so I got a
little project box and a cigarette lighter I mounted the adaptor in the
box and hooked it up to my hf rigs power supply Work's great!

Been that way for, uh, lessee, 23 years that I know of.....

The old geezers ragchew nets I mean. The ones with the looong pauses
for static crashes to be appreciated be all :-)

Contests seem to be an '80's thing. I find them annoying too but
complaining won't change them.

I've had more fun on HF since I've learned CW at 20+ WPM. I gave up on
SSB about the time I started it 23 years ago. Couldn't put up
big beams or afford high power at age 14.

Some things don't change much I guess.

>/\
>\ Bill Splaine E-MAIL > bsplaine@sr.hp.com /

I've used an FT-5200 in my Jeep for over a year and LOVE it! Its small size and detachable front panel
make it a real winner. The 14 memories per band are more than adequate for my application.

I've also used the radio on packet where it performed flawlessly. With its "extended" recieve coverage
it also doubles as a scanner, eliminating the need for another radio in the mobile. With the search/scan
controls on the DTMF mike, use while mobile quickly becomes second nature. The "crossband repeat"
is also a nice feature. The instruction book is quite complete, and includes all schematics.

Hope this helps in your decission.

All of the options you mentioned are not practical and may be
in violation of FCC rules.

In my opinion, you would still be better off with a celluar phone.
Some of the cell phone companies offer a service that will forward
your call to the cellphone if you do not answer you home phone and
also forward your cellphone to your home if you do not answer it
after a predetermined amount of rings.

I have a Tropez 900Mhz cordless phone and it's range is about 1/2 mile
for a full quieting noise free signal. It's by far the best of the
units I have checked out and it includes digital encryption.

Best regards-

-steve

Well, let's say someone did not have a ham license. I also doubt
Radio Shack as a company has a ham license. So, what you have is
an HT sitting on a counter, owned at that point by a license-less
Radio Shack. So far, no violation. Now, if someone waltzes
in who does not have a ham license, and keys the HT, who is
in violation? I think the license-less customer is, since they
are transmitting in the ham band without a licence, but, the
radio is owned by RS. Now, if I waltz in being a licensed
Tech ham, and key the mike, there is presumably no violation
by either party.

Perhaps there is an FCC rule however, that says Ham retailers
have to keep their transmitting ham equipment under watchful eye and
away from the general public's grasp, and perhaps also should
verify that the customer is a licensed ham.

My guess is that in the case of the licensed ham keying the
HT, there was strictly speaking no FCC violation, but certainly
perhaps an RS company policy violation.

Leaving live Ham equipment out on display within grasp like that
probably gets RS employees fired.

I also walked into a local RS once and saw their 2M HT sitting
on a display next to the battery operated fuzzy dog. I
was able to turn it on, as I recall, but did not key the thing.

>Don't need many memories... ~20/band would be more than enough....

5200 only has 14 per band, plus a couple of extras for scan limits.

I like my 5200 in general, but there are a couple of things about it that bug me.

1) Can't monitor 146.52 and 446.00 at the same time. This receive combination generates a false signal in one or the other (don't remember which one).

2) Tone squelch sometimes breaks momentarily when a signal without the tone on it is received. Aggravating when you're using tone squelch to prevent feedback when your two frequencies are harmonically related.

3) Horribly weak audio output. This will be a serious problem on a motorcycle unless you are planning on using earphones or an external audio amp.

4) Very limited control from the mike. The only controls (other than the tone pad, which cannot be used for direct frequency selection) are memory/vfo and up/down. To be fair, I don't know if other dual-banders are any better in this respect. I understand there's a wireless mike available that gives you more control features, but I've heard this doesn't work very well.

ABSTRACT

It was the end of a long and bountiful watch at the key.
Some had called it the end of an era. To others, it was
merely the changing of the watch or the progress of
technology. As of 1 August, 1993, the U.S. Coast Guard
officially closed down all medium frequency (MF, 600-700
meter or 405-525khz) continuous wave (CW) radiotelegraphy

operations, worldwide. This cessation of MF CW operations did indeed mark the end of a 92 year use of these frequencies by the U.S. Coast Guard. This article describes a narrative story around that cessation of MF CW operations, and includes copy of the final broadcast to mariners on that frequency. As of 1 September, 1993, the Canadian Navy stations, including CFH ceased all Morse code services. Also included is a narrative concerning the cessation of CW operations at CFH. Some historical notes of a trip by N4IQA, W0UCE, WD4UYJ and NA4G to the USCG CAMSLANT/NMN Chesapeake, VA station regarding the cessation are included.

The author would like to acknowledge the kind cooperation of the United States Coast Guard, CAMSLANT, NMN, Chesapeake, VA, especially RM3 Sergio Morales, and the many others on watch that day. On the behalf of those four who were there, the amateur radio fraternity in general, those whose lives have plied the high seas throughout the world, and especially those whose lives have been directly influenced by your dedicated service over the years, I say Thank You!

This humble work, I therefore dedicate, to all you men and women of the United States Coast Guard, present and past or silent key, and especially to those of you who have sparked your sparks, arced your arcs, sent strong and clear signals over the ether, kept a fine-tuned ear deftly probing the crackle and din on 600 meters, and pounded a mighty fine brass on a long and bountiful 92 year watch at the key.

Robert D. Keys, NA4G
Raleigh, NC,
25 September, 1994.

|> a CW rig with a low level audio stage FMing the carrier oscillator.

TODAY, FM rigs are simpler to construct. Back when radios were first being installed into airplanes FM was much more complex. Not so much on the transmit side, but rather the receiver. These days you can buy a complete IF strip with a phase discriminator/detector on one chip. In the 1930's and 1940's you were consigned to a large rack of vaccum tubes! AM detectors , by contrast, are usually simple rectifiers - a one or two tube affair at most.

As for converting to FM today... I think it is simple economics. We are out of VHF spectrum space to allow the AM and FM systems to exist side-by-side for transition, and to try to get EVERYONE to switch at once would never fly.

Disclaimer: FM was invented my a gentleman named Armstrong sometime in the '30s or '40s, but I can't remember the exact dates, but it was well after radios were in common use in aircraft. IMO: Modern AM transceivers are still pretty good, and the gain by converting to FM would be small.

> WA3JPG

Expanding on the mobile antenna theme ...

Installing a Texas Bugcatcher (a BIG mobile antenna) on your car, and running coax into your ham shack probably isn't a bad idea. It should be perfectly legal from a CC&R viewpoint, and it gives you some negotiating power: Wouldn't the neighbors rather "see" a discrete trap vertical, hidden in the trees and bushes in the backyard, or, would they rather continue to see the Texas Bugcatcher parked out front ?

Another point that I haven't seen this time around: About a year ago, the State of Washington passed a law that CC&R's could not be enforced against objects that were not visible from outside of your own property. This law was the direct result of a satellite dish owner being sued by a homeowners association, even though the satellite dish could not be seen from any other property.

We have got to show these anti-antenna people that there are worse things than living next door to a ham !

Note: As a serious contester, this is not my preference. I long for the good old days of the 1950's and 1960's when you could put up 60' of tower and a tribander on a suburban lot, and no one would blink an eye.

By the way, it would be really nice if one of you knowledgeable people, like WA3JPG or KA6S would write up a "Ham Antenna FAQ" explaining PRB-1, CC&R's, etc. Just posting it once every month would save lots of bandwidth whenever this issue resurfaces.

Find yourself a VCR with a junk tape transport and use the RF circuits in
it to get from ch. 3 to NTSC. If you use a cable-compatible one, you might
be able to dispense with your down-converter, depending on what ATV
frequency you're using.

I picked up a "junk" VCR at a hamfest a couple years ago for $10, intending
to strip it for the RF circuits. Turns out it bascially works, so I haven't
been able to bring myself to tear it apart yet. Guess I'll have to look
for a cheaper one to get a real junker!

4979. RadioMap service expands into OH, PA, MO (and IL, IN, MI, NY, WI)

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-30 18:51:12 UTC
From: jejesson@amoco.com
Message-ID: <1994Sep30.141651.28628@amoco.com>
Source record: 259302
Cross-posted to: rec.radio.swap,rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.misc,sci.electronics.repair

Having a color map of most of the local transmitters is truly wonderful! Driving by antennas for years made me curious as to the frequency and the ownership. For example, I now know who owns the huge towers a few miles from my house (AT&T) and what frequency is used. Also, as I am interested in pager technology, I have quickly identified the Skytel transmitter locations!

This is now possible (much easier then digging through multiple databases) through Bob Parnass' RadioMap(tm) service. Knowing Bob and respecting his radio knowledge, I quickly sent him a check and asked him to identify transmitters in my immediate area. He looks at the density of transmitters and determines the overall radius (for the Chicago loop area, he can only diagram a small radius due to the density while a rural area he can expand the radius to 10 miles or so) and plots the output. He returned a nice map with a linear list of transmitters within a week.

Overall, the RadioMap is a good deal and now I KNOW (instead of guessing) where the transmitters are!

Specifics: RadioMap(tm), Bob Parnass, 2350 Douglas Road, Oswego, Illinois, 60543-9794, $19.95

(I have no affiliation with the RadioMap(tm) product, just a pleased customer)

4980. Re: What does all call signs have been issued?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-30 18:54:59 UTC
From: snoonan@netcom.com
Message-ID: <snoonanCwyHvn.Kon@netcom.com>
Source record: 259231

Thanks for all of the response on this question. Nice to see that there is a large group of people interested in this subject.

It just seems strange to me that the if the FCC used up all of the tech/gen class call signs, then they should report what call sign they are up to, even if its in a different class. It would be less confusing than stating that there arn't any left.

Thanks Again,

Sam

* DP3MIR ACTIVE ABOARD MIR SOON *
==================================
German Astronaut Dr. Ulf Merbold will be QRV aboard the space station MIR signing DP3MIR during the ESA EUROMIR 94 mission starting 03-OCT-1994. In order to give actual information regarding the mission to as many radio amateurs and SWLs as possible, he will use the digital voice memory of MIR's ham radio equipment designed and built by Thomas Kieselbach, DL2MDE. Thomas made an arrangement with Ulf Merbold, DP3MIR, to load actual spoken reports into the digital memory frequently, as time permits however, probably every 2-3 days. The reports in English and German will then be retransmitted automatically during the consecutive orbits on 145.550 MHz FM in regular time intervals. Ulf Merbold will stay aboard MIR for 30 days.

* INTERNATIONAL SYMPOSIUM *
==========
The SpaceOps '94 International Symposium sponsored by the NASA/Goddard Space Flight Center (GSFC) will be held on November 15-18, 1994 at the Greenbelt Marriott Hotel in Greenbelt, Maryland.

The theme for the SpaceOps '94 is opportunities in ground data systems for high efficiency operations of space missions. Of special interest are techniques leading to improved system productivity, effectiveness, and efficiency; trade-offs between mission requirements and end-to-end system architectures; and new technologies and techniques for systems suited to future space missions.

The SpaceOps '94 will serve as a vehicle for communicating results and plans concerning present and future operations of space missions and ground systems. It generally attracts 400 specialists from many countries who take this opportunity to share their experience and knowledge with others engaged in similar activities.

* AO-21 NEWS *
==========
Satellite controllers recently noticed a significant event on AO-21. There have been 51 multi-bit errors in the RAMDISK where the actual WEFAX test image is stored. In addition, temporary bit errors in the EPROM that is used for testing purposes were found in the RAMDISK as well. At about the same time, operations at the host spacecraft resulted in a temperature increase of about 6 degrees C. Fortunately the program running in the RTX computer had been continuing to operate smoothly. Users could only notice that the FAX picture had been automatically replaced by telemetry in the schedule.

In order to find out what really happened, controllers are looking for copies of the AFSK Packet Telemetry of RUDAK II transmitted from 15-Sep-94 to 18-Sep-94. Copies should be sent:

- via PACKET to Robert: DD4YR @DB0AAB.#BAY.DEU.EU
- or via INTERNET to Peter : db2os@amsat.org

I have the Tropez too. Occasionally, it doesn't ring and I'll hear my
answering machine going. I don't know for SURE that the phone is at
fault. Also, several folks I've talked to say the range is better on
other 900 phones such as the ATT and the Uniden. Just the other day at
Circuit City, the salesman said the Uniden 9100 had been taken off the
shelves because too many customers have brought them back with complaints.
I tried one in the store and found an unacceptable echo or "down in a
barrel" sound. Anyway, I;m happy with the Tropez for the $189 price tag
but it does have a constant hiss and the range polling feature eats up
battery life if the unit is left off the cradle overnight.

: I am brand new to ham radio and yesterday in a RS when I asked aboout
: their sale on the HT202, the salesman asked me if I intended to take it
: out of the country. (I happened to be with a french friend whose accent
: was obvious.) I am not going, unfortunately, out of the country!
: can anyone enlighten me as to why this is `illegal'?
: thanks

: patrick

: ps. can you also recommend a book/magazine that I can buy to start
: learning about amateur radio. (e.g., is 2-m the `best' for me, 440?,
: what can i do with the new Technician license, etc.)

Believe it or not, the Radio Shack "Now you're talking..." $17 book is
pretty nice. My girlfriend is currently using it, and seems pleased with
it.
As far as the HT in France, I can't think of a technical reason for it
to be _illegal_, but there are reasons for it to be _useless_. Some
European countries use a 1750 Hz tone to open repeaters. Their split and
or inputs/outputs may not coincide with ours, so an HT that'll 'automatically'
chooses the split or won't transmit FM below 144.5 or so would be of limited
use. As far as legal-ese, France may have laws governing type acceptance,
out of band capability, etc. 2m in France may be only 146-148 or 144-146
(remember they used ham freqs at the olympics - b*stards!). Check with the
ARRL regarding recip op and equipment standards - they'll be glad to give
you the answer, I bet.

: I have been building a qrp rig and was wondering
: about how to wind the toroids. If you need, say,
: 12 turns, what are the differences between
: bunching the windings together tightly or evenly
: spacing them out. ...

If it's a high-permeability core, it doesn't make very much difference whether the windings are tightly-spaced or spread out, although you will tend to get a little higher inductance with tight spacing. In fact, that's one way of making small adjustments in inductance, by spreading or compressing the turns.

With spread-out turns, coil Q will generally be slightly higher and distributed capacitance lower, so space-winding is generally preferred.

Greater than 2 MeV Electron Fluence for 29 SEP is: 3.8E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. Three weak optically
uncorrelated B-class events were reported this period. The
largest of these was a B4 occurring at 29/0132UT. Region 7782
rotated around the limb. No other significant changes noted.

Solar activity forecast: solar activity is expected to be
very low.

STD: Yohkoh x-ray imagery indicates another active region is
approaching the east limb. It does not appear to be very

large.

The geomagnetic field has been at quiet to unsettled
levels for the past 24 hours. The greater than 2 MeV energetic
electron flux has been mostly moderate for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled for the next three days.

Event probabilities 30 sep-02 oct

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 30 sep-02 oct

A. Middle Latitudes

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>can help out in times of emergency. My neighbors know who to come to when
>they've got loved ones they want to contact in a disaster area!!!

Just a quick note of response. Of course there is room to challenge a
POORLY written rule. This one is not poorly written in my humble legal
opinion. If you hired me to look at it, I would tell you not to waste
your $10,000 in legal fees because your chances of beating it are
slim to none. I would challenge you that you need to read your own
contracts before signing, and that reading this rule clearly bans
outside antennas, regardless of your personal definition of the words
in the rule. The point is that the "legal" definition of what is
said there is important, not the ham radio "technical" one. This just
doesn't fly in the Courts I visit.

Your point about hams helping in an emergency is near and dear to a lot
of ham's hearts. Realistically though, it is NOT important to a majority
of non hams I run into. I make presentations to townspeople for
antenna permits, and when I mention the hams helping in an emergency,
most of them laugh. It is embarassing. The non ham often thinks that
cell phones and the local town have it all together just fine, and there
is no need for these hams to help out. There is no arguing with a lot
of these folks, they just won't listen. This sort of attitude is
changeable, possibly, by ALL of us working a little at a time to show
the non hams that ham radio is of great use in an emergency and that
hams are generally very good neighbors.

SB PROP @ ARL $ARLP040
ARLP040 Propagation de KT7H

ZCZC AP54
QST de W1AW
Propagation Forecast Bulletin 40 ARLP040
From Tad Cook, KT7H
Seattle, WA September 30, 1994
To all radio amateurs

SB PROP ARL ARLP040
ARLP040 Propagation de KT7H

Average solar flux was up by only a few points last week.
Geomagnetic indices have also risen a bit, signaling some
instability. Very low levels of solar activity should continue,
with a recurring coronal hole causing active geomagnetic conditions
around October 4 or 5. Solar flux should rise to about 85 after the
first of the month, and then drop back to around 70 by October 17.

Sunspot Numbers for September 22 through 28 were 15, 17, 20, 35, 43,
36 and 35, with a mean of 28.7. 10.7 cm flux was 70.7, 71.4, 72.8,
76.2, 77, 74.7 and 74, with a mean of 73.8.

The path projection for this week is from Togo (5V) and Norfolk,
Virginia.

80 meters looks good from 2230 to 0600z, peaking around 0030 to
0500. 40 meters should be open from 2130 to 0700, and 30 meters
from 2030 to 0400, with 30 meters open as late as 0700 on many days.
20 meters should be open from 1700 to 0000, peaking toward the end
of the period. Check 17 meters from 1330 to 2200, and 15 meters
from 1500 to 2000. 12 meters may be open on some days from 1530 to
2000. 10 meters does not look promising, but on rare occasions it
may be open some time between 1500 and 2100.

ARLB076 New ITU Radiocommunication Director

ZCZC AG41
QST de W1AW
ARRL Bulletin 76 ARLB076
From ARRL Headquarters
Newington CT September 30, 1994
To all radio amateurs

SB QST ARL ARLB076
ARLB076 New ITU Radiocommunication Director

At the ITU Plenipotentiary Conference in Kyoto, Japan, on September 30, the International Telecommunication Union elected Canadian radio amateur Robert W. Jones, VE3CTM, to replace retiring Richard C. Kirby, W0LCT, as Director of its Radiocommunication Bureau.

Jones, 50, of Ottawa, is currently the Director General of the Radio Regulatory Branch, under Industry and Science Canada, which regulates amateur and other radio services. His work with the ITU began in 1975 in preparation for the 1977 and 1979 World Administrative Radio Conferences. From 1981 to 1983 he was director of a project to automate ITU frequency records. He has since served and headed Canadian delegations to numerous ITU conferences and working groups. He holds Master of Applied Science and Master of Business Administration degrees, and attributes his professional interest in radiocommunication to having become a licensed radio amateur as a teenager in 1959.

TJ1JR Randy Jones arrived in Cameroon in July and will by active for the next four years. I am his QSL manager. We meet weekly on the air to exchange log info, and after we are done, he has indicated that he is willing to stay on freq for 15-30 mins and work a few stations to give them a new one. If you are interested in receiving updates via Internet as to when and what freq he will be on, send me your Internet address and ask that you be added to my update mailing list for TJ1JR. Last week we were able to put through about 35 stations, so if you don't get through at first, don't worry. He will be on weekly.

Ham Radio & More Station List:
The following list can change often....

Alabama: WHRT, 860am, Hartselle
WAJF, 1490am, Decateur
Arizona: KFNN, 1510am, Phoenix
Colorado: KBCO, 1190am, Denver/Boulder
Conneticut: WATR, 1320am, Hartford
Illinois: WKTA, 1330am, Chicago
WBGZ, 1570am, Alton
Indiana: WPDJ, 1300am, Huntington/Ft. Wayne
Kentucky: WMTA, 1380am, Central City
Massach: WSSH, 1510am, Boston (50,000 watts)
WKPE, 1170am, Orleans
Missouri: WBGZ, 1570am, St. Louis
N. Carolina:WEEB, 990am, Fayetteville
WCRY, 1460am, Raleigh/Durham
WNCT, 1070am, Greenville
Nebraska: KICS, 1550am, Lincoln
Oklahoma: KTMC, 1400am, Mcalester
Utah: K26DI, channel 26 tv, Castledale

Ham Radio & More is on the Talk America Network. It is aired live every Sunday at 6:00pm EST, originating from Phoenix, Arizona. It can be heard via TVRO satellite on Spacenet 3, Transponder 9, 6.8 audio. Our toll free listener call-in line is 1-800-298-TALK. The originating station number is 1-602-241-1510 for more information. Any radio station can air the show FREE OF CHARGE.

4997. Re: Radio Shack Violation

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-30 22:10:00 UTC
From: n5ljv@uh.edu
Message-ID: <30SEP199417102389@elroy.uh.edu>
Source record: 259308

My radio shack keeps the ham HT's behind the counter. On one occasion I asked the manager (well, rather quized him) about their policies on the ham radio equipment. These were basically the questions I asked, and the answers he gave:

Brad: Do you know what ham radio is?
Manager: Yes.

Brad: If someone wanted to transmit with the ham equipment, would you ask to see their license?
Manager: Yes.

Brad: Would you recognize a ham license if you requested to see it?
Manager: No. I've never seen one.

Brad: Are you aware that their is one class of license that is not authorized to transmit with your HT radios?
Manager: No.

Brad: Have you been briefed by your superior(s) on policies concerning ham radio equipment that you sell?
Manager: Yes.

Brad: What did they tell you?
Manager: It's ok to sell it to anyone, but remind them to read the advisory that comes with the radio.

Brad: What does the advisory say? Have you ever read it?
Manager: No, I have not read it. But I think it tells the customer not to transmit on this radio without a proper license.

Brad: How many radios have you sold?
Manager: I'v personally sold 4, the store has sold about 15, I think.

Well, what do you conclude about our conversation? I think that upper and middle Radio Shack management are aware of policies and are instructed to make sure that Store Managers know the policies, but most store managers are probably in the dark about what they are actually selling.

I think it might be a good idea that the TX STOP function come ENABLED from the factory. Then, the customer should learn how to DISABLE it before they can talk on the radio. What do you think?

We also have to keep in mind that Radio Shack, in a nut shell, is not too much different than other ham stores. I've walked into ham stores before and have keyed microphones without the sales person asking to see a license ... go figure.

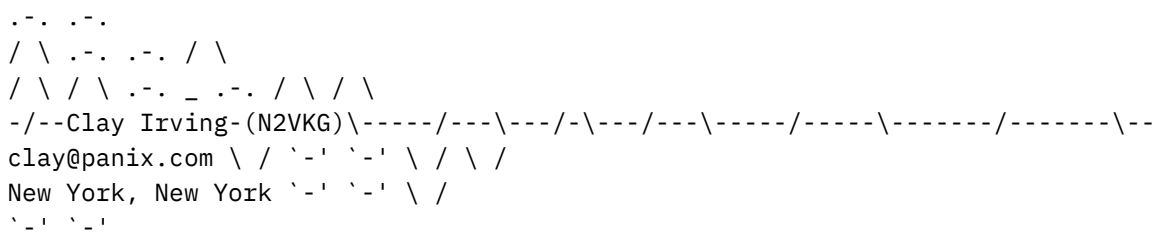
>I got many replies for my inquiry about ham shops in NYC and Boston area.
>Thank's for you all! Here's the summary:
>
>New York's best ham shop is Ham Radio Outlet, Los Angeles, Ca.

I'd have to disagree. Certainly, Manhattan's best ham shop is Ham Radio
Outlet, Salem, NH! These guys aren't only nice, they're knowledgeable
and helpful. I've had them call me back after placing an order just to
tell me that one item is backordered...



4999. IPS Daily Report - 30 September 94

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-30 23:25:43 UTC
From: rwc@flare.syd.ips.oz.au

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 30/2330Z SEPTEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 30 SEPTEMBER AND FORECAST FOR 01 OCTOBER - 03 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 29 Sep
Daily Proton Fluence >1 MeV: 2.2E+05
Daily Proton Fluence >10 MeV: 1.4E+04
Daily Electron Fluence >2 MeV: 3.8E+07 (normal)
X-ray background: A2.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
01 Oct 02 Oct 03 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 01 Oct: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 29 Sep
Learmonth 4 2122 1111
Fredericksburg 5 7
Planetary 5 7

Observed Kp for 29 Sep: 2232 1111
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
01 Oct 8 Quiet
02 Oct 8 Quiet
03 Oct 8 Quiet to unsettled
COMMENT: Minor storm levels are expected 4-5 October due to coronal
hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
30 Sep normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Oct normal normal fair
02 Oct normal normal fair
03 Oct normal normal fair
COMMENT: HF Comms are expected to be degraded during interval 5-6
October, particularly at high lats.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
30 Sep 25 near predicted monthly values

Predicted Monthly T-index for September: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
01 Oct 25 Near predicted monthly values
02 Oct 25 Near predicted monthly values
03 Oct 25 Near predicted monthly values
COMMENT: Degraded HF comms expected 5-6 October due to anticipated
coronal hole induced disturbance. Ionospheric response to anticipated
magnetic activity may be stronger during this rotation due to change
of season.
